1. Nonlinear Photonics: Prospects and Problems	
By <i>H.M. Gibbs</i> and <i>G. Khitrova</i>	1
1.1 Nonlinear Materials	1
1.2 Nonlinear Devices	2
1.3 Applications of Nonlinear Photonics	4
1.4 Conclusion	5
References	5
2. Semiconductor Nonlinear Materials	
By <i>N. Peyghambarian</i> and <i>S.W. Koch</i> (With 33 Figures)	7
2.1 Optical Nonlinearities in Bulk Semiconductors	9
2.1.1 GaAs	14
2.1.2 ZnSe	18
2.1.3 CdS	21
2.1.4 CuCl	21
2.1.5 InSb, InAs, and CdHgTe	22
2.1.6 Thermal Nonlinearities in GaAs, CdS, ZnSe, and ZnS	23
2.2. Optical Nonlinearities in Low-Dimensional Semiconductors .	23
2.2.1 Quantum Wells	23
2.2.2 Quantum Wires, Quantum Dots, and Semiconductor	
Doped Glasses	31
2.3 Optical Bistability and Nonlinear Optical Semiconductor	
Devices	44
2.3.1 Optical Bistability in Etalon Devices	44
2.3.2 Optical Bistability in Semiconductor Waveguide	
Devices	46
2.3.3 Optical Bistability in SEEDs	47
2.3.4 Thermal Etalon Devices	48
2.3.5 Optical Logic Gates	48
2.3.6 Use of the Optical Stark Effect in Logic Gates	48
2.3.7 Gain and Cascading Issues in Nonlinear Etalons	49
2.4 Conclusion	53
References	55

3. Optical Interconnects

	By <i>R. K. Kostuk, J. W. Goodman, and L. Hesselink</i>	
	(With 14 Figures)	61
3.1	Potential Advantages of Optical Interconnects	62
3.2	Comparison of Electrical and Optical Interconnections	63
3.2.1	Electrical Interconnect Power Requirements	63
3.2.2	Optical Interconnects	67
3.2.3	Fan-Out	69
3.2.4	Ideal Optical Sources	70
3.2.5	Real Optical Sources	71
3.2.6	LED Emission Characteristics	72
3.2.7	Laser Diode Characteristics	74
3.3	Optical Distribution Techniques	77
3.3.1	Guided Optical Distribution Techniques	77
3.3.2	Free Space Distribution Methods	78
3.4	First-Order Analysis of Holographic Interconnects	79
3.4.1	Interconnect Parameters	79
3.4.2	Interconnect Designs	83
3.4.3	Comparison of Designs	84
3.4.4	Higher-Order Design Considerations	86
3.5	Summary and Future Directions	86
	References	88

4. First Implementations of Optical Digital Computing Circuits Using Nonlinear Devices

	By <i>A. C. Walker, B. S. Wherrett, and S. D. Smith</i>	
	(With 43 Figures)	91
4.1	Introduction	91
4.1.1	Optical Computing Architecture Considerations	91
4.1.2	Optical Logic Devices	94
4.2	Optical Bistability and Optical Logic	96
4.2.1	Refractive Optical Bistability	96
4.2.2	Early Demonstrations of Refractive Bistability	98
4.2.3	Optical Bistable Etalons as Logic and Memory Elements	99
4.2.4	Practical Aspects of Devices for Experimental Optical Digital Processors	106
4.3	Nonlinear Interference Filters as Optical Logic Elements	106
4.3.1	Bistability in Interference Filters	106
4.3.2	Linear Interference Filters	108
4.3.3	Nonlinear Interference Filters – Early Experiments ..	110
4.3.4	Theory and Optimization of NLIFs	111
4.3.5	Performance Limits of NLIFs	115
4.3.6	Bistable Etalons with Absorbed Transmission	116

4.4	All-Optical Digital Computing Circuits	118
4.4.1	Background	118
4.4.2	Coupled-Switch Circuits	118
4.4.3	Lock-and-Clock Loop Processors	124
4.4.4	Image Processing	130
4.4.5	Numerical Processing	137
4.4.6	Communication Applications	142
4.5	Conclusions	146
	References	147
5.	Optical Processing with Nonlinear Photorefractive Crystals	
	By <i>H. Rajbenbach, J.-P. Huignard, and P. Günter</i>	
	(With 29 Figures)	151
5.1	Characteristic Parameters of Photorefractive Crystals	151
5.1.1	Crystal Sensitivity	153
5.1.2	Steady-State Diffraction Efficiency	154
5.1.3	Response Time of the Photorefractive Effect	154
5.2	Beam Coupling in Photorefractive Crystals	156
5.2.1	Influence of the Recording Parameters (Spatial Frequency, Fringe Velocity, Beam Ratio) ...	159
5.2.2	Summary of Crystal Performance	161
5.3	Application of Beam Coupling to Optical Computing Operations	161
5.3.1	Image Amplification	161
5.3.2	Phase Conjugation in Photorefractive Crystals	162
5.3.3	Self-Pumped Phase Conjugation	164
5.3.4	Laser Beam Steering/Optical Interconnections	166
5.3.5	Self-Induced Optical Cavities	168
5.3.6	Optical Logic Gates and Parallel Algorithmic State Machines	170
5.3.7	Image Subtraction Using a Self-Pumped Phase Conjugate Mirror Interferometer	172
5.3.8	Novelty Filters	173
5.3.9	Image Convolution and Correlation	174
5.3.10	Coherent Homodyne Detection	177
5.4	Optical Memories with Photorefractive Crystals	177
5.4.1	Multiple Image Storage	178
5.4.2	Associative Memories	179
5.5	Concluding Remarks	181
	References	181
6.	All-Optical Guided-Wave Devices for Switching and Routing	
	By <i>Y. Silberberg and P.W. Smith</i> (With 14 Figures)	185
6.1	Introduction	186
6.1.1	Speed or Parallelism?	186

6.1.2	Material Requirements	187
6.1.3	Fiber and Planar Waveguide Devices	188
6.2	Interferometric Devices	189
6.2.1	Mach-Zehnder Interferometers	189
6.2.2	Kerr Shutters	190
6.2.3	Dual-Mode Interferometers	190
6.3	Dual-Mode Switches	191
6.3.1	Nonlinear Directional Couplers	191
6.3.2	Experimental Nonlinear Directional Coupler Studies ..	193
6.3.3	Polarization Switching and Other Analogs	194
6.3.4	Nonlinear Waveguide Junctions	195
6.3.5	The Pulse Breakup Problem	197
6.4	Other Nonlinear Switching Phenomena	198
6.4.1	Nonlinear Parametric Processes and All-Optical Switching	198
6.4.2	Self-Trapping Devices	200
6.5	Conclusion	201
	References	201
