Introduction	1
1. Angular Momentum in Quantum Mechanics	4
1.1 Central Force Problem and Orbital Angular Momentum	4
1.2 General Definitions of Angular Momentum	12
1.2.1 Matrix Representations	13
1.2.2 Example for Spin $\frac{1}{2}$ Particles	13
1.3 Total Angular Momentum for a Spin $\frac{1}{2}$ Particle	14
1.4 Coupling of Two Angular Momenta:	
Clebsch-Gordan Coefficients	17
1.5 Properties of Clebsch-Gordan Coefficients	20
1.6 Racah Recoupling Coefficients:	
Coupling of Three Angular Momenta	22
1.7 Symmetry Properties of $6j$ -Symbols	23
1.8 Wigner $9j$ -Symbols: Coupling and Recoupling	
of Four Angular Momenta	25
1.9 Classical Limit of Wigner $3j$ -Symbols	27
Short Overview of Angular Momentum Coupling Formulas	28
2. Rotations in Quantum Mechanics	31
2.1 Rotation of a Scalar Field-Rotation Group $O(3)$	31
2.2 General Groups of Transformations	35
2.3 Representations of the Rotation Operator	37
2.3.1 The Wigner D -Matrices	37
2.3.2 The Group $SU(2)$ -Relation with $SO(3)$	38
2.3.3 Application: Geometric Interpretation	
of Intrinsic Spin $\frac{1}{2}$	40
2.4 Product Representations and Irreducibility	43
2.5 Cartesian Tensors, Spherical Tensors, Irreducible Tensors	45
2.6 Tensor Product	47
2.7 Spherical Tensor Operators: The Wigner-Eckart Theorem	48
2.8 Calculation of Matrix Elements	49
2.8.1 Reduction Rule I	50
2.8.2 Reduction Rule II	51
Short Overview of Rotation Properties, Tensor Operators,	
Matrix Elements	52
	IX

3. The Nuclear Shell Model	54
3.1 One-particle Excitations	54
3.1.1 Introduction	54
3.1.2 The Radial Equation and the Single-particle Spectrum: the Harmonic Oscillator in the Shell Model	61
3.1.3 Illustrative Examples of Energy Spectra	67
3.1.4 Hartree-Fock Methods: A Simple Approach	70
3.2 Two-particle Systems: Identical Nucleons	74
3.2.1 Two-particle Wavefunctions	74
3.2.2 Two-particle Residual Interaction	77
3.2.3 Calculation of Two-Body Matrix Elements	87
3.2.4 Configuration Mixing: Model Space and Model Interaction	101
3.3 Three-particle Systems and Beyond	108
3.3.1 Three-particle Wave Functions	108
3.3.2 Extension to n -particle Wave Functions	112
3.3.3 Some Applications: Three-particle Systems	115
3.4 Non-identical Particle Systems: Isospin	119
3.4.1 Isospin: Introduction and Concepts	119
3.4.2 Isospin Formalism	121
3.4.3 Two-Body Matrix Elements with Isospin	130
4. Electromagnetic Properties in the Shell Model	136
4.1 General	136
4.2 Electric and Magnetic Multipole Operators	137
4.3 Single-particle Estimates and Examples	139
4.4 Electromagnetic Transitions in Two-particle Systems	145
4.5 Quadrupole Moments	149
4.5.1 Single-particle Quadrupole Moment	149
4.5.2 Two-particle Quadrupole Moment	152
4.6 Magnetic Dipole Moment	153
4.6.1 Single-particle Moment: Schmidt Values	153
4.6.2 Two-particle Dipole Moment	156
4.7 Additivity Rules for Static Moments	157
5. Second Quantization	161
5.1 Creation and Annihilation Operators	161
5.2 Operators in Second Quantization	165
5.3 Angular Momentum Coupling in Second Quantization	169
5.4 Hole Operators in Second Quantization	171
5.5 Normal Ordering, Contraction, Wick's Theorem	174
5.6 Application to the Hartree-Fock Formalism	177

6. Elementary Modes of Excitation:	
Particle-Hole Excitations at Closed Shells	179
6.1 General	179
6.2 The TDA Approximation	181
6.3 The RPA Approximation	186
6.4 Application of the Study of $1p - 1h$ Excitations: ^{16}O	192
7. Pairing Correlations: Particle-Particle Excitations in Open-Shell Nuclei	197
7.1 Introduction	197
7.2 Pairing in a Degenerate Single j -Shell	200
7.3 Pairing in Non-Degenerate Levels: Two-Particle Systems	204
7.4 n Particles in Non-Degenerate Shells: BCS-Theory	206
7.5 Applications of BCS	217
7.5.1 Odd-Even Mass Differences, E_{1qp}	217
7.5.2 Energy Spectra	219
7.5.3 Electromagnetic Transitions	221
7.5.4 Spectroscopic Factors	226
7.6 Broken-Pair Model	229
7.6.1 Low-Seniority Approximation to the Shell Model	229
7.6.2 Broken-Pair or Generalized-Seniority Scheme for Semi-Magic Nuclei	232
7.6.3 Generalization to Both Valence Protons and Neutrons	237
7.7 Interacting Boson-Model Approximation to the Nuclear Shell Model	239
8. Self-Consistent Shell-Model Calculations	254
8.1 Introduction	254
8.2 Construction of a Nucleon-Nucleon Force: Skyrme Forces	256
8.2.1 Hartree-Fock Bogoliubov (HFB) Formalism for Nucleon-Nucleon Interactions Including Three-Body Forces	256
8.2.2 Application of HFB to Spherical Nuclei	259
8.2.3 The Extended Skyrme Force	260
8.2.4 Parameterization of Extended Skyrme Forces: Nuclear Ground-State Properties	265
8.3 Excited-State Properties of SkE Forces	271
8.3.1 Particle-Particle Excitations: Determination of x_3	272
8.3.2 The Skyrme Interaction as a Particle-Hole Interaction	279
8.3.3 Rearrangement Effects for Density-Dependent Interactions and Applications for SkE Forces	291

9. Some Computer Programs	298
9.1 Clebsch-Gordan Coefficients	298
9.2 Wigner $6j$ -Symbol	300
9.3 Wigner $9j$ -Symbol	303
9.4 Calculation of Table of Slater Integrals	304
9.5 Calculation of δ -Matrix Element	309
9.6 Matrix Diagonalization	316
9.7 Radial Integrals Using Harmonic Oscillator Wave Functions	320
9.8 BCS Equations with Constant Pairing Strength	323
Appendix	327
A. The Angular Momentum Operator in Spherical Coordinates	327
B. Explicit Calculation of the Transformation Coefficients for Three-Angular Momentum Systems	328
C. Tensor Reduction Formulae for Tensor Products	329
D. The Surface-Delta Interaction (SDI)	331
E. Multipole Expansion of $\delta(\mathbf{r}_1 - \mathbf{r}_2)$ Interaction	335
F. Calculation of Reduced Matrix Element $\langle (1/2)j Y_k (1/2)j' \rangle$ and Some Important Angular Momentum Relations	338
G. The Magnetic Multipole Operator	342
H. A Two-Group (Degenerate) RPA Model	343
I. The Condon-Shortley and Biedenharn-Rose Phase Conventions: Application to Electromagnetic Operators and BCS Theory	347
I.1 Electromagnetic Operators: Long-Wavelength Form and Matrix Elements	347
I.2 Properties of the Electromagnetic Multipole Operators Under Parity Operation, Time Reflection and Hermitian Conjugation	348
I.3 Phase Conventions in the BCS Formalism	353
Problems	357
