

Contents

1 Introduction	1
2 Materials and Methods	3
2.1 Optics	4
2.2 Axonal Degeneration	4
3 Observations	5
3.1 The Neuronal Architecture	5
3.2 Topographical Relationships of the Main Subdivisions	5
3.3 Ventral Division	7
3.4 Dorsal Division	16
3.5 Medial Division	26
3.6 Golgi Type II Neurons	26
3.7 The Axonal Architecture	27
3.8 Ascending Connections	51
3.8.1 Ascending Connections in the Opossum	51
3.8.2 Ascending Connections in the Cat	68
4 Discussion	69
4.1 Comparative Anatomy	69
4.2 Classification of Neurons and Axons	70
4.3 Homologous Nuclei and Nuclear Groups	71
4.4 Comparison of the Opossum and the Cat	72
4.5 Functional Organization and Physiological Implications	73
4.6 Ascending Afferent Connections of the Medial Geniculate Body	75
4.6.1 Ventral Division	75
4.6.2 Medial Division	75
4.6.3 Dorsal Division	76
4.7 Other Studies of the Medial Geniculate Body	79
4.8 Intralaminar Nuclei	80
4.9 The Problem of Homology	80
4.9.1 Topological Considerations	81
4.9.2 Developmental Considerations	81
4.9.3 Connectional Considerations	83
4.9.4 Functional Considerations	84
4.9.5 Comparative Neurology and Homology	84

5 Summary	86
6 Acknowledgments	87
7 References	88
Subject Index	95
