

# Contents

<b>1. Introduction</b>	<b>1</b>
<b>2. The Ray Method</b>	<b>10</b>
2.1 The Basic Principles	10
2.2 Variational Theory of the Fermat Functional	13
2.3 The Solution of the Eikonal Equation; Ray Coordinates and the Geometrical Divergence	19
2.4 Integration of the Transport Equations	26
2.5 Maxwell's Equations	29
2.6 Determining the Short-Wavelength Asymptotic Solution of a Diffraction Problem Using the Ray Method – An Example	35
2.7 Determination of the Function $\psi_0$ by Using the Localization Principle	38
2.8 Caustics	39
2.9 Notes on the Literature	41
<b>3. The Field Near a Caustic</b>	<b>42</b>
3.1 Preliminary Remarks	42
3.2 The Etalon Problem for Caustics	43
3.3 The Ray Field and Eikonal in the Neighborhood of a Caustic	46
3.4 Derivation of the Recurrence Relations	54
3.5 The Field in the Vicinity of a Caustic – First Approximation	56
3.6 Determination of $A_j$ and $B_j$ for $j > 0$	60
3.7 Determination of the $\chi_j$	62
3.8 Notes on the Literature	64
<b>4. Derivation of Asymptotic Formulas for Eigenvalues and Eigenfunctions Using the Ray Method</b>	<b>66</b>
4.1 Introductory Remarks	66
4.2 Multi-Sheeted Covering Spaces	67
4.3 Single-Valuedness of the Eigenfunctions and Quantization Conditions	70
4.4 Eigenvalues and Eigenfunctions of a Circle	75
4.5 Eigenvalues of an Ellipse	81
4.6 Notes on the Literature	95

<b>5. The Ray Method "in the Small"</b> .....	97
5.1 Eigenfunctions of the Whispering Gallery Type .....	97
5.2 Eigenvalues of the Bouncing Ball Type .....	105
5.3 Eigenvalues of the Whispering Gallery Type for a Nonconstant Wave Velocity .....	114
5.4 Eigenvalues of the Bouncing Ball Type for a Nonconstant Wave Velocity .....	121
5.5 Notes on the Literature .....	129
 <b>6. The Parabolic Equation Method</b> .....	131
6.1 Introductory Remarks .....	131
6.2 Derivation of the Parabolic Equation for Eigenfunctions of the Whispering Gallery Type .....	132
6.3 Solution of the Parabolic Equation (6.2.9); Asymptotic Expansion of Eigenfunctions of the Whispering Gallery Type .....	135
6.4 Derivation of the Basic Parabolic Equation for the Case Where $S$ Is a Ray .....	138
6.5 Solution of the Parabolic Equation (6.4.8) .....	140
6.6 Notes on the Literature .....	143
 <b>7. Asymptotic Expansions of Eigenfunctions Concentrated Close to the Boundary of a Region</b> .....	145
7.1 Introductory Remarks .....	145
7.2 Eigenfunctions of the Circle for the Case $c = \text{const}$ .....	146
7.3 Construction of Solutions of the Helmholtz Equation in a Boundary Layer .....	150
7.4 Eigenfunctions of the Whispering Gallery Type .....	161
7.5 Eigenfunctions of the Region Exterior to $\Omega$ .....	168
7.6 Justification of the Asymptotic Formulas .....	173
7.7 Notes on the Literature .....	178
 <b>8. Eigenfunctions Concentrated in the Neighborhood of an Extremal Ray of a Region</b> .....	180
8.1 The Etalon Problem .....	180
8.2 Construction of the Principal Terms of the Formal Series ...	182
8.3 Construction of the Polynomials $\alpha_m$ and $\beta_m$ , $m \geq 1$ .....	189
8.4 Basic Results and Some of Their Consequences .....	193
8.5 Formulation of the Boundary Value Problem and Derivation of the Eigenvalue Equation .....	195
8.6 Formulas for Eigenvalues and Eigenfunctions in the First Approximation .....	201
8.7 Procedure for Constructing the Polynomials $\alpha_m(s, \nu)$ and $\beta_m(s, \nu)$ for $m \geq 1$ .....	208

