1. Superconducting Ternary Compounds: Prospects and Perspectives	
By Ø. Fischer and M.B. Maple (With 18 Figures)	1
1.1 Introduction	1
1.2 The Ternary Materials	2
1.2.1 The Ternary Molybdenum Chalcogenides (Chevrel Phases)	2
1.2.2 The Ternary Rhodium Borides	10
1.2.3 Other Ternary Compounds	17
1.3 Concluding Remarks	19
References	21
2. Chemistry and Structure of Ternary Molybdenum Chalcogenides	
By R. Chevrel and M. Sergent (With 37 Figures)	25
2.1 Overview	25
2.2 Preparation and Characterization	26
2.2.1 Preparation	26
2.2.2 Characterization: Chalcogenides $M_xMo_6X_8$	27
2.3 Crystal Structure	31
2.3.1 Structural Parameters of $M_xMo_6X_8$ Compounds	31
2.3.2 Crystal Structure	32
2.3.3 The Triclinic Phase	38
2.4 Relations Between Structure and Properties	39
2.4.1 Stabilization of Mo_6S_8	40
2.4.2 Mixed Anion: Substitution of Halogen for Chalcogen	41
2.4.3 Substitution on the Octahedral Cluster $(Mo, Me)_6$ (Me = Nb, Ta, Re, Ru, Rh)	43
2.4.4 Chalcogen-Chalcogen Substitution (S, Se, Te)	46
2.4.5 Substitution of Oxygen for Sulphur	46
2.4.6 Addition of MM'_x and Substitution of (M, M') on an Element in the Channels	47
2.5 New Ternary Compounds Resulting from Linear Condensation of the Octahedral Mo_6 Clusters	48
2.5.1 A New Cluster Mo_9 in a Mo_9X_{11} Unit (X = S, Se)	48

2.5.2	A New Cluster Mo_{12} in a $\text{Mo}_{12}\text{X}_{14}$ Unit ($\text{X} = \text{S}$)	54
2.5.3	New One-Dimensional Cluster $(\text{Mo}_{6/2})_{\infty}^1$ in the $(\text{Mo}_{6/2}\text{X}_{6/2})_{\infty}^1$ Unit ($\text{X} = \text{S}, \text{Se}, \text{Te}$)	57
2.6	Conclusion	60
	Appendix: Tables	61
	References	83
3.	Structure and Bonding of Ternary Superconductors	
	By K. Yvon (With 7 Figures)	87
3.1	Introductory Comments	87
3.2	Ternary Molybdenum Chalcogenides MMo_6X_8 (M: Metal, X: Chalcogen)	88
3.2.1	Structure	88
3.2.2	Occurrence	90
3.2.3	Bonding	91
3.3	Ternary Molybdenum Chalcogenides Built Up by Condensed $\text{Mo}_{3n}\text{X}_{3n+2}$ Units ($\text{X} = \text{S}, \text{Se}, \text{Te}$)	96
3.3.1	Structure	96
3.3.2	Occurrence	99
3.3.3	Bonding	99
3.4	Ternary Borides MT_4B_4 (M: Metal, T: Transition Element)	103
3.4.1	CeCo_4B_4 Type (tP18, $T_C^{\text{max}} = 12 \text{ K}$) ³	103
3.4.2	LuRu_4B_4 Type (tI72, $T_C^{\text{max}} = 11 \text{ K}$)	106
3.4.3	LuRh_4B_4 Type (oC108, $T_C^{\text{max}} = 6.3 \text{ K}$)	107
3.4.4	NdCo_4B_4 Type (tP18, $T_C < 4 \text{ K}$)	107
3.4.5	Bonding of the MT_4B_4 Borides	108
	References	110
4.	Metallurgy and Structural Transformations in Ternary Molybdenum Chalcogenides . By R. Flükiger and R. Baillif (With 23 Figures)	113
4.1	Preparation Methods and Stoichiometry	113
4.1.1	Sintering	114
4.1.2	RF Melting Under High-Pressure Argon	114
4.1.3	Stoichiometry	117
4.2	High-Temperature Phase Fields in Some Selected Systems	118
4.2.1	The Binary System Mo-S	118
4.2.2	The System $\text{Cu}_x\text{Mo}_6\text{S}_8$	119
4.2.3	The System $\text{Cu}_x\text{Mo}_6\text{Se}_8$	121
4.2.4	The System Pb-Mo-S: $\text{Pb}_x\text{Mo}_6\text{S}_{8-y}$ or $\text{Pb}_x\text{Mo}_6\text{S}_8$?	122
4.2.5	The Systems Ag-Mo-S, Ag-Mo-Se, Pb-Mo-Se, Sn-Mo-Se,	124
4.3	Low-Temperature Relationships in $\text{Cu}_x\text{Mo}_6\text{S}_8$ and $\text{Cu}_x\text{Mo}_6\text{Se}_8$	124
4.3.1	Experimental Methods	124
4.3.2	The System $\text{Cu}_x\text{Mo}_6\text{S}_8$	125
4.3.3	$\text{Cu}_x\text{Mo}_6\text{Se}_8$	127

4.4	The Type of Formation of the Triclinic Phase in Ternary Molybdenum Chalcogenides	130
4.4.1	Existence of a Miscibility Gap in the Rhombohedral Phase ..	130
4.4.2	"Small" M Atoms: M = Ni, Zn, Co, Cr, Mn, Ti, V, Fe	130
	a) The Systems $Ni_xMo_6Se_8$ and $Ni_xMo_6S_8$	131
	b) The Systems $Zn_xMo_6Se_8$ and $Zn_xMo_6S_8$	132
	c) Ternary Molybdenum Chalcogenides with M = Co, Cr, Mn, Ti, V and Fe	133
4.4.3	"Large" M Atoms	134
4.5	Mechanism of Structural Transformations in Ternary Molybdenum Chalcogenides	134
4.5.1	The Delocalization of the M Atom	134
4.5.2	The Mechanism of Structural Transformations in $M_xMo_6S_8$ Compounds (M = Cu, Fe, ...)	135
	a) Intrasite Mobility	135
	b) Metallurgical Arguments: Intersite Mobility	136
4.5.3	The Mechanism of Structural Transformations in Compounds with "Large" M Atoms	137
4.6	Superconductivity and Structural Transformations in Ternary Rhombohedral Compounds	138
	References	140
5.	Thin-Film Ternary Superconductors	
	By J.A. Woollam, S.A. Alterovitz, and H.-L. Luo (With 12 Figures)	143
5.1	Preliminary Comments	143
5.2	Preparation and Structure	144
5.3	Critical Fields	151
5.4	Critical Currents	153
5.5	Electronic Properties	159
5.6	Final Statements and Conclusions	162
	References	162
6.	Band Structures of $M_xMo_6X_8$ - and $M_2Mo_6X_6$-Cluster Compounds	
	By H. Nohl, W. Klose, and O.K. Andersen (With 23 Figures)	165
6.1	General Considerations	165
6.2	Input to the Band-Structure Calculations	168
	6.2.1 Crystal Structure	168
	6.2.2 Atomic-Sphere Potentials	174
