Part 1	Statement of the Problem	1
1	Historical Introduction	3
1.1	Contexts	3
1.2	“Context” as a Philosophical Concept in Analysis of Logical Relations	3
1.2.1	The Cartesian View of Logic	3
1.2.2	Kant’s <i>Critique of Pure Reason</i>	4
1.3	Developments of Kant’s Ideas up to 1950	6
1.4	“Context” as a Psychological Concept in the Analysis of Learning Processes	6
1.5	The Hippocampus and Contextual Representation	8
2	Designs for a Prototype Cerebral Cortex	11
2.1	Introduction	11
2.2	Rule-Dependent Synaptic Change	11
2.3	A Cortex to Suit Stimulus-Response Learning Theorists	13
2.3.1	Sensory and Motor Cortices Alone	13
2.3.2	Sensory Cortex, Motor Cortex and Striatum	13
2.3.3	Objections to the First Prototype Cortex	15
2.3.4	A Tripartite Cortex	15
2.4	Distributed Memory	17
2.4.1	The “Combinatorial Matrix”	17
2.4.2	The Cell Assembly	20
2.4.3	An Advantage of the Combinatorial Matrix: Economy of Storage of Information	21
2.5	A Cortex for Gestalt Psychologists	22
2.5.1	Ambiguity in the Environment	23
2.6	Towards a Cortex for the Cognitive Psychologist	27
2.6.1	Resolution of Ambiguity by the Environment as a Whole	27
2.6.2	The Effect of the Size of the Cortex	27
2.7	Discussion	31
2.8	Hints that the Hippocampus Might be Involved in Forming Global Cell Assemblies	31

Part 2	Reviews Of The Experimental Evidence Relevant To The Formulation Of The Theory Of Cortico-Hippocampal Interaction	33
3	Anatomy of the Hippocampal Complex and Related Regions	35
3.1	Introduction	35
3.2	Topographical Anatomy of the Hippocampal Formation	35
3.3	Connections of the Hippocampal Complex	39
3.3.1	The Dentate Gyrus	39
3.3.1.1	Extrinsic Afferents	39
3.3.1.2	Intrinsic Connections	44
3.3.2	The CA Fields	46
3.3.2.1	Extrinsic Afferents of Field CA3	46
3.3.2.2	Intrinsic Efferents of CA3	46
3.3.2.3	Extrinsic Afferents of Field CA1	47
3.3.2.4	Extrinsic Efferents of CA3 and CA1	49
3.4	The Subiculum, Pre- and Para-subiculum	50
3.4.1	Extrinsic Afferents	50
3.4.2	Extrinsic Efferents	50
3.4.3	Intrinsic Connections	51
3.5	Septal Afferents to the Entorhinal Cortex	51
3.6	Connections Between the Isocortex and Hippocampal Formation	51
3.6.1	Afferents to the Hippocampal Formation	52
3.6.2	Efferents from the Hippocampal Formation	52
3.7	Connections Between the Isocortical Areas Directly Linked with the Hippocampal Formation, and Other Isocortical Areas	52
3.8	Summary of Connections, and Comment	56
4	Discovery and General Behavioural Correlates of the Hippocampal Theta Rhythm	60
4.1	Introduction	60
4.2	Discovery and early studies	60
4.3	General Behavioural Correlates of Hippocampal Theta Activity in Several Species	61
4.3.1	Rat	62
4.3.1.1	Behavioural Correlations of Vanderwolf and Co-Workers	62
4.3.1.2	Corroboration and Extension of Vanderwolf's Correlations	64
4.3.1.3	Apparent Exceptions to Vanderwolf's Correlations	67
4.3.1.4	Theta Activity in Rat—Summary	70
4.3.2	Guinea Pig	70
4.3.3	Rabbit	71
4.3.4	Cat	72
4.3.4.1	Similarities to Dominant Correlations in Rats	72
4.3.4.2	Discrepant Evidence	75
4.3.4.3	RSA Correlating with Orienting	75

