Foreword by Ernst H. K. Stelzer xvii

Preface xxi

1	Let There be Light Sheet	1
	<i>Pavel Tomančák and Emmanuel G. Reynaud</i>	
1.1	Historical Context of Light Sheet Microscopy – Ultramicroscopy	1
1.2	Light Sheet Imaging Across the Twentieth Century	3
1.3	And here Comes the Flood	3
1.4	The Building of a Community	6
	References	8
2	Illumination in Light Sheet Fluorescence Microscopy	11
	<i>Rory M. Power and Jan Huiskens</i>	
2.1	Introduction	11
2.2	Axial Resolution and Optical Sectioning in Light Sheet Microscopy	13
2.2.1	The Point Spread Function in Fluorescence Microscopy	13
2.2.2	The Point Spread Function in Light Sheet Fluorescence Microscopy	14
2.3	Light Sheet Dimensions	16
2.3.1	Gaussian Optics Description of Beam Focusing (x, z Axes)	18
2.3.2	Methods of Light Sheet Production (y Axis)	20
2.4	Practical Light Sheet Generation	21
2.4.1	Static and Pivoted Light Sheets	21
2.4.2	Scanned Light Sheets	27
2.5	Degradation of the Light Sheet in Tissue	29
2.5.1	Absorption of the Light Sheet in Tissue	29
2.5.2	Refraction of the Light Sheet in Tissue	31
2.5.3	Scattering of the Light Sheet in Tissue	31
2.6	Challenges and Benefits of Light Sheet Modes	32
2.6.1	Parallelization of the Light Sheet	32
2.6.2	Image Artifacts Arising from Light Sheet Illumination	34
2.6.3	Homogeneity of Light Sheet Illumination	35
2.6.4	Robustness and Simplicity of Light Sheet Generation	39
2.6.5	The Merits of Static, Pivoted, and Scanned Light Sheets	39

2.7	Multiphoton Excitation	40
2.7.1	Two-Photon Light Sheets	40
2.7.2	Two-Photon Light Sheet Dimensions	41
2.7.3	Comparison with One-Photon Light Sheet Microscopy	45
2.7.4	Comparison with Laser-Scanning Multiphoton Microscopy	47
2.8	Multi-View Illumination	48
2.9	High-Resolution Imaging	51
2.9.1	Geometric Limitations for High-Resolution Imaging	51
2.9.1.1	Oblique Light Sheets	52
2.9.1.2	Reflected Light Sheets	52
2.9.2	Diffraction Limitations for High-Resolution Imaging	54
2.9.2.1	Bessel Beams	54
2.9.2.2	Axially Swept Beams	59
2.9.2.3	Photophysical Approaches	61
2.10	Conclusions	61
	References	63
3	A Small Guide on How to Mount a Sample in a Light-Sheet Microscope	67
	<i>Francesco Pampaloni, Edward Lachica, Jacques Paysan, and Emmanuel G. Reynaud</i>	
3.1	Introduction	67
3.2	A Few Basic Rules	68
3.2.1	Rule 0 – Don't Panic! Become Enthusiastic!	68
3.2.2	Rule 1 – Keep it Clean	68
3.2.3	Rule 2 – The Light Comes Sideways	69
3.2.4	Rule 3 – The Theory does not Apply to your Sample	71
3.2.5	Rule 4 – Sample Geometry Matters	71
3.2.6	Rule 5 – Know Your System Well	72
3.2.7	Rule 6 – How Does Your Sample Move?	73
3.2.8	Rule 7 – What Was Lost?	73
3.2.9	Rule 8 – Consistency is Key	74
3.3	The Light-Matter Conundrum	74
3.4	Hydrogels	75
3.4.1	Preparation	76
3.5	Glues	77
3.6	Sample Holders	77
3.7	Clearing	79
3.8	Cleaning, Labelling, and Storing Samples	83
3.9	An Example: Time-lapse Live Imaging of Three-dimensional Cultures	84
3.9.1	Environmental Control: Temperature, pH, Oxygenation	84
3.9.2	Perfusion-based Environmental Control	88
3.9.3	Sample Holders for the Live Imaging of Three-dimensional Cell Cultures	91

