

# TABLE OF CONTENTS

## THE FOURTH DIMENSION IN GEODESY: OBSERVING THE DEFORMATION OF THE EARTH

by K. Lambeck	1
1. Introduction	2
2. Geodesy and the Plate Tectonics Hypothesis	4
3. Geodesy and the High Frequency Deformations of the Earth	8
4. Conclusion	12

## ABSOLUTE GRAVIMETRY AS AN OPERATIONAL TOOL FOR GEODYNAMICS RESEARCH

by W. Torge	15
1. Introduction	16
2. Development and Present State of Absolute Gravimetry	17
3. Experiences with the JILAG-3 Absolute Gravimeter	20
4. Conclusion	27

## SATELLITE GRAVITY GRADIOMETRY: A FUTURE TECHNIQUE FOR GLOBAL HIGH RESOLUTION GRAVITY FIELD RECOVERY

by K.H. Ilk	29
1. A Sketch of the Current State of the Art	30
2. The Structure of the Tidal Field and its Detection	33
3. The Signal to be Detected	36
4. Simulation Study	39
5. Discussion of the Results and Conclusions	41

## SEPARATION OF INERTIA AND GRAVITATION IN AIRBORNE GRAVIMETRY WITH GPS

by A. Kleusberg	47
1. Introduction	48
2. Airborne Gravimetry	48
2.1. Accelerations in a Moving Reference Frame	48
2.2. Approximations	50
2.3. Airborne Gravimeter Platform Measurements	51
2.4. Conventional Positioning and Data Reduction	53
3. The Role of GPS	53
3.1. GPS Observables	54
3.2. GPS Relative Positioning Accuracy	54
4. Platform Accelerations from GPS	55
4.1. Obtaining Platform Accelerations from Carrier Phases	55
4.2. Error Propagation in Numerical Differentiation	57
4.3. Carrier Phase and Frequency Rate Accuracy	59
5. Conclusions	61

## **PRECISE GRAVIMETRIC GEOID COMPUTATIONS OVER LARGE REGIONS**

by **R. Forsberg and A.H.W. Kearsley**

	65
1. Introduction	66
2. Methods for Gravimetric Geoid Computations	67
2.1. Stokes' Integration	67
2.2. Least-Squares Collocation	68
2.3. FFT Methods	69
3. Use of Auxiliary Digital Terrain Models	70
4. Comparison of Gravimetric Geoid Predictions	71
4.1. Scandinavian Geoid Predictions	71
4.2. Geoid Prediction in South-Eastern Australia	74
4.3. Comparison of South-East Australian FFT Geoid to GEOSAT Data	76
5. Tayloring of Spherical Harmonic Reference Models	77
5.1. Geopotential Model Tayloring in Scandinavia	78
5.2. A Taylored Gravity Field Model for Australia	79
6. Conclusions	82

## **A REVISION OF R.S. MATHER'S WORK ON THE DETERMINATION OF STATIONARY SEA SURFACE TOPOGRAPHY AND GLOBAL VERTICAL DATUM DEFINITION**

by **B. Heck**

	85
1. Introduction	86
2. Determination of Quasi-Stationary Sea Surface Topography from Geodetic Data	87
2.1. Modelling Aspects and Data Requirements for the Solution of the Geodetic Boundary Value Problem	88
2.2. Determination of Quasi-Stationary Sea Surface Elevations from Satellite Altimetry	90
2.3. Evaluation of the Quasi-Stationary Sea Surface Topography	91
3. Global Vertical Datum Definition and Unification of Geodetic Levelling Datums	92
4. Conclusions	95

## **THE EFFECTS OF A POSSIBLE CHANGE IN CLIMATE ON THE EARTH'S FIGURE**

by **K. Bretterbauer**

	99
1. Introduction	100
2. The Geodetic Problem	101
3. The Solution of the Problem	101
3.1. Deformation of the Potential Surface	102
3.2. Shift of Geocenter	104
3.3. Equality of Water Volume	105
4. The Result	106
5. Conclusions	108

# GLACIAL REBOUND AND SEA-LEVEL CHANGE: AN EXAMPLE OF DEFORMATION OF THE EARTH BY SURFACE LOADING

by <b>K. Lambeck</b>	111
1. Introduction	112
2. The Glacial Rebound Problem	112
3. The Sea Level Equation	115
4. Convergence Requirements	120
5. Characteristics of the Theoretical Sea-Level Curve	122
6. Principal Conclusions and Unresolved Questions	133

