Contents

1. Introduction 1
1.1 What is Synergetics About? 1
1.2 Physics 1
1.2.1 Fluids: Formation of Dynamic Patterns 1
1.2.2 Lasers: Coherent Oscillations 6
1.2.3 Plasmas: A Wealth of Instabilities 7
1.2.4 Solid-State Physics: Multistability, Pulses, Chaos 8
1.3 Engineering 9
1.3.1 Civil, Mechanical, and Aero-Space Engineering: Post-Buckling Patterns, Flutter, etc. 9
1.3.2 Electrical Engineering and Electronics: Nonlinear Oscillations 9
1.4 Chemistry: Macroscopic Patterns 11
1.5 Biology 13
1.5.1 Some General Remarks 13
1.5.2 Morphogenesis 13
1.5.3 Population Dynamics 14
1.5.4 Evolution 14
1.5.5 Immune System 15
1.6 Computer Sciences 15
1.6.1 Self-Organization of Computers, in Particular Parallel Computing 15
1.6.2 Pattern Recognition by Machines 15
1.6.3 Reliable Systems from Unreliable Elements 15
1.7 Economy 16
1.8 Ecology 17
1.9 Sociology 17
1.10 What are the Common Features of the Above Examples? 17
1.11 The Kind of Equations We Want to Study 18
1.11.1 Differential Equations 19
1.11.2 First-Order Differential Equations 19
1.11.3 Nonlinearity 19
1.11.4 Control Parameters 20
1.11.5 Stochasticity 20
1.11.6 Many Components and the Mezoscopic Approach 22
1.12 How to Visualize the Solutions 23
1.13 Qualitative Changes: General Approach 32
1.14 Qualitative Changes: Typical Phenomena 36

Bibliografische Informationen
http://d-nb.info/830604774

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

1.14.1 Bifurcation from One Node (or Focus) into Two Nodes (or Foci) 37
1.14.2 Bifurcation from a Focus into a Limit Cycle (Hopf Bifurcation) 38
1.14.3 Bifurcations from a Limit Cycle 39
1.14.4 Bifurcations from a Torus to Other Tori 41
1.14.5 Chaotic Attractors 42
1.14.6 Lyapunov Exponents* 42
1.15 The Impact of Fluctuations (Noise). Nonequilibrium Phase Transitions 46
1.16 Evolution of Spatial Patterns 47
1.17 Discrete Maps. The Poincaré Map 49
1.18 Discrete Noisy Maps 56
1.19 Pathways to Self-Organization 56
1.19.1 Self-Organization Through Change of Control Parameters 57
1.19.2 Self-Organization Through Change of Number of Components 57
1.19.3 Self-Organization Through Transients 58
1.20 How We Shall Proceed 58

2. Linear Ordinary Differential Equations 61
2.1 Examples of Linear Differential Equations: The Case of a Single Variable 61
2.1.1 Linear Differential Equation with Constant Coefficient 61
2.1.2 Linear Differential Equation with Periodic Coefficient 62
2.1.3 Linear Differential Equation with Quasiperiodic Coefficient 63
2.1.4 Linear Differential Equation with Real Bounded Coefficient 67
2.2 Groups and Invariance 69
2.3 Driven Systems 72
2.4 General Theorems on Algebraic and Differential Equations 76
2.4.1 The Form of the Equations 76
2.4.2 Jordan's Normal Form 76
2.4.3 Some General Theorems on Linear Differential Equations 77
2.4.4 Generalized Characteristic Exponents and Lyapunov Exponents 79
2.5 Forward and Backward Equations: Dual Solution Spaces 81
2.6 Linear Differential Equations with Constant Coefficients 84
2.7 Linear Differential Equations with Periodic Coefficients 89
2.8 Group Theoretical Interpretation 93
2.9 Perturbation Approach* 96

3. Linear Ordinary Differential Equations with Quasiperiodic Coefficients* 103
3.1 Formulation of the Problem and of Theorem 3.1.1 103
3.2 Auxiliary Theorems (Lemmas) 106
3.3 Proof of Assertion (a) of Theorem 3.1.1: Construction of a Triangular Matrix: Example of a 2×2 Matrix 111
3.4 Proof that the Elements of the Triangular Matrix C are Quasiperiodic in τ (and Periodic in φ_j and C^k with Respect to φ): Example of a 2×2 Matrix 112
3.5 Construction of the Triangular Matrix C and Proof that Its Elements are Quasiperiodic in τ (and Periodic in φ_j and C^k with Respect to φ): The Case of an $m \times m$ Matrix, all λ's Different ... 115
3.6 Approximation Methods. Smoothing 118
3.6.1 A Variational Method 118
3.6.2 Smoothing 119
3.7 The Triangular Matrix C and Its Reduction 122
3.8 The General Case: Some of the Generalized Characteristic Exponents Coincide 129
3.9 Explicit Solution of (3.1.1) by an Iteration Procedure 134

