

Contents

1. Introduction	
By <i>E. Marsch and R. Schwenn</i> (With 2 Figures)	1
1.1 Why the "Inner Heliosphere"?	1
1.2 Scientific Objectives and General Aspects of the Helios Mission	4
1.3 Scientific Highlights and Summary	7
1.4 Heliospheric Physics and Some Astrophysical Connections ..	10
References	12
2. Remote Sensing Observations of the Solar Corona	
By <i>M.K. Bird and P. Edenhofer</i> (With 23 Figures)	13
2.1 Introduction	13
2.2 Morphology of the Outer Corona: A Brief Survey	14
2.2.1 The White-Light Corona	16
2.2.2 Sources and Properties of Coronal Emission	19
2.2.3 Coronal Rotation	25
2.3 Coronal Plasma Density	27
2.3.1 Spatial Distribution of Coronal Plasma Density	28
2.3.2 Temporal Variations	35
2.4 Coronal Magnetic Structure	39
2.4.1 Coronal Magnetic Field Models	41
2.4.2 Coronal Magnetic Field Observations	46
2.5 Coronal Velocities and Turbulence	52
2.5.1 EUV Observations	54
2.5.2 Radio-Sounding Observations	59
2.6 Coronal Mass Ejections	70
2.6.1 CME Morphology, Phenomenology and Statistics ..	71
2.6.2 Radio-Sounding Investigations of Coronal and Interplanetary Transients	79
2.7 Appendix: Radio-Sounding Measurement Techniques	84
References	87
3. Large-Scale Structure of the Interplanetary Medium	
By <i>R. Schwenn</i> (With 28 Figures)	99
3.1 Introduction	99
3.1.1 The Solar Wind at 1 AU, Status 1974	99

3.1.2	The Plasma Experiment on the Helios Probes	100
3.1.3	The Basic Stream Structure	101
3.2	Longitudinal Stream Boundaries	104
3.2.1	Radial Evolution of High-Speed Stream Fronts	107
3.2.2	Stream Interfaces	110
3.2.3	Fine Structure of High-Speed Stream Fronts	113
3.2.4	Problems of Mapping Solar Wind Structures Back to the Sun	114
3.2.5	Mapping and Predictions	117
3.2.6	A Scenario of Longitudinal Stream Structure	118
3.3	Latitudinal Stream Boundaries	120
3.3.1	Local Latitudinal Speed Gradients	121
3.3.2	Evidence for Meridional "Squeezing" of Interaction Regions	123
3.3.3	Problems of Associating Stream Profiles from Different Latitudes	124
3.3.4	A Scenario of Latitudinal Stream Structure	126
3.4	Stream Structures with Respect to the Heliomagnetic Equator	126
3.4.1	Stream Structure with Respect to Heliomagnetic Latitude	127
3.4.2	Stream Structure with Respect to Heliomagnetic Longitude	129
3.4.3	Solar Wind and Coronal Streamers	130
3.4.4	Interplanetary Consequences	132
3.5	Corotating Shock Waves	135
3.6	Scenario in Terms of the "Ballerina Model"	140
3.7	The Solar Wind as a Two-State Phenomenon	142
3.7.1	Slow and Fast Solar Wind: Characteristic Differences	146
3.7.2	Slow and Fast Solar Wind: Similarities	152
3.7.3	Radial Gradients	155
3.8	Variations During the Solar Activity Cycle	158
3.8.1	Variations of the "Average" Solar Wind in the Ecliptic Plane	159
3.8.2	Structural Changes During the Solar Cycle	163
3.9	Conclusions and Outlook	167
3.9.1	Solar Wind Origin	167
3.9.2	Other Open Questions on Large-Scale Phenomena	169
3.9.3	Outlook	171
	References	171
4.	The Interplanetary Magnetic Field	
	By <i>F. Mariani and F.M. Neubauer</i> (With 9 Figures)	183
4.1	Introduction	183

4.1.1	The Magnetic Field at 1 AU, Status 1974	183
4.1.2	A Short Description of the <i>Helios</i> Magnetic Experiments	184
4.2	Radial Variations	184
4.2.1	Background	184
4.2.2	The Radial Component B_r	185
4.2.3	The Azimuthal Component B_ϕ	188
4.2.4	The Normal Component B_θ	190
4.2.5	The Field Magnitude B	190
4.2.6	The Field Orientation	191
4.2.7	The Field Variability at Low Frequencies	192
4.3	The Solar Magnetic Field and the Interplanetary Magnetic Field	194
4.3.1	Background Observations	194
4.3.2	The Heliospheric Current Sheet	195
4.3.3	The Source Region of the Heliospheric Current Sheet	197
4.3.4	The Fine Structure of the Sector Boundary	201
4.4	Summary and Outlook	203
	References	204

5. Interplanetary Dust

	By <i>C. Leinert and E. Grün</i> (With 41 Figures)	207
5.1	Introduction	207
5.2	Methods of Observation	210
5.2.1	Collection of Individual Particles	210
5.2.2	Impact Ionization Detectors	211
5.2.3	Penetration Detectors	211
5.2.4	Lunar Microcraters	213
5.2.5	Meteors	213
5.2.6	Zodiacal Light Observations	215
5.2.7	Comparison	219
5.3	Particle Properties	219
5.3.1	Elemental Composition	220
5.3.2	Shape	222
5.3.3	Optical Properties	222
5.3.4	Density	223
5.4	Physical Processes	224
5.4.1	Gravity	224
5.4.2	Radiation Pressure	224
5.4.3	The Poynting–Robertson Effect	226
5.4.4	The Lorentz Force	227
5.4.5	Evaporation	229
5.4.6	Sputtering	231
5.4.7	Collisions	231

5.5	Mass and Size Distribution	233
5.5.1	Particle Populations	234
5.5.2	Spatial Density	236
5.5.3	β Meteoroids and the Discussion About Small Particles in Interplanetary Space	236
5.5.4	Mass Influx	237
5.6	Spatial Distribution	239
5.6.1	Symmetries	239
5.6.2	Out-of-ecliptic Distribution	241
5.6.3	Radial Dependence	242
5.7	Orbit Distribution	246
5.7.1	Meteor Orbits	246
5.7.2	Orbits Determined from Zodiacal Light Observations	248
5.7.3	Orbits of Small Meteoroids	250
5.8	Compatibility of Dust Experiments with Zodiacal Light Observations	251
5.9	Sources and Sinks	254
5.9.1	Asteroids as Sources of Dust	254
5.9.2	Dust Production by Comets	255
5.9.3	Cometary Dust	256
5.9.4	Input and Spatial Distribution – the Formal Relation	260
5.9.5	Input and Spatial Distribution – Consequences	262
5.9.6	Mass Balance on a Large Scale	264
5.9.7	Local Mass Balance	264
5.10	Attempt at a Judgement	268
	References	269