3.9.3.1	Agarose Beakers	91
3.9.3.2	FEP-foil Sample Holders	91
3.9.4	References	93
3.10	A Bit of Literature	94
3.10.1	Reference Guides	95
3.10.2	Your Favorite Models	95
3.10.3	Others	96
3.10.4	Protocol Videos	97
	Bibliography	98
4	Detection in a Light Sheet Microscope	101
	<i>Jacob Licea-Rodriguez, Omar E. Olarte, Jordi Andilla, and Pablo Loza-Alvarez</i>	
4.1	Introduction	101
4.2	Image Formation in LSFM	102
4.2.1	WFM Scheme	102
4.2.2	LSFM Scheme	104
4.2.3	Practical Design Examples of an LSFM	106
4.3	Advanced Detection Schemes	108
4.3.1	Spectrally Resolved	108
4.3.2	Contrast Enhancement (Confocal Line)	113
4.3.3	Aberration Correction (Adaptive Optics)	115
4.3.4	Fast Volumetric Imaging	116
4.3.4.1	Inverted SPIM	117
4.3.4.2	Remote Focusing Using Tunable Lens	118
4.3.4.3	OPM-SCAPE	119
4.3.4.4	Wavefront Coding	120
4.4	Conclusions	120
	References	121
5	Light Sheet Microscope Configurations	125
	<i>Michael Weber and Emilio J. Gualda</i>	
5.1	LSFM Architectures	125
5.1.1	Multiple Objective Lens Configurations	125
5.1.2	Single Objective Lens Configurations	126
5.1.3	Opposing Objective Lens Configurations	128
5.2	Recording Three-Dimensional Image Data	128
5.2.1	Moving the Sample	128
5.2.2	Moving Detection and Illumination	130
5.3	Configurations that Expand on Specific Capabilities	131
5.3.1	First Light Sheet: Increasing Sample Viability	131
5.3.2	Imaging Easier: Increasing Flexibility	132
5.3.3	Imaging Deeper: Increasing Penetration Depth	132
5.3.4	Imaging Wider: Increasing the Effective Field of View	133
5.3.5	Imaging All Around: Increasing the Isotropy	134
5.3.6	Imaging Brighter: Increasing Contrast	135

5.3.7	Imaging Faster in 3D: Increasing Volumetric Temporal Resolution	136
5.3.8	Imaging Bigger: Increasing Sample Volume	137
5.3.9	Imaging Smaller: Increasing Spatial Resolution	138
5.3.10	Imaging More: Increasing Throughput	140
5.4	Summary	142
	References	142

6 Commercial and Open-Source Systems 149

Annette Bergter, Helmut Lippert, Gael Launay, Petra Haas, Isabelle Koester, Pierre P. Laissue, Tomas Parrado, Jeremy Graham, Jürgen Mayer, Girstmair Johannes, Pavel Tomančák, Wiebke Jahr, Benjamin Schmid, Jan Huiskens, and Emmanuel G. Reynaud

6.1	Introduction	149
6.2	Commercial Systems	151
6.2.1	Carl Zeiss Lightsheet Z.1: Market Introduction and Experiences	151
6.2.1.1	Introduction	151
6.2.2	ALPHA ³ : Light Sheet Fluorescence Microscope	154
6.2.2.1	Digital Light Sheet Generator	154
6.2.2.2	Modular and Flexible Light Sheet Setup	155
6.2.3	Illumination Unit(s)	156
6.2.3.1	Sample Chamber and Holders	156
6.2.3.2	Detection Unit	156
6.2.3.3	Software	157
6.2.3.4	High-Speed 3D Acquisition	157
6.2.3.5	Applications	158
6.2.3.6	Summary	158
6.2.4	Leica TCS SP8 DLS: Turning Light Sheet Microscopy Vertically	158
6.2.4.1	Light Path	159
6.2.4.2	Sample Preparation for the Leica TCS SP8 DLS	160
6.2.4.3	Convenient Software Tools to Manage Large Data Amounts	161
6.2.4.4	Technical Specifications	163
6.2.4.5	Applications	164
6.2.4.6	Imaging with Low Light Intensities	164
6.2.4.7	Imaging of Cleared Tissue	164
6.2.4.8	Imaging of Fast Dynamic Processes	164
6.2.4.9	High Throughput by Multiposition Experiments and Imaging of Larger Specimens	164
6.2.4.10	Advanced Applications by Combined Imaging Methods	165
6.2.4.11	Summary	165
6.2.5	The Large Selective Plane Illuminator (L-SPI): A Versatile Illumination Module for Large Photosensitive Samples	165
6.2.5.1	Introduction	165
6.2.5.2	Design	166
6.2.5.3	Light Sheet Properties and Resolution	169

