Acknowledgments	v
Abstract	vii
Abbreviations and symbols	xi
1 Introduction	1
1.1 Physiological control	4
1.2 Aims of the thesis	6
1.3 Structure of the thesis	7
2 Background	9
2.1 Cardiological background	9
2.1.1 Cardiovascular system	9
2.1.2 Healthy heart	11
2.1.3 Circulatory regulation	15
2.1.4 Heart failure and cardiogenic shock	17
2.1.5 Left ventricular assist device therapy	19
2.2 Robust control background	23
2.2.1 System representations	23
2.2.2 Closed-loop transfer functions	26
2.2.3 Signal and system norms	26
2.2.4 Representation of uncertainty	29
2.2.5 Robustness	30
2.2.6 $\mathcal{H}_\infty$ optimal control	34
3 Modeling	39
3.1 The cardiovascular system	39
3.1.1 Nominal model	40
3.1.2 Uncertainty model	48
3.2 The left ventricular assist device	51
3.2.1 Nominal model	52
3.2.2 Uncertainty model	55
3.3 Model order reduction	57
3.4 Cardiac output estimation	60
3.5 Summary	64

4	Control design	65
4.1	Objectives and requirements	65
4.2	Concept of assistance control	67
4.3	Related work	70
4.4	Assistance estimation	73
4.4.1	Uncertainty model	75
4.5	Robust assistance controller	76
4.5.1	Weighting functions	78
4.5.2	Controller synthesis	79
4.5.3	Analysis of robustness	81
4.5.4	Implementation aspects	84
4.6	Overall control system	87
4.7	Summary	88
5	Results and discussion	89
5.1	Integrated cardiac support system	89
5.2	Hybrid mock circulatory loop study	91
5.2.1	Experimental setup	93
5.2.2	Cardiac output estimation	95
5.3	Animal study AHrecovery	97
5.3.1	Experimental setup and procedure	98
5.3.2	Cardiac output estimation	99
5.3.3	Assistance control	102
5.4	Animal study inHeart	105
5.4.1	Experimental setup and procedure	106
5.4.2	Cardiac output estimation	108
5.4.3	Robust assistance control	111
5.5	Discussion	115
5.5.1	Cardiac output estimation	115
5.5.2	Control strategies	118
5.6	Summary	120
6	Conclusion	121
A	Appendix	125
B	Publications	135
	Bibliography	141
