

Table of Contents

General Basis

1 Preconditions for Long-Term Implantological Success	2
A. Schroeder	
Introduction	2
The Materials Problem	3
Mechanical Properties	3
Biocompatibility	5
 2 Anatomical Basis of Implantology	 11
E. van der Zypen	
Bone Structure of the Maxilla and Age-Related Changes	11
Configuration of the Maxillary Alveolar Process	11
Tooth Axes	12
Structure of the Alveolar Wall	12
Relationship of the Maxillary Teeth to the Maxillary Sinus and Nasal Cavity	15
Bone Structure of the Mandible and Age-Related Changes	16
Configuration of the Mandible	16
Tooth Axes	17
Structure of the Alveolar Wall	18
Course of the Mandibular Canal	18
Changes in Mandibular Form during Life	19
Remarks Concerning the Periodontal Ligament	21
Innervation of Teeth and Gingiva	24
Innervation of Maxillary Teeth	24
Innervation of Mandibular Teeth	26
Innervation of the Maxillary and Mandibular Gingiva	29
Arterial Blood Supply to the Maxillary and Mandibular Teeth	30
Arteries of the Maxillary Teeth	30
Arteries of the Mandibular Teeth	32
Venous Drainage from Maxillary and Mandibular Teeth	32
Lymphatic Drainage from Maxillary and Mandibular Teeth and Gingiva	34
Lymphatic Drainage from the Teeth	34
Lymphatic Drainage from the Gingiva	35
Comments	35

3 The Properties of Titanium	37
S. Steinemann	
Introduction	37
Material Properties	38
Corrosion – Chemical Compatibility	39
Behavior of Titanium in an Electrolyte	43
Biologic Compatibility	45
Titanium as an Implant Material	47
Plasma Coating	48
Osteointegration	51
Effectiveness	51
A Model of the Bond	55
 The ITI System	
4 A Brief History of Implantology	60
A. Schroeder	
Introduction	60
Transfixation	60
Submucosal Implants	60
Subperiosteal Implants	60
Endosteal Implants	62
The Development of the ITI-System	63
 5 Principles of the Hollow Cylinder Design	66
F. Sutter	
Introduction	66
Implant Shape and Design	66
Primary Stability	68
Implant Bed Preparation	68
Designers' View of the Implant Material	72
Surface Morphology of the Anchorage Element	72
Coating-Process Technology	72
Mechanical Properties of the Plasma-Sprayed Coating	74
Characteristics and Advantages of the Perforated Hollow Body	
Implant Design	74
Biomechanics of the Implant-Bone Structural Unit	80
Standard Accessories	85
Implant Manufacturing Procedures	88

6 Tissue Reactions	91
A. Schroeder	
with a contribution by H. Stich	
Introduction	91
Reaction of Bone	91
Soft Tissue ("Gingiva" Collar)	101
Discussion of Histologic Findings and Conclusions	107
Preparation of Histologic Specimens	109
H. Stich	
Light Microscopy	109
Specimen Preparation for Scanning Electron Microscopy	113
Chemicals, Supplies and Apparatus	114

Hollow Cylinder Types – Procedures

7 Single Cylinder	118
F. Sutter and A. Schroeder	
Introduction	118
Type C	118
Sinusoidal Longitudinal Grooves	118
Ring-Shaped Marginal Bulge	119
One- and Two-Part Systems: Rationale	119
Design Options for a Two-Part System	121
Implantation Technique	123
Final Comments	132
Type HC	132
Introduction	132
Type HC, One-Part Implant	134
Type HC, Two-Part Implant	136
Instrumentarium	139
Implantation Technique	144
Concluding Remarks	175
8 Multiple Cylinder	178
F. Sutter and A. Schroeder	
with a contribution by G. Krekeler	
Type K	178
Implantation Technique	180
Concluding Remarks	201

Type H	203
F. Sutter and G. Krekeler	
Implantation Technique	206
Example Cases	222
Concluding Remarks	227

9 New Developments: Bonefit Concept	228
F. Sutter, D. Buser and A. Schroeder	

Hollow Screw (HS) Implants	228
Instruments and Implantation Procedure	230
The Screw Implants (Type S)	230
Instruments and Implantation Procedure	239
Thread Profile	239
Packaging and Presentation of ITI Implants	244
The New ITI-Bonefit Concept as an Integrated System	244
Indications, Clinical Procedures and Results	249
Results of the New Two-Part HC and HS Implants	255

Clinical Treatment

10 Indications and Contraindications	260
A. Schroeder	

Contraindications	260
Age Limit	261
Indications	261

11 General Surgical Principles	266
B. Maeglin	

Preparations for Surgery	266
Surgical Operation	268
Postoperative Care	274

12 X-Ray	276
G. Krekeler	

General Observations	276
Postoperative X-Rays	277

13 Peri-Implant Problems	281
G. Krekeler	
Introduction	281
Anchoring of the Implant Base	281
Gingivoinplant Marginal Closure	284
Microbial Plaque	288
Width of the Attached or Keratinized Gingiva	293
14 Mucogingival Surgery	295
D. Buser	
Introduction	295
Different Surgical Methods	295
Edentulous Mandible	296
Free-End Saddle Situation in the Mandible	304
15 Principles of the Superstructure	308
A. Schroeder	
Promoting Optimal Oral Hygiene	308
Implants as Retention Elements for Complete Protheses	308
Free-End Situations in the Mandible	309
Single-Tooth Implants	310
Occlusal Factors and the Technical Construction	311
Complete Prosthetics	311
Crown-Bridge Prosthetics	320
16 Difficulties and Complications	331
B. Maeglin	
Intraoperative Complications	331
Hemorrhage	331
Nerve Injuries	331
Opening of the Maxillary Sinus or Nasal Cavity	332
Injury to Adjacent Teeth	332
Loss of Edges of the Alveolar Cortical Bone	332
Lack of Primary Stability	332
Implant and Instrument Fractures	333
Foreign Bodies	333
Emphysema in the Region of the Face and Neck	333
Postoperative Complications	334
Early Complications	335

Early Infection	336
Nerve Damage	337
Late Complications	337
Implant Loosening	337
Late Infection	338
Bone Degradation	340
Gingival Recession	341
Secondary Nerve Damage	342
Implant Fractures	342

17 Follow-Up and Recall	344
G. Krekeler	

Topics of General Interest

18 Legal Considerations	348
A. Schroeder	

Postgraduate Training	348
Undertaking of the Treatment	349
Establishing of the Indication	349
Performance of the Therapy	350
Postoperative Follow-Up	350

19 Documentation and Statistics	352
A. Schroeder and G. Krekeler	

Parameters of Documentation	352
Implementation of Data Registration	353
Statistics	354
Type E	357
Type F [HC]	357
Type K	358
Type H	358
Final Comments	359

20 Final Remarks	360
A. Schroeder	

Index	362