4. Stochastic Nonlinear Differential Equations 143
4.1 An Example 143
4.2 The Îto Differential Equation and the Îto-Fokker-Planck Equation 146
4.3 The Stratonovich Calculus 150
4.4 Langevin Equations and Fokker-Planck Equation 153

5. The World of Coupled Nonlinear Oscillators 154
5.1 Linear Oscillators Coupled Together 154
5.1.1 Linear Oscillators with Linear Coupling 155
5.1.2 Linear Oscillators with Nonlinear Coupling. An Example. Frequency Shifts 156
5.2 Perturbations of Quasiperiodic Motion for Time-Independent Amplitudes (Quasiperiodic Motion Shall Persist) 158
5.3 Some Considerations on the Convergence of the Procedure* 165

6. Nonlinear Coupling of Oscillators: The Case of Persistence of Quasiperiodic Motion 172
6.1 The Problem 172
6.2 Moser's Theorem (Theorem 6.2.1) 179
6.3 The Iteration Procedure* 180

7. Nonlinear Equations. The Slaving Principle 187
7.1 An Example 187
7.1.1 The Adiabatic Approximation 188
7.1.2 Exact Elimination Procedure 189
7.2 The General Form of the Slaving Principle. Basic Equations 195

7.3 Formal Relations 198
7.4 The Iteration Procedure 202
7.5 An Estimate of the Rest Term. The Question of Differentiability 205
7.6 Slaving Principle for Discrete Noisy Maps* 207
7.7 Formal Relations* 208
7.8 The Iteration Procedure for the Discrete Case* 214
7.9 Slaving Principle for Stochastic Differential Equations* 216

8. Nonlinear Equations. Qualitative Macroscopic Changes 222
8.1 Bifurcations from a Node or Focus. Basic Transformations 222
8.2 A Simple Real Eigenvalue Becomes Positive 224
8.3 Multiple Real Eigenvalues Become Positive 228
8.4 A Simple Complex Eigenvalue Crosses the Imaginary Axis. Hopf Bifurcation 230
8.5 Hopf Bifurcation, Continued 233
8.6 Frequency Locking Between Two Oscillators 239
8.7 Bifurcation from a Limit Cycle 242
8.8 Bifurcation from a Limit Cycle: Special Cases 247
8.8.1 Bifurcation into Two Limit Cycles 247
8.8.2 Period Doubling 249
8.8.3 Subharmonics 249
8.8.4 Bifurcation to a Torus 251
8.9 Bifurcation from a Torus (Quasiperiodic Motion) 253
8.10 Bifurcation from a Torus: Special Cases 258
8.10.1 A Simple Real Eigenvalue Becomes Positive 258
8.10.2 A Complex Nondegenerate Eigenvalue Crosses the Imaginary Axis 260
8.11 Instability Hierarchies, Scenarios, and Routes to Turbulence ... 264
8.11.1 The Landau-Hopf Picture 264
8.11.2 The Ruelle and Takens Picture 265
8.11.3 Bifurcations of Tori. Quasiperiodic Motions 265
8.11.4 The Period-Doubling Route to Chaos. Feigenbaum Sequence 266
8.11.5 The Route via Intermittency 266

9. Spatial Patterns 267
9.1 The Basic Differential Equations 267
9.2 The General Method of Solution 270
9.3 Bifurcation Analysis for Finite Geometries 272
9.4 Generalized Ginzburg-Landau Equations 274
9.5 A Simplification of Generalized Ginzburg-Landau Equations. Pattern Formation in Bénard Convection 278

10. The Inclusion of Noise 282
10.1 The General Approach 282
10.2 A Simple Example 283

10.3 Computer Solution of a Fokker-Planck Equation for a Complex Order Parameter 286
10.4 Some Useful General Theorems on the Solutions of Fokker-Planck Equations 293
10.4.1 Time-Dependent and Time-Independent Solutions of the Fokker-Planck Equation, if the Drift Coefficients are Linear in the Coordinates and the Diffusion Coefficients Constant 293
10.4.2 Exact Stationary Solution of the Fokker-Planck Equation for Systems in Detailed Balance 294
10.4.3 An Example 298
10.4.4 Useful Special Cases 300
10.5 Nonlinear Stochastic Systems Close to Critical Points: A Summary 301

11. Discrete Noisy Maps 303
11.1 Chapman-Kolmogorov Equation 303
11.2 The Effect of Boundaries. One-Dimensional Example 304
11.3 Joint Probability and Transition Probability. Forward and Backward Equation 305
11.4 Connection with Fredholm Integral Equation 306
11.5 Path Integral Solution 307
11.6 The Mean First Passage Time 308
11.7 Linear Dynamics and Gaussian Noise. Exact Time-Dependent Solution of the Chapman-Kolmogorov Equation 310

12. Example of an Unsolvable Problem in Dynamics 312

13. Some Comments on the Relation Between Synergetics and Other Sciences 314

Appendix A: Moser's Proof of His Theorem 317
A.1 Convergence of the Fourier Series 317
A.2 The Most General Solution to the Problem of Theorem 6.2.1 319
A.3 Convergent Construction 321
A.4 Proof of Theorem 6.2.1 331
