

# Contents

<b>1</b>	<b>Balloon Experiment Technique</b>	<b>1</b>
1.1	Launching Facilities	1
1.2	The Balloon in Space Research	7
1.3	Auroral X-Ray Scintillator Spectrometer	11
1.4	Payload Equipment	15
1.5	Ground-Based Support of Balloon Experiments	20
<b>2</b>	<b>Auroral X-Rays: Generation and Transfer into the Atmosphere</b>	<b>23</b>
2.1	Introduction	23
2.2	Photon Generation at the Atmospheric Boundary	25
2.2.1	Initial Conditions and Basic Equations	25
2.2.2	Results of Calculation	27
2.3	Calculation of X-Ray Propagation in the Atmosphere	30
2.3.1	Method of Calculation (Monte Carlo) for Homogeneous Precipitation	30
2.3.2	Calculation of Localized Precipitations	32
2.4	Transformation of X-Ray Flux and Energy Spectrum in the Atmosphere for Extended Regions of Precipitation	34
2.5	Results of Calculation of Photon Transport from Local Sources	38
2.6	X-Ray Angular Distribution	41
2.7	Calculation of Scintillator Spectrometer Efficiency	43
2.8	Practical Example of Electron Spectra Reconstruction	46
2.9	Conclusions and Recommendations	47
<b>3</b>	<b>The Structure of Auroral X-Ray Events and Electron Fluxes in the Magnetosphere</b>	<b>50</b>
3.1	General Features of X-Ray Events	50
3.1.1	Spatial and Temporal Characteristics	50
3.1.2	Energy Spectrum and the Relationship with Magnetospheric Activity	54
3.2	Classification of Auroral X-Ray Forms	56
3.3	Charged Particles in the Magnetosphere	65
3.3.1	The Magnetosphere Configuration	65
3.3.2	The Plasma Sheet	66
3.3.3	Trapped Radiation	71
3.4	Auroral Radiation	80

<b>4</b>	<b>Auroral Electrons in the Midnight Sector and Magnetospheric Disturbances</b>	<b>93</b>
4.1	Dynamic and Energetic Structure of the Magnetospheric Substorm	93
4.1.1	Substorm Phases	94
4.1.2	Energy Scheme of a Substorm. Case Study N1	96
4.2	Growth Phase	100
4.2.1	Auroral X-Ray Growth Phase Events	100
4.2.2	Growth Phase. Case Studies N1, N2, N3	101
4.2.3	The Problem of the Source	108
4.3	Breakup – An Explosive Onset in the Active Phase of a Substorm	110
4.3.1	X-Ray Breakup Events	110
4.3.2	Satellite Observations. Case Study N2	116
4.3.3	Tail Reconnection Models of Breakup	120
4.3.4	Alternative Models	125
4.4	Active Phase. Convection	127
4.4.1	Large-Scale Phenomena	127
4.4.2	Hard-Spectrum X-Ray Events	130
4.4.3	Case Study N1	132
4.5	Active Phase. Expansion	134
4.5.1	Discrete Aurora and Associated Phenomena	134
4.5.2	Long-Duration Precipitation Events. Case Study N2	138
4.5.3	Magnetospheric Tail During Substorm	140
4.5.4	The Boundary Between the Trapping and Tail Regions. Case Study N3	146
4.6	Auroral Region Model of Electron Acceleration and Precipitation During Substorms	148
<b>5</b>	<b>Pulsations and Microbursts of Drifting Auroral Electron Precipitation</b>	<b>155</b>
5.1	Morning Bay-Like Precipitations	156
5.2	Long-Period X-Ray Pulsations (1 – 20 min)	160
5.2.1	The Morphology of Slow Pulsations	160
5.2.2	Ps6 Pulsations: Case Study N3	166
5.2.3	A Diffusion Model of Slow Variation of Particle Precipitation	170
5.3	Fast Pulsations and Impulses (3 – 60 s)	175
5.4	Auroral X-Ray Microbursts	180
5.5	Precipitations During SC and SI	189
5.6	Interrelation of Pulsating Structures of Precipitating Auroral Electrons	192
5.7	Classification of the Microstructure of Electron Precipitation	197
	<b>Conclusion</b>	<b>200</b>
