

Contents

1. Introduction	1
2. Phenomenology of Bioenergetic Processes	4
2.1 Muscle Contraction	4
2.2 Active Transport of Ions	11
2.3 Substrate Phosphorylation	13
2.4 Membrane Phosphorylation	17
2.5 Formulation of the Main Physical Problems in Bioenergetics	28
3. Membrane Phosphorylation: Chemiosmotic Concept and Other Hypotheses	30
3.1 Survey of Existing Hypotheses	30
3.2 What is the Meaning of the Words: "Energy Coupling of Chemical Reactions"?	38
3.3 Transmembrane Electrochemical Potential, its Components and Physical Principles of its Utilization in Bioenergetic Processes ...	46
3.4 The Chemiosmotic Concept. Experimental Data Pro and Contra	50
3.4.1 Methods of $\Delta\psi$ Measurements	51
3.4.2 ΔpH , $\Delta\psi$, $\Delta\mu_{\text{H}^+}$ Values and Phosphorylation in Membrane Energy-Transducing Systems	56
3.4.3 Membrane Phosphorylation Caused by Various Types of "Strokes"	64
4. Proteins as Molecular Machines	69
4.1 The Physics of a Small Machine	71
4.2 Conformationally Nonequilibrium States of Proteins	73
4.2.1 Nonequilibrium States of Metal-Containing Proteins Trapped at Low Temperatures in a Frozen Matrix	76
4.2.2 Nonequilibrium States of Metal-Containing Proteins Recorded at Room Temperatures, and Kinetics of Their Relaxation	85
4.2.3 Chemical Properties of Metalloproteins in Conformationally Nonequilibrium States	89
4.3 Nonequilibrium Mixture of Molecules or Nonequilibrium Molecules? ...	92

5. Conformational Relaxation as the Elementary Act of Bioenergetic Processes	94
5.1 Muscle Contraction	94
5.1.1 The Simplest Quantum-Mechanical Machine Proposed by Gray and Gonda	96
5.1.2 Model: Two Particles in a Box with a Movable Partition	101
5.1.3 Automatic Regulation in a Model of the Quantum-Mechanical Machine	101
5.2 Active Transfer of Ions	104
5.3 Enzymatic Catalysis	107
5.3.1 Relaxation Concept of a Catalytic Act	107
5.3.2 Coherent Phonons and Catalytic Transformation	108
5.3.3 Free Energy Change During Chemical Transformation and the Conditions in which Machine Mechanisms are Advantageous	109
5.4 Membrane Phosphorylation	110
5.4.1 Model of a Redox Molecular Machine	111
5.4.2 Certain Corollaries Arising from the Relaxation Concept of Membrane Phosphorylation	114
6. Conclusion	119
