|                                                                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Lazy Meta-Learning: Creating Customized Model Ensembles<br>on Demand .....                                                                                      | 1   |
| <i>Piero P. Bonissone</i>                                                                                                                                       |     |
| Multiagent Learning through Neuroevolution .....                                                                                                                | 24  |
| <i>Risto Miikkulainen, Eliana Feasley, Leif Johnson, Igor Karpov,<br/>Padmini Rajagopalan, Aditya Rawal, and Wesley Tansey</i>                                  |     |
| Reverse-Engineering the Human Auditory Pathway .....                                                                                                            | 47  |
| <i>Lloyd Watts</i>                                                                                                                                              |     |
| Unpacking and Understanding Evolutionary Algorithms .....                                                                                                       | 60  |
| <i>Xin Yao</i>                                                                                                                                                  |     |
| Representation in Evolutionary Computation .....                                                                                                                | 77  |
| <i>Daniel Ashlock, Cameron McGuinness, and Wendy Ashlock</i>                                                                                                    |     |
| Quo Vadis, Evolutionary Computation? On a Growing Gap between<br>Theory and Practice.....                                                                       | 98  |
| <i>Zbigniew Michalewicz</i>                                                                                                                                     |     |
| Probabilistic Graphical Approaches for Learning, Modeling, and<br>Sampling in Evolutionary Multi-objective Optimization .....                                   | 122 |
| <i>Vui Ann Shim and Kay Chen Tan</i>                                                                                                                            |     |
| The Quest for Transitivity, a Showcase of Fuzzy Relational Calculus ....                                                                                        | 145 |
| <i>Bernard De Baets</i>                                                                                                                                         |     |
| Cognition-Inspired Fuzzy Modelling .....                                                                                                                        | 166 |
| <i>Maria Rifqi</i>                                                                                                                                              |     |
| A Unified Fuzzy Model-Based Framework for Modeling and Control<br>of Complex Systems: From Flying Vehicle Control to Brain-Machine<br>Cooperative Control ..... | 185 |
| <i>Kazuo Tanaka</i>                                                                                                                                             |     |
| Predictive Learning, Knowledge Discovery and Philosophy of Science ...                                                                                          | 209 |
| <i>Vladimir Cherkassky</i>                                                                                                                                      |     |

Evolving Spiking Neural Networks and Neurogenetic Systems  
for Spatio- and Spectro-Temporal Data Modelling and Pattern  
Recognition ..... 234  
    *Nikola Kasabov*

Uncovering the Neural Code Using a Rat Model during a Learning  
Control Task ..... 261  
    *Chenhui Yang, Hongwei Mao, Yuan Yuan, Bing Cheng, and  
    Jennie Si*