8.8	Natural Frequencies of an Open Resonator (Inhomogeneous Filling, Higher Approximations) .....	211
8.9	Notes on the Literature .....	213
<b>9.</b>	<b>Eigenfunctions Concentrated in the Vicinity of a Closed Geodesic .....</b>	<b>214</b>
9.1	Formulation of the Problem and Derivation of the Parabolic Equation .....	214
9.2	The Jacobi Equation for the Geodesic $l$ .....	220
9.3	The Zero-Order Approximation .....	227
9.4	Construction of the Higher Approximations .....	235
9.5	The Eigenfunction Problem in a Three-Dimensional Region ..	239
9.6	Asymptotic Solution of a System of Elliptic Equations on a Riemannian Manifold, Concentrated Near a Ray .....	246
9.7	Notes on the Literature .....	256
<b>10.</b>	<b>Multiple-Mirror Resonators .....</b>	<b>258</b>
10.1	The Multiple-Mirror Resonator and Formulation of the Problem ..	258
10.2	Conditions of Resonator Stability in the First Approximation ..	261
10.3	Some Properties of the Solutions of (10.2.16) on $l_N$ .....	268
10.4	Formulation of the Parabolic Equation for the Problem .....	270
10.5	Integration of the Equation $\mathcal{L}V = 0$ .....	273
10.6	Eigenfunctions and Natural Frequencies of a Multiple-Mirror Resonator in the First Approximation ..	274
10.7	Construction of the Higher Approximations .....	278
10.8	Notes on the Literature .....	284
<b>11.</b>	<b>The Field of a Point Source Located Near a Convex Curve ...</b>	<b>285</b>
11.1	Introduction .....	285
11.2	The Green's Function for the Exterior of a Circle .....	286
11.3	Creeping Waves Near a Curve with Positive Curvature and Their Extension to Arbitrary Distances .....	293
11.4	An Expression for the Green's Function in Terms of Creeping Waves .....	297
11.5	The Green's Function for the Diffraction Problem at a Cylinder with Variable Impedance .....	302
11.6	Notes on the Literature .....	305
<b>12.</b>	<b>Asymptotic Expansion of the Green's Function for a Surface Source (the Internal Problem) .....</b>	<b>306</b>
12.1	Formulation of the Problem and Physical Assumptions .....	306
12.2	The Ray Formula for Multiply Reflected Waves .....	307
12.3	Refinement of the Ray Formula .....	314
12.4	Field of a Source Located on the Boundary of a Circle .....	326

12.5	Field of a Surface Source Close to the Concave Boundary of an Inhomogeneous Body .....	342
12.6	Notes on the Literature .....	355
<b>13.</b>	<b>The High-Frequency Asymptotics of the Field Scattered by a Smooth Body .....</b>	<b>357</b>
13.1	The Etalon Problem .....	357
13.2	Construction of Approximate Caustic Sums – Equations for the Expansion Coefficients .....	364
13.3	Asymptotic Evaluation of the Integral $I_1$ , in the Vicinity of the Terminator $C$ .....	370
13.4	Choice of the Initial Data; Fock's Formula .....	375
13.5	Transformation of the Integrals $I_1$ and $I_2$ in the Neighborhood of the Light-Shadow Boundary .....	380
13.6	Calculation of the Derivatives of $\tau^+(M, \gamma)$ and $u^+(M, \gamma)$ on $\Sigma^+$ .....	383
13.7	The Fresnel-Fock Formula in the Neighborhood of the Light-Shadow Boundary .....	388
13.8	Asymptotics of the Field in the Deep Shadow .....	392
13.9	Notes on the Literature .....	398
<b>Appendix</b>	.....	<b>400</b>
A.1.	The Airy Equation and Airy Functions .....	400
A.2.	Nonorthogonal Curvilinear Coordinate Systems .....	417
A.3.	Solution of the Equation $y''(s) + K(s)y(s) = y^{-3}(s)$ .....	422
A.4.	Computation of and Tables for the Function $G_M(\gamma)$ .....	424
<b>References</b>	.....	<b>431</b>
<b>Subject Index</b>	.....	<b>443</b>
