Contents

Preface — V

1 Introduction — 1

2 Load disturbance rejection problem — 6
2.1 Control structure and assumptions — **6**
2.2 Feedback control analysis — **8**
2.3 Conclusions — **13**

3 Feedforward control — 14
3.1 Basis of feedforward control — **14**
3.2 Inversion problems — **17**
3.3 Classical solutions to inversion problems — **20**
3.4 New solutions to the inversion problems — **23**

4 Tuning rules for delay inversion problems — 25
4.1 Preliminaries — **25**
4.2 Tuning rules for classical control scheme — **28**
4.3 Tuning rules for non-interacting control scheme — **52**
4.4 Tuning rules – Summary and comparison — **58**

5 Tuning rules for RHP zeros and integrators — 73
5.1 Tuning rules for processes with right-half plane zeros — **73**
5.2 Tuning rules for integrating processes — **77**

6 Performance indices for feedforward control — 83
6.1 Performance index — **83**
6.2 Examples and analysis — **87**

7 Feedforward implementation — 96
7.1 Basic implementation of feedforward control — **97**
7.2 Control signal saturation — **100**
7.3 Improved feedforward saturation handling — **107**
7.4 Mode switching and bumpless transfer — **109**
7.5 Noise filtering — **116**
7.6 Feedforward combined with cascade control — **118**
7.7 Smith Predictor — **127**
7.8 Robustness — **129**

Bibliografische Informationen
https://d-nb.info/1328109968

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

8 Case studies — 131
8.1 Two-tank level system — **131**
8.2 Solar collector field — **132**
8.3 Room temperature — **134**
8.4 Jacket reactor temperature — **135**
8.5 DC motor position — **138**

9 Experimental evaluation — 140
9.1 Greenhouse temperature control problem — **140**
9.2 Greenhouse description — **141**
9.3 Low-order models for control purposes — **142**
9.4 Calculation of the feedback controller and the feedforward compensators — **144**
9.5 Experimental control tests at the greenhouse — **147**
9.6 Discussion — **155**

Tuning rules summary — 157

Bibliography — 160

Index — 163