# GEODETIC ANALYSIS OF MOTION AT A CONVERGENT PLATE BOUNDARY

by <b>W.I. Reilly</b>	139
1. Introduction	140
2. Position and Gravity on a Deforming Earth	140
2.1. Rates of Change	140
2.2. Deformation Tensor and the Gravity-change Vector	141
2.3. Continuum Models for $\hat{u}_s^r$ and $\hat{w}_r$	142
2.4. Examples of Time-variable Terms for Geodetic Observations	142
2.5. Adjustment of Coordinate Parameters at the Reference Epoch	144
3. The Horizontal Strain Field	146
3.1. Dilatation and Shear	146
3.2. Bending	148
4. The Convergent Plate Margin	149
4.1. The Plate Boundary in New Zealand	149
4.2. Strain at an Obliquely Convergent Margin	152
5. Geodetic Surveys in New Zealand	153
6. Deformation Along the Hikurangi Margin	154
6.1. Results of the Analysis	154
6.2. Discussion	156
7. Conclusions	158

# FOUR DIMENSIONAL ADJUSTMENT OF THE FINNISH FIRST-ORDER TRIANGULATION: RESULTS OF A TEST COMPUTATION

by <b>J. Kakkuri and R. Chen</b>	161
1. Introduction	162
2. Observational Adjustment	163
2.1. Available Observations in the Area of Study	163
2.2. Adjustment	163
3. Deformation Analysis	163
3.1. Aspects of Crustal Deformation	163
3.2. Strain Patterns	165
3.3. Deformation Model	167
4. Coordinate Adjustment	169
5. Conclusion	171

## **PRECISE GEODYNAMIC MEASUREMENTS IN SOUTH AMERICA**

by **E. Groten**

- |    |   |     |
|----|---|-----|
| 1. | Introduction and Description of the Problem | 173 |
| 2. | Non-Newtonian Aspects                       | 174 |
| 3. | Numerical Results                           | 176 |
| 4. | Conclusions                                 | 178 |

## **ACCURACY OF GPS IN CRUSTAL DEFORMATION STUDIES:**

### **OBSERVATION AND ADJUSTMENT DESIGN**

by **D.B. Grant**

- |      |  |     |
|------|--|-----|
| 1.   | Introduction                             | 185 |
| 2.   | Deformation                              | 186 |
| 3.   | Covariance Analysis                      | 188 |
| 4.   | Network Observation and Adjustment       | 189 |
| 5.   | Discussion of Results                    | 191 |
| 5.1. | Terrestrial / GPS Deformation Adjustment | 191 |
| 5.2. | GPS / GPS Deformation Adjustment         | 193 |
| 6.   | Conclusions                              | 197 |

## **MONITORING CRUSTAL MOTION IN PAPUA NEW GUINEA USING THE GLOBAL POSITIONING SYSTEM**

by **A. Stolz**

- |    |   |     |
|----|---|-----|
| 1. | Introduction  | 199 |
| 2. | General Tectonics of the Papua New Guinea Region    | 200 |
| 3. | Solomon Sea / South Bismarck Plate Boundary         | 201 |
| 4. | Solomon Sea / Indo-Australian Plate Boundary        | 204 |
| 5. | Monitoring Crustal Plate Motion in Papua New Guinea | 205 |
| 6. | Anticipated GPS Performance                         | 212 |
| 7. | Concluding Remarks                                  | 215 |

## **THE DETERMINATION OF PRESENT-DAY TECTONIC MOTIONS FROM LASER RANGING TO LAGEOS**

by **D.E. Smith et al**

- |    |                     |     |
|----|---------------------|-----|
| 1. | Introduction        | 221 |
| 2. | Methodology         | 222 |
| 3. | Geophysical Results | 223 |
| 4. | Summary             | 232 |
|    |                     | 238 |

## **NONLINEAR INVERSION OF GEODETIC AND GEOPHYSICAL DATA: DIAGNOSING NONLINEARITY**

by **P.J.G. Teunissen**

- |    |   |     |
|----|---|-----|
| 1. | Introduction                                  | 241 |
| 2. | Three Simple Measures of Nonlinearity         | 242 |
| 3. | Two Types of Nonlinearity                     | 245 |
| 4. | Geometry of Nonlinear Least-Squares Inversion | 249 |
| 5. | Diagnosing Nonlinearity                       | 254 |
| 6. | Acknowledgement                               | 257 |
|    |   | 259 |