4.3.4.4	Summary	77
4.3.5	Dogs	77
4.3.6	Monkey	77
4.3.7	Man	80
4.3.8	Summary	80
4.3.9	Discussion	81
4.3.9.1	Technical matters	82
4.3.9.2	Ecological Matters	83
4.3.9.3	Correlations Between Hippocampal RSA and Overt Behaviour: Concluding Remarks	85
5	The Septum as a Pacemaker for the Hippocampal Theta Rhythm	87
5.1	Introduction	87
5.2	The Effect of Septal Lesions	87
5.3	Rhythmic Electrical Activity in the Septum, and Behavioural Correlates of this Rhythm	88
5.4	Rhythmic Activity in the Hippocampus not Dependent on a Rhythmic Input from the Septal Region	90
5.5	Brainstem, Diencephalic or Septal Stimulation and Rhythmic Activity in the Septum and Hippocampus	92
5.5.1	Septal Stimulation	92
5.5.2	Brainstem and Diencephalic Stimulation	93
5.6	Conclusion and Discussion	97
5.6.1	The Septum as the Pacemaker for the Theta Rhythm	97
5.6.2	The Nature of the Control from the Brainstem	97
6	Subdivision of Theta Types According to Sources of Extra-Hippocampal Control	99
6.1	Introduction	99
6.2	Control from the Brainstem	99
6.2.1	Evidence for Dual Control of the Theta Rhythm from the Brainstem	99
6.2.2	Evidence for Single Source of Control of Theta Activity	101
6.2.3	Dual or Single Pacemaker? Discussion	103
6.3	Control from Within the Hemisphere	105
6.3.1	The Effect of Extra-Hippocampal Lesions Within the Forebrain (see Table 9)	105
6.3.2	Discussion of Section 6.3.1	106
6.3.2.1	Single or Dual Control from Brainstem/Septal Region and the Cortical Lesion Data	106
6.3.2.2	The Nature of the Influence from the Neocortex	107
6.4	Conclusions	109
7	Evidence for Multiple Sources of Theta Generation in the Hippocampus and Related Structures	110
7.1	Introduction	110

7.2	The Discovery of Two Theta Generators in the Hippocampus	110
7.3	Laminar Profiles of Theta Activity in the Hippocampus	110
7.3.1	Phenomenology of Laminar Profiles	110
7.3.1.1	Introduction	110
7.3.1.2	Curarized and Urethanized Preparations	111
7.3.1.3	In Vitro Preparations	116
7.3.1.4	Free Moving Rats and REM Sleep	116
7.3.1.5	Laminar Profiles in Other States	119
7.3.1.6	Conclusions	120
7.3.2	Intrahippocampal Lesions	121
7.4	Theta Potentials Outside the Hippocampal Complex	121
7.4.1	Theta Activity in the Entorhinal Cortex	121
7.4.2	Retrosplenial Cortex	124
7.4.3	Theta Activity in the Cingulate Cortex	124
7.4.4	Theta Activity in the Prefrontal Cortex	125
7.4.5	Theta Activity in the Neocortex Generally	126
8	Towards a Neuronal Model to Account for the Laminar Waveforms of Theta Activity	128
8.1	Introduction	128
8.2	Technical Matters	129
8.2.1	Theoretical Analyses of Laminar Phase Profiles	129
8.2.2	Identification of Interneurons and Projection Neurons	130
8.3	Towards a Neuronal Model for Each Preparation	131
8.3.1	Urethane Anaesthetized Rat	131
8.3.1.1	A Theoretical Analysis of Laminar Phase Profiles in Urethanized Rat	131
8.3.1.2	Evidence Concerning Phase Relations Between Unit Firing and Local Theta Activity	133
8.3.1.3	Relation of Intracellular Potentials to Theta EEG Activity	135
8.3.1.4	Biophysical Effects of Transmitters Which Might Mediate the Theta Rhythm in the Hippocampus	137
8.3.1.5	Urethanized Rat: Conclusions and Discussion of the Phase Reversal Between the Two Generators	138
8.3.2	Free Moving Rat	143
8.3.2.1	Neuronal Models of Theta Activity in the Free Moving Rat	143
8.3.2.2	Evidence Concerning Phase Relations Between Unit Firing and Local Theta Activity	148
8.3.2.3	Free Moving Rat: Discussion and Conclusions	148
8.3.3	Unanaesthetized Rabbits	151
8.4	General Conclusions on Hippocampal Sources Generating Theta Rhythms	153
8.4.1	Conclusions Concerning the Hippocampal Complex	153
8.4.2	Discussion of Hippocampo-Cortical Interaction	155