6.2.5.4	Sample Preparation	169
6.2.5.5	Application 1: Fluorescence Imaging in Live Coral Samples	171
6.2.5.6	Application 2: Fluorescence Imaging in Other Live and Fixed Samples	173
6.2.5.7	Application 3: Reflectance Imaging	173
6.2.5.8	Software, Image Processing, and Data Management	174
6.2.5.9	Price Range	175
6.2.5.10	Acknowledgment	175
6.2.6	LUXENDO's Modular Light Sheet Solutions Adapt Specifically to a Broad Spectrum of Diverse Samples and Applications	175
6.2.6.1	Introduction	176
6.2.6.2	Multiple View Selective Plane Illumination Microscope (MuVi SPIM)	178
6.2.6.3	Clearing	179
6.2.6.4	Inverted View Selective Plane Illumination Microscope (InVi SPIM)	180
6.2.6.5	Quantitative View Selective Plane Illumination Microscope (QuVi SPIM)	182
6.2.6.6	Conclusion	183
6.2.6.7	Acknowledgments	183
6.3	Open-Source Systems	183
6.3.1	OpenSPIM: The Do It Yourself (DIY) Selective Plane Illumination Microscopy (SPIM) Approach	183
6.3.1.1	Introduction	183
6.3.1.2	The Principle of DIY SPIM	184
6.3.1.3	Of the Diversity of Biological Applications Using DIY SPIM Microscopy	187

7 Image Processing and Analysis of Light Sheet Microscopy Data 203

Akanksha Jain, Vladimir Ulman, Michal Krumnikl, Tobias Pietzsch, Stephan Preibisch, and Pavel Tomančák

7.1	Introduction	203
7.2	Multi-view SPIM Reconstruction	204

7.2.1	Multi-view Registration	206
7.2.2	Multi-view Fusion	208
7.3	Processing of Data from Other Light Sheet Microscopy Implementations	211
7.4	Big Image Data Management and Visualization	212
7.4.1	Hierarchical Data Format	212
7.4.2	Parallel Processing	214
7.4.3	Big Data Visualization	216
7.5	Analysis of Light Sheet Microscopy Datasets	218
7.5.1	Image Dimensionality Reduction for Better Analysis	219
7.5.2	Segmentation and Tracking in Light Sheet Data	219
7.5.3	Atlas Registration	222
7.6	Conclusion	223
	References	223

8 Imaging Molecular Dynamics Using a Light Sheet

Microscope 231

Jagadish Sankaran and Thorsten Wohland

8.1	Introduction	231
8.2	Fluorescence Techniques Using Light Sheet Illumination	232
8.2.1	Fluorescence Correlation Spectroscopy	232
8.2.2	Fluorescence Recovery After Photobleaching	235
8.2.3	Single-Particle Tracking	236
8.2.4	Förster Resonance Energy Transfer	238
8.2.5	Fluorescence Anisotropy Imaging	240
8.2.6	Fluorescence Lifetime Imaging Microscopy	241
8.3	Instrumentation	243
8.3.1	Light Sheet Microscope Configurations	243
8.3.2	Objectives and Cameras	247
8.4	Considerations for Acquisition Parameters	249
8.4.1	Light Sheet Thickness Versus Field of View	249
8.4.2	Field of View Versus Frame Rate	250
8.4.3	Pixel Size Versus Spatial Resolution	251
8.4.4	Pixel Size Versus Field of View and Frame Rate	251
8.4.5	Data Rate	251
8.4.6	Synchronous Versus Asynchronous Read-Out	251
8.4.7	Photobleaching and Phototoxicity	252
8.5	Applications of Fluorescence Techniques Performed Using Light Sheet Microscopes	254
8.5.1	Fluorescence Correlation Spectroscopy	254
8.5.2	Fluorescence Recovery After Photobleaching	255
8.5.3	Single-Particle Tracking	256
8.5.4	Förster Resonance Energy Transfer	257
8.5.5	Fluorescence Anisotropy Imaging	257

8.5.6	Fluorescence Lifetime Imaging Microscopy	258
8.6	Concluding Remarks	258
	References	260
9	Light-Sheet Applications: From Rare Cell Detection to Full Organ Analysis	269
