

Contents

1. Introduction. By J.M. Bowman	1
References	5
2. Inelastic Vibrational and Rotational Quantum Collisions. By D. Secrest ...	7
2.1 General Computational Techniques	8
2.1.1 The Scattering Equations	9
2.1.2 Boundary Conditions	12
2.1.3 Asymptotic Approximations	14
2.2 A Higher-Order Coupled States Approximation	17
2.2.1 The Phase in the Body Fixed Coordinate System	18
2.2.2 Correcting the Coupled States Approximation	20
References	23
3. Quasiclassical Trajectory Studies of State to State Collisional Energy Transfer in Polyatomic Molecules. By G.C. Schatz (With 2 Figures)	25
3.1 Background	26
3.2 Semiclassical Vibration-Rotation Motions of Polyatomic Molecules ...	32
3.2.1 Classical Molecular Hamiltonian	32
3.2.2 Rotational-Vibrational Partitioning	35
3.2.3 Vibrational Semiclassical Eigenstates: Classical Perturbation Theory	37
3.2.4 Rotational Motions and Eigenstates	44
3.3 Trajectory Studies of Polyatomic Molecule Collisions	47
3.3.1 Trajectory Initial Conditions	47
3.3.2 Trajectory Final Conditions	49
3.3.3 Assignment of Final Quantum States	49
3.4 Collisional Excitation in He + SO ₂	53
3.4.1 Details of Trajectory Calculations	53
3.4.2 Trajectory Results	54
3.5 Conclusion	58
References	59

4. Rotational Rainbows in Atom-Diatom Scattering	
By R. Schinke and J.M. Bowman (With 20 Figures)	61
4.1 Background	61
4.1.1 Experiment	61
4.1.2 Theory	63
4.1.3 Outline	65
4.2 Review of Rainbows in Isotropic Potential Scattering	65
4.3 Classical Limit of the IOS Approximation	70
4.3.1 Basic IOS Formulas	70
4.3.2 Classical Limit of (4.14) for $j = 0$	71
4.3.3 Uniform Approximation	74
4.3.4 Qualitative Behavior of Cross Sections	77
4.3.5 Relationship to Other Work	81
4.4 Numerical Examples	83
4.4.1 Homonuclear Case	83
4.4.2 Heteronuclear Case	91
4.5 Recent Experiments and Comparison with Theory	94
4.5.1 State-Unresolved Experiments	95
4.5.2 State-Resolved Experiments	97
4.6 Approximate Analytical Expressions for $\chi(\ell, \gamma)$, $J(\ell, \gamma)$ and the Rainbow Curve $j_R(\theta)$	102
4.6.1 Hard Shell Scattering	102
4.6.2 High Energy Approximation	106
4.7 Conclusion and Prognosis	111
References	113
 5. Quantum Mechanical Treatment of Electronic Transitions in Atom-Molecule Collisions.	
By M. Baer (With 16 Figures)	117
5.1 The General Approach	118
5.1.1 The Diabatic Representation	119
5.1.2 The Adiabatic Representation	120
5.1.3 The Adiabatic-Diabatic Transformation	122
5.1.4 The Adiabatic-Diabatic Transformation in Three Dimensions	126
5.2 Numerical Examples	130
5.2.1 Reactive Systems	130
(a) The $(\text{H}_2 + \text{H})^+$ System	131
(b) The $(\text{Ar} + \text{H}_2)^+$ System	134
(c) The $\text{Ba} + \text{N}_2\text{O}$ System	136
(d) The $\text{F} + \text{H}_2$ System	136
5.2.2 Nonreactive Systems	138
5.3 Electronic Nonadiabatic Processes Among Potential Curves	140

5.3.1 Reducing the Surface Crossing Problem to a Curve	
Crossing Problem	141
5.3.2 The Two-Curve Model	144
5.3.3 A Multi-Curve Crossing Model for Reactions	147
(a) The Model	147
(b) The Simplified Models	148
5.4 Electronic Nonadiabatic Processes in Strong Laser Fields	149
5.5 Summary and Conclusions	152
References	153
Subject Index	157
