1	Introduction	1
1.1	Overview and motivation	1
1.1.1	Definition of the field	2
1.1.2	Clinical relevance	4
1.1.3	Scope of this thesis	5
1.2	Open research questions and aims	7
1.2.1	Biomechanical gait phase analysis	7
1.2.2	Biomechanical intervention analysis	8
1.2.3	Gait analysis system accuracy evaluation	9
1.2.4	Clinical application of instrumented gait analysis	10
1.3	Scientific contributions	11
1.4	Thesis outline	13
2	Fundamentals	15
2.1	Systems for measuring human motion	15
2.1.1	Marker-based motion capture	16
2.1.2	Ground reaction forces	20
2.1.3	Inverse kinematics and kinetics	23
2.1.4	Anatomical directions	27
2.1.5	Markerless silhouette-based motion capture	27
2.1.6	Inertial sensor systems	29
2.2	Gait fundamentals	32
2.2.1	The gait cycle	32
2.2.2	Spatio-temporal gait parameters	35
2.3	Statistical hypothesis testing in biomechanics	37
2.4	System agreement measures	41
2.4.1	Concurrent validity	41
2.4.2	Test-retest reliability	43
2.5	Machine learning fundamentals	45
2.5.1	Bayes' theorem	45

2.5.2	Machine learning algorithms	47
2.5.3	Feature selection	54
2.5.4	Model assessment	54
3	Literature overview	59
3.1	Instrumented gait phase evaluation	59
3.1.1	Gait sub phases and speed dependency	59
3.1.2	Gait event detection	61
3.2	System accuracy of sensor-based systems	64
3.2.1	Concurrent validity	64
3.2.2	Test-retest reliability	65
3.3	Instrumented gait analysis in osteoarthritis (OA)	66
3.3.1	Knee osteoarthritis	66
3.3.2	Biomechanics of laterally wedged insoles	68
3.3.3	Biomechanics of total knee arthroplasty (TKA)	70
3.3.4	Sensor systems for OA and TKA assessment	72
3.3.5	OA gait classification and treatment recovery detection	74
4	Motion capture methods	79
4.1	Laboratory setup	79
4.2	Marker setup	80
4.3	Biomechanical pipeline	82
5	Gait sub phase evaluation using motion capture	89
5.1	Introduction	89
5.2	Methods	90
5.2.1	Study population	91
5.2.2	Instrumentation	91
5.2.3	Study protocol	92
5.2.4	Data analysis	93
5.3	Results	94
5.4	Discussion	97
6	Evaluation of non-invasive interventions using motion capture	103
6.1	Introduction	103
6.2	Methods	105
6.2.1	Study population	105
6.2.2	Study protocol	105
6.2.3	Data analysis	106

6.3	Results	108
6.3.1	Speed dependent biomechanical effects	108
6.3.2	One-dimensional temporal analysis	110
6.3.3	Effect of knee alignment	111
6.4	Discussion	113
7	System accuracy evaluation of a sensor-based gait analysis system	119
7.1	Introduction	119
7.2	Methods	121
7.2.1	Study population	121
7.2.2	Instrumentation	121
7.2.3	Study protocol	127
7.2.4	Data analysis	128
7.3	Results	129
7.3.1	Concurrent validity	130
7.3.2	Test-retest reliability	134
7.4	Discussion	136
8	Instrumented gait analysis of OA and TKA	143
8.1	Introduction	144
8.2	Methods	146
8.2.1	Study population	146
8.2.2	Instrumentation	147
8.2.3	Study protocol	148
8.2.4	Data analysis	151
8.3	Results	156
8.3.1	Discrimination of OA patients and healthy subjects	156
8.3.2	Discrimination of pre- and post-operative patients	159
8.3.3	Outcome prediction	163
8.3.4	Gait sub phase analysis	170
8.4	Discussion	173
9	Summary, Discussion and Conclusion	181
9.1	Summary and discussion of results	181
9.1.1	Gait sub phase evaluation	181
9.1.2	Evaluation of laterally wedged insoles	182
9.1.3	System accuracy evaluation	183
9.1.4	Instrumented gait analysis of OA and TKA	184

9.2	Discussion of contributions	185
9.2.1	From laboratory systems	185
9.2.2	... towards ambulatory systems	187
9.3	Outlook	188
9.3.1	Sensors for biomechanical analysis	189
9.3.2	Gait phase evaluation	189
9.3.3	Home environment applications	190
9.3.4	Clinical evaluation	191
9.3.5	Usability and acceptability evaluation	191
9.3.6	Ethical considerations	192
9.4	Conclusion	192
	Appendix	194
	Acronyms	203
	List of Figures	206
	List of Tables	209
	Bibliography	211
