Chapter 1 Geoelectromagnetic Fields

1.1	Morphology of the Earth's Electromagnetic Field	1
1.2	Atmospheric Electricity	7
1.3	Conductivity of the Ionosphere	13
1.4	Formation of the Magnetosphere	16
1.5	Magnetospheric Waves and Their Propagation to the Earth	21
1.6	Conclusions	25

Chapter 2 Elements of the Theory of Electromagnetic Fields

2.1	Fundamental Relations	27
2.2	Electromagnetic Fields in the Spherically Symmetric (and Horizontally Layered) Earth	34
2.3	Impedance and Other Interpretation Parameters (Response Functions)	39
2.3.1	The Spectral Impedance	39
2.3.2	Units of Measurement for the Magnetic Field and Impedance	40
2.3.3	The Effective Depth and the Frequency Sounding Condition (FSC)	41
2.3.4	Magnetic Ratio, Q , ρ_a	43
2.3.5	Response Functions of the Layered Earth	45
2.4	Modeling of Geoelectric Fields	49
2.4.1	Horizontally Layered Models (Spherical- and Plane- Layered Media)	49
2.4.2	Two- and Three-Dimensional Models	52
2.4.3	Inhomogeneous Surface Thin Layer Model	55
2.5	Conclusions	58

Chapter 3 The Inverse Problem

3.1	Formulation of Inverse Problems	60
3.1.1	Experimental Data	61

3.1.2	The Model of the Sought Object	61
3.1.3	Theoretical Field f of the Model Object	62
3.1.4	Formulation of the Inverse Problem. The Theorem of Uniqueness	62
3.1.5	Properly and Improperly Posed Problems	63
3.1.6	Methods of Solving the Inverse Problem	64
3.2	Solving Procedures of the Trial-and-Error Method	64
3.2.1	The Monte-Carlo and Hedgehog Procedures	65
3.2.2	Linearization of the Inverse Problem. Matrix of Derivatives with Respect to Parameters	67
3.2.3	Generalized Theory for Solving Linearized Inverse Problems	69
3.3	Improperly Posed Problems and Their Regularization	71
3.4	The Information-Statistical Approach	75
3.4.1	Fundamentals	76
3.4.2	Effectiveness of the Solution	78
3.4.3	Illustrative Study on the Interpretation Effectiveness for MTS Curves	79
3.4.4	The Joint Interpretation of the MTS and Global Sounding Data.	81
3.5	Direct Inversion. Properties of Response Functions	83
3.5.1	Analytical Properties of the Response Function	84
3.5.2	Dispersion Relations	85
3.5.3	Inequalities Governing the Response Function	87
3.5.4	Correction of the Observation Data into the Domain of Definition of Operator A^{-1}	89
3.6	Approximate Euristic Methods of Inversion	90
3.7	Amplitude-Phase Layer-by-Layer Interpretation	93
3.8	Nonuniqueness of the Inverse Problem and the Resolving Power of Data	95
3.8.1	The Essence of the Nonuniqueness of the Inverse Problem	95
3.8.2	Resolving Power of Accurate Data	96
3.8.3	The Resolving Power of the Data Measured with Errors	98
3.8.4	Calculation of the Fréchet Derivative	99
3.8.5	Resolving Power of Global GDS Data	100
3.9	Conclusions	102

Chapter 4 Global and Regional Geomagnetic Deep Sounding

4.1	General.	106
4.2	Geomagnetic Variations Described by Harmonic $P_1^0(\cos \theta) = \cos \theta$	109
4.2.1	Aperiodic Dst Variation	109
4.2.2	Harmonic Analysis of the Dst Variation of Individual Storms	112
4.2.3	Continuum	115
4.2.4	Twenty-Seven-Day Variation Harmonics	118
4.2.5	Semi-Annual and Annual Variations	119

4.2.6	Eleven-Year Variation	120
4.3	Daily Variations	123
4.4	Global Sounding Curve	147
4.4.1	Data Estimation and Curve Plotting.	147
4.4.2	Differences of Obtained Global GDS Curves from Earlier Ones	150
4.4.3	Error Estimate Problem	150
4.5	Interpretation of Global Sounding Data	153
4.5.1	Interpretation by Schmucker's and Molochnov's Methods	153
4.5.2	The Problem of Electrical Conductivity Jump.	155
4.5.3	Is the Asthenosphere Global?.	157
4.5.4	Models of Most Probable Distribution $\sigma(h)$	158
4.5.5	Attempt to Describe the Set of Possible Solutions of the Inverse Problem of Global GDS	161
4.6	Geothermic Interpretation of Global GDS	165
4.7	Regional, Local, and Point Geomagnetic Deep Soundings	169
4.7.1	Introduction.	169
4.7.2	GDS Using Equatorial and Auroral Electrojet Field	170
4.7.3	Regional GDS's Using Global Source Field	177
4.7.4	Regional Soundings by the Method of Derivatives.	180
4.7.5	Local GDS's	182
4.7.6	GDS in a Point	183
4.8	Conclusions	184