Part 3 The Theory of Resonant, Self-Organizing Phase-Locked Loops 157

9	Cortico-Hippocampal Interaction: Theory, Implications and Predictions	159
9.1	Introduction	159
9.2	Self-Organization of Resonant Phase-Locked Loops Between Hippocampus and Cortex	160
9.2.1	Connectional Basis of Phase-Locked Loops	160
9.2.2	Loop Selection by the Hebbian Mechanism	162
9.2.3	Further Implications of Self-Organizing Phase-Locked Loops	166
9.2.4	A Prediction: Phase-locking of Cortical Theta Rhythms to Hippocampal Theta Rhythms	167
9.2.4.1	Phase Relation Between Theta Potentials in Entorhinal Cortex and the Hippocampus	168
9.2.4.2	Phase Relation Between Theta Potentials in the Hippocampus and the Isocortex Generally	170
9.2.4.3	Summary of Evidence, and Discussion	171
9.3	Role of Resonant Phase-Locked Loops in Information Processing	171
9.3.1	Recapitulation	171
9.3.2	Phase-Locked Loops and the Resolution of Ambiguity	172
9.3.2.1	An Implication: Units in the Hippocampus Representing Environments	173
9.3.2.2	Evidence for Acquisition of Context Representations	177
9.3.2.3	Prediction: Memory Retrieval and Performance Dependent on Theta Frequency	178
9.3.3	Categorical Recognition of an Environment	179
9.3.4	Selective Attention	180
9.3.4.1	State-Dependence of Information Retrieval	181
9.3.4.2	Electrophysiological Correlates of Selective Attention	181
9.3.5	Improved Economy of Information Storage Resulting from Cortico-Hippocampal Interplay	182
9.3.6	Cortico-Hippocampal Interplay in Relation to the Striatum	183
9.3.6.1	Response Selectivity in Hippocampal Projections Cells	184
9.3.6.2	Habits Versus Memories	186
9.4	Summary	186
10	Theta Activity and Learning	189
10.1	Introduction	189
10.2	Theta Activity in Response to Novelty	190
10.3	Theta Activity During Learning	191
10.3.1	Theta Activity During Classical Conditioning	191
10.3.2	Theta Activity During Appetitive Learning	192
10.3.3	Theta Activity During Active Avoidance Conditioning	193
10.3.4	Theta Activity During Discrimination Learning	193
10.3.5	Theta During GO-NO GO Discrimination	195

10.3.6	Acquired Theta Activity which Correlates with Response Components	195
10.3.7	Reward and Theta	196
10.3.8	Summary and Discussion So Far	196
10.4	Decline or Persistence of Acquired Theta Activity as the Response Becomes Automatic	197
10.4.1	Examples of Decline of Theta Activity as the Behavioural Response Becomes Automatic	197
10.4.2	Examples of Persistence of Theta Activity in Well-Trained Tasks	197
10.4.3	Discussion	199
10.5	The Hippocampal EEG During Extinction, or Other Examples of Response Omission	200
10.5.1	The Evidence	200
10.5.2	Summary and Discussion of the Evidence	202
10.6	Theta Activity in Records Made Outside the Task Performance Epochs in Relation to Rate of Subsequent Learning	203
10.7	Electrically Driven Theta and Learning	203
10.7.1	Introduction	203
10.7.2	Theta Driving and Improvement of Acquisition/Retention	204
10.7.3	Theta Driving and the Effects of Reward Omission	205
10.7.4	Discussion of the Above Evidence	208
10.8	Changes in Regional Occurrence, or Phase of Theta in Different Generators During Learning, or Between Correct and Incorrect Trials	210
10.9	Summary and Discussion in the Light of Earlier Theoretical Notions	213
11	Synopsis and Epilogue	216
11.1	Synopsis	216
11.2	Epilogue	222
