

Contents

1. Introduction and Overview	1
---	----------

Part I Fundamental Concepts

2. Vector Algebra and Analysis in Curvilinear Coordinates	7
2.1 Introduction	7
2.2 Reciprocal Sets of Vectors	8
2.3 Curvilinear Coordinates	10
2.3.1 Transformation to Curvilinear Coordinates	10
2.3.2 Tangent-Basis Vectors	11
2.3.3 Reciprocal-Basis Vectors	14
2.3.4 Covariant and Contravariant Components of a Vector	15
2.4 Covariant and Contravariant "Vectors"	17
2.5 Vector Relationships in Curvilinear Coordinates	20
2.5.1 The Metric Coefficients g_{ij} and g^{ij}	20
2.5.2 The Jacobian	23
a) The Jacobian of the Curvilinear Coordinate System	23
b) The Relationship Between J and g	25
2.5.3 The Dot and Cross-Products in Curvilinear Coordinates	26
a) Dot Products	26
b) Cross Products	27
2.5.4 The Differential Elements $dl(i)$, $dS(i)$, d^3R	28
a) The Differential Arc Length $dl(i)$	28
b) The Differential Area Element $dS(i)$	28
c) The Differential Volume Element d^3R	29
2.6 Vector Differentiation in Curvilinear Coordinates	30
2.6.1 The Covariant Derivative	30
a) Differentiation of Vector Components and Basis Vectors	30
b) The Covariant Derivative in Terms of the Metric Coefficients	32
c) The Christoffel Symbols	34
2.6.2 The Del Operator	35
a) Definition of the Del Operator	35

b) Gradient	35
c) Divergence	36
d) Curl	36
2.7 The Parallel and Perpendicular Components of a Vector	37
2.8 A Summary of Vector Related Identities	38
3. Tensorial Objects	40
3.1 Introduction	40
3.2 The Concept of Tensors; A Pragmatic Approach	40
3.3 Dot Product, Double Dot Product, Contraction	44
3.4 The Relationship Between Covariant, Contravariant and Mixed Components	47
3.5 Special Tensors	48
3.5.1 The Kronecker Delta and the Metric Tensor	48
3.5.2 Levi-Civita and Christoffel Symbols	50
a) Levi-Civita Symbols	50
b) Christoffel Symbols	52
3.6 Tensor and Dyadic Identities	52
3.7 Suggestions for Further Reading	54
4. Magnetic-Field-Structure-Related Concepts	55
4.1 The Equation of a Magnetic-Field Line	55
4.2 The Frozen-Flux Theorem	56
4.3 The Magnetic Field-Line Curvature	58
4.4 Magnetic Pressure and Magnetic Tension	63
4.5 Magnetic Surfaces	64
a) Toroidal Systems	65
b) Open-Ended Systems	67
4.6 Curvilinear Coordinate Systems in Confinement Systems with "Simple" Magnetic Surfaces	67
4.6.1 Toroidal Systems	68
a) "The Cylindrical-Toroidal" or "Elementary" Toroidal System	68
b) Generalized Cylindrical-Toroidal Coordinates; Flux Coordinates	70
c) An Illustrative Example	73
d) (ϱ, β, I) Coordinates in Toroidal Systems	73
4.6.2 Open-Ended Systems	76
4.7 Magnetic-Surface Labeling	77
4.7.1 Toroidal Systems	77
4.7.2 Open-Ended Systems	82
4.8 The Rotational Transform in Toroidal Systems	82
4.9 The Flux-Surface Average	85
4.9.1 Toroidal Systems	86
4.9.2 Open-Ended Systems	89
4.9.3 Properties of the Flux-Surface Average	90
4.10 The Magnetic Differential Equation	93