Chapter 5 Magnetotelluric Sounding

5.1	Introduction.	186
5.1.1	MTS Curves over Plane-Layered Structures	186
5.1.2	The Impedance Tensor and the Role of the Source	190
5.1.3	Some Properties of the Impedance Tensor	191
5.2	Data Processing for the Impedance Tensor Determination	193
5.2.1	Spectral Analysis of Time Series	194
5.2.2	Estimating the Impedance Tensor Elements	195
5.2.3	Noise and Ways of Its Removal	197
5.3	Interpretation of the Deep Magnetotelluric Sounding Curves at the Distorting Effect of Surface Lateral Inhomogeneities	201
5.3.1	Fundamentals	201
5.3.2	MTS Modeling on a Layered Model with Circular Inhomogeneities in the Upper Layer. An Example	203
5.3.3	Interpretation of Distorted MTS Curves	206
5.4	Deep MTS Study on Two-Dimensional Structures	209
5.4.1	Principles of Classification of Distortions of MTS Curves	209
5.4.2	B-Polarization	210
5.4.3	E-Polarization	215
5.4.4	Comparison of Transverse and Longitudinal Curves.	219

5.5	Distorting Effects on Three-Dimensional Structures	220
5.5.1	Concentration and Rarefaction (Deconcentration) of Currents. Channeling and Flow-Around of Inhomogeneities	220
5.5.2	Induction Distortions	223
5.5.3	Superchanneling	224
5.6	The MTS in Elongated Depressions	226
5.6.1	The MTS in the Rhine Graben	226
5.6.2	MTS in the Dnieper-Donets Depression (DDD)	229
5.6.3	MTS in Foredeeps	233
5.7	MTS in Shields and Basement Escarpments	234
5.7.1	Review of MTS in Different Crystalline Massives. The Possibility of Normal Curve Determination	235
5.7.2	MTS in the Ukrainian Shield	238
5.8	The Conducting Layers as Derived by MTS	240
5.8.1	The MTS Grouping in the Peri-Baikal Region	241
5.8.2	The Asthenosphere	242
5.9	Conclusions	245

Chapter 6 Magnetic Variation Profiling (MVP)

6.1	Formation of Anomalous MVP Field	247
6.1.1	The Field of a Sphere and a Cylinder	247
6.1.2	Conductive Type Anomalies	249
6.1.3	Eddy-Type Anomalies	251
6.1.4	Comparison of Conductive and Eddy Anomalies	253
6.2	Anomalous Fields over Two-Dimensional Inhomogeneities	256
6.2.1	Surface Anomaly. Insertion	256
6.2.2	Graben	261
6.2.3	Deep Anomaly. Elliptical Cylinder	263
6.2.4	Comparison of Deep and Surface Anomalies	268
6.3	Anomalous Fields on Three-Dimensional Inhomogeneities .	268
6.3.1	Physical Modeling	269
6.3.2	Effect of Body Length on the Anomalous Field	271
6.4	Integral Relations Between the Components of the Anomalous Field.	277
6.5	Observation Data Processing.	280
6.5.1	Anomalous Field Determination Using a Reference Station	281
6.5.2	Profile (Array) Data Processing.	282
6.5.3	Processing of the Point Observation	283
6.5.4	Interpretation of the Induction Vector Pair at a Point . . .	286
6.5.5	New Processing Techniques	288
6.6	Methods of MVP Data Interpretation	290
6.6.1	Two-Dimensionality	290
6.6.2	Surface Anomalies	291
6.6.3	Moments	293
6.6.4	Estimation Techniques for Longitudinal Conductivity G of a Cross-Section of an Anomalous Body	294

6.7	Principles of MVP Data Interpretation	297
6.7.1	Uniqueness Theorem	297
6.7.2	A Practical Example of an Ambiguous MVP Inverse Problem	298
6.7.3	Potentialities of MVP	300
6.8	Joint MVP and MTS Studies of Conductivity Anomalies	301
6.8.1	The MTS-Estimation of G of the Anomaly	302
6.8.2	Analysis of Three-Dimensionality of a Body	304
6.9	Conclusions	306

Chapter 7 Electrical Conductivity Anomalies

7.1	Coast Effect	308
7.2	Anomalies in Western North America	315
7.2.1	Coastal Anomalies	315
7.2.2	Rio-Grande Anomaly	316
7.2.3	South-Western Canada	317
7.2.4	Magnetometer Array Study	319
7.2.5	MTS Results	322
7.2.6	Geophysical Correlations	325
7.3	Crustal Anomalies of the East-European Platform	327
7.3.1	Kirovograd Anomaly	327
7.3.2	Near-Moscow Anomaly	333
7.4	Carpathian Anomaly	336
7.4.1	Geoelectrical Data	336
7.4.2	Geological Interpretation of the Carpathian Electric Conductivity Anomaly Based on the Ideas Developed by Hyndman and Hyndman (1968)	338
7.5	Classification of Electrical Conductivity Anomalies	340
7.5.1	Anomalies Classification According to Geologic Environment	340
7.5.2	Anomalies Classification by Depth with Allowance for Possible Nature	342
7.5.3	Anomalies Classification by Scale	343

Chapter 8 Conclusions

8.1	Geoelectric Model for the Earth's Crust and Mantle Based on the Results of Chapters 3–7	345
8.2	Geoelectric Methods (Fanselau Approach)	346
8.3	Comparison Between the Three Methods	348
8.4	Strategy of Electromagnetic Data Interpretation	349

Appendix	Geomagnetic Observatories of World-wide Network	351
