|----------------------------------------------------------------------|----|
| <b>1 An Overview of Pulse Deposition</b>                             | 19 |
| 1.1 Introduction                                                     | 19 |
| 1.2 Basic Definitions                                                | 20 |
| 1.3 Practical Electrodeposition Systems                              | 21 |
| 1.3.1 Measurement and Control of Potential and Current               | 21 |
| 1.3.2 Electrolyte Composition                                        | 24 |
| 1.3.3 Electrode Reactions                                            | 25 |
| 1.4 Dynamic Phenomena during Pulsed Deposition or Dissolution        | 27 |
| 1.4.1 Double Layer Charging                                          | 28 |
| 1.4.2 Reaction Dynamics                                              | 28 |
| 1.4.3 Electrocrystallisation                                         | 29 |
| 1.4.4 Mass Transfer Effects                                          | 31 |
| <b>2 Thermodynamics</b>                                              | 33 |
| 2.1 Introduction                                                     | 33 |
| 2.2 Electrochemical Equilibrium at Interfaces                        | 33 |
| 2.3 The Origin of Electrochemical Potentials and the Nernst Equation | 35 |
| 2.4 Standard Electrode Potentials                                    | 37 |
| 2.5 Standard Electrode Potentials and Speciation of Metal Complexes  | 38 |
| 2.6 The Electrical Double Layer                                      | 41 |
| 2.7 Departure from Equilibrium                                       | 42 |
| 2.8 Capacitive Effects in Pulse Plating                              | 43 |
| 2.8.1 Calculation of Double Layer Charging and Discharging Times     | 43 |
| 2.8.2 Capacitive Damping of Faradaic Current                         | 47 |
| 2.8.3 Effect of Pseudocapacitance                                    | 48 |
| <b>3 Reaction Kinetics</b>                                           | 51 |
| 3.1 Introduction                                                     | 51 |
| 3.2 Simple Charge Transfer Kinetics                                  | 51 |
| 3.3 Charge Transfer Kinetics of Multistep Processes                  | 57 |

|          |                                                                         |            |
|----------|-------------------------------------------------------------------------|------------|
| 3.4      | Reaction Mechanism .....                                                | 59         |
| 3.4.1    | Copper Deposition and Dissolution .....                                 | 59         |
| 3.4.2    | Cadmium Deposition and Dissolution .....                                | 61         |
| 3.4.3    | Silver Deposition and Dissolution .....                                 | 62         |
| 3.5      | Charge Transfer Kinetics of Alloy Plating .....                         | 64         |
| 3.6      | Effect of Additives on Charge Transfer Kinetics .....                   | 66         |
| 3.7      | Overall Importance of Kinetics in Pulse Plating .....                   | 68         |
| <b>4</b> | <b>Nucleation and Morphology .....</b>                                  | <b>72</b>  |
| 4.1      | Introduction .....                                                      | 72         |
| 4.2      | Mechanism of the Electrochemical Metal Deposition .....                 | 72         |
| 4.3      | Pulse Plating and Deposit Morphology .....                              | 76         |
| 4.4      | Additive Effects .....                                                  | 81         |
| <b>5</b> | <b>Current Distribution .....</b>                                       | <b>83</b>  |
| 5.1      | Introduction .....                                                      | 83         |
| 5.2      | Current Distribution .....                                              | 84         |
| 5.3      | Qualification of Current Distribution .....                             | 88         |
| 5.4      | Quantification of Current Distribution .....                            | 92         |
| 5.5      | Current Distribution and Pulse Plating .....                            | 95         |
| <b>6</b> | <b>Mass Transfer during Pulse Deposition .....</b>                      | <b>100</b> |
| 6.1      | Introduction .....                                                      | 100        |
| 6.2      | Ionic Transport and the Concentration Depletion Layer .....             | 101        |
| 6.2.1    | Diffusional Transport .....                                             | 102        |
| 6.2.2    | Convective-Diffusional Transport .....                                  | 103        |
| 6.3      | Concentration Depletion during Pulse Current Deposition .....           | 105        |
| 6.4      | Maximum Plating Rate during Pulse Deposition .....                      | 107        |
| 6.5      | Pulse Limiting Current using the Dual Diffusion Layer Concept .....     | 111        |
| 6.6      | Experimental Verification of the Pulse Limiting Current .....           | 112        |
| 6.7      | Effect of Mass Transport on Microstructure and Current Efficiency ..... | 114        |
| 6.8      | Effect of Mass Transport on Alloy Composition .....                     | 117        |
| 6.9      | Effect of Mass Transport on Additives .....                             | 118        |
| 6.10     | Mass Transport on the Microscale .....                                  | 120        |
| <b>7</b> | <b>Modelling of Pulse Plating .....</b>                                 | <b>123</b> |
| 7.1      | Introduction .....                                                      | 123        |
| 7.2      | Model Equations .....                                                   | 124        |

---

|          |                                                                               |            |
|----------|-------------------------------------------------------------------------------|------------|
| 7.2.1    | Single Metal Deposition . . . . .                                             | 124        |
| 7.2.2    | Metal Deposition with Co-evolution of Hydrogen. . . . .                       | 127        |
| 7.2.3    | Alloy Deposition . . . . .                                                    | 129        |
| 7.2.3.1  | Effect of Pulse Parameters . . . . .                                          | 130        |
| 7.2.3.2  | Effect of Galvanic Corrosion . . . . .                                        | 131        |