Part II Flux Coordinates

5. The Clebsch-Type Coordinate Systems	100
5.1 Stream Functions	100
5.2 Generic Clebsch Coordinates	100
5.3 Relationship to the Contra- and Covariant Formalism	103
5.4 Boozer-Grad Coordinates	107
6. Toroidal Flux Coordinates	116
6.1 Straight Field-Line Coordinates	116
6.2 Symmetry Flux Coordinates in a Tokamak	122
6.3 Interlude: Non-Flux Coordinates in Tokamaks	126
6.4 Straight Current-Density-Line Coordinates	129
6.5 Covariant $\mathbf{B}$ Components and Their Relationship to the Boozer-Grad Form	131
6.5.1 The Vector Potential	131
6.5.2 Covariant $\mathbf{B}$ Components	133
6.5.3 Relationship to the Boozer-Grad Form	140
6.6 Boozer's Toroidal Flux Coordinates	142
6.7 Ideal-MHD-Equilibrium Conditions for Toroidally Confined Plasmas	146
6.8 Hamada Coordinates	150
7. Conversion from Clebsch Coordinates to Toroidal Flux Coordinates	156
7.1 The Generic Clebsch Coordinate System (ϱ, ν, I)	156
7.2 Boozer-Grad Coordinates (ϱ, ν, χ)	157
8. Establishment of the Flux-Coordinate Transformation; A Summary	160
8.1 Toroidal Systems	160
8.2 Open-Ended Systems	164
9. Canonical Coordinates or "Generalized Magnetic Coordinates" ..	165
9.1 Flux Coordinates Versus Canonical Coordinates	165
9.2 On the Existence of Flux Surfaces, Revisited	165
9.3 Flux Coordinates	166
9.4 Canonical Coordinates; The Field-Line Hamiltonian	170
9.5 Practical Evaluation of the Field-Line Hamiltonian	174

Part III Selected Topics

10. "Proper" Toroidal Coordinates	179
10.1 Introduction	179
10.2 Bipolar Coordinates: Intuitive Considerations	179

10.3 The Relationship of 3-D Spherical Coordinates to 2-D Polar Coordinates	181
10.4 "Proper" Toroidal Coordinates as a 3-D Version of Bipolar Coordinates	182
10.5 The Bipolar Coordinate System: A Detailed Analysis	183
11. The Dynamic Equilibrium of an Ideal Tokamak Plasma	186
11.1 Introduction	186
11.2 A Useful Identity in Tokamak Geometry	186
11.3 The Existence of an Electric Field in a Tokamak Plasma with Infinite Conductivity	187
11.4 Motion of the Plasma and the Flux Surfaces	190
11.4.1 Plasma Motion due to $E \times B$ Drift	190
11.4.2 Motion of Flux Surfaces Defined by the Poloidal Disk Flux Ψ_{pol}^d	191
11.4.3 Motion of Flux Surfaces Defined by the Poloidal Ribbon Flux Ψ_{pol}^r	192
11.4.4 Motion of Flux Surfaces Defined by the Toroidal Flux Ψ_{tor}	193
11.5 Constancy of the Rotational-Transform Flux Function	195
11.6 Remarks on the Evolution of a Finite-Resistivity Plasma ...	198
11.7 The Relationship Between Poloidal Disk and Ribbon Fluxes	199
12. The Relationship Between $\int dl/B$ and $dV/d\Psi_{\text{tor}}$	201
13. Transformation Properties of Vector and Tensor Components ...	204
13.1 Transformation of the Basis Vectors	204
13.2 Transformation of Vector Components	205
13.3 Transformation of Tensor Components	207
13.4 Transformation of Components of Special Tensors and Symbols	207
13.4.1 The Kronecker Delta	207
13.4.2 Metric Coefficients	208
13.4.3 Levi-Civita Symbols	208
13.4.4 Christoffel Symbols	209
14. Alternative Derivations of the Divergence Formula	211
14.1 A Straightforward Derivation of the Divergence Formula ...	211
14.2 Divergence-Formula Derivation Employing Christoffel Symbols	212
References	215
Subject Index	221
