

Part I Introduction to Modern Astrophysics

1	Some Important Physical Fundamentals	3
1.1	Overview	3
1.2	Orders of Magnitude and Model Areas	15
1.2.1	Spatial and Temporal Scales	15
1.2.2	Forces and Energy Scales	21
1.2.3	Gravitation	25
1.2.4	Model Formation	29
1.3	Astrophysical Structures	33
1.3.1	The Universe as a Whole	33
1.3.2	Virial Theorem	42
1.3.3	Size of Structures	44
1.4	Radiation and Brightness	55
1.4.1	Photons in Equilibrium	56
1.4.2	Brightness and Magnitude Classes	64
1.4.3	Hertzprung-Russell Diagram	70
1.5	Radiation and Energy Transport	73
1.5.1	Radiation Transport Equation	73
1.5.2	Diffusion Models for Transport	81
1.5.3	Convective Transport	86
2	Observation Opportunities	91
2.1	Classical Methods	91
2.1.1	Methods of Distance Determination	92
2.1.2	Highly Simplified Models for Cepheids	103
2.1.3	Determination of Mass	109
2.1.4	Radius Determination	110
2.1.5	Surface Temperature	111
2.1.6	Velocity Determination	111
2.2	Observation Instruments	114
3	Cosmic Radiation	133
3.1	Overview	133
3.2	Acceleration Mechanisms	141

3.2.1	Acceleration through Magnetic Mirrors	142
3.2.2	Fermi Acceleration.	150
4	Star Structure and Star Development.	157
4.1	Basic Equations for Luminous Stars	158
4.1.1	Star Structure Equations.	160
4.1.2	Equations of State	163
4.1.3	Stellar Structure Equations and Virial Theorem.	168
4.2	Stellar Energy Sources.	169
4.2.1	Basics.	170
4.2.2	Fusion Processes in Stars.	181
4.3	Our Sun	185
4.3.1	Solar Parameters.	185
4.3.2	Transport and Stability.	188
4.3.3	Solar Atmosphere.	191
4.3.4	Helioseismology.	197
4.3.5	Prototype of a Standard Solar Model.	198
4.3.6	Solar Neutrinos	201
4.3.7	Outlook.	202
4.4	Equations of State and Chandrasekhar Mass.	204
4.4.1	Ideal Classical Gas.	205
4.4.2	Ideal Quantum Gases	209
4.4.3	White Dwarfs	216
4.4.4	Polytropic Equations of State.	219
4.4.5	Chandrasekhar Mass	221
4.4.6	Dense Coulomb Systems	229
4.4.7	Neutrons Come Into Play.	238
4.5	Structure Formation	242
4.5.1	Qualitative Statements	242
4.5.2	Jeans Instability	246
4.6	Star Evolution: Beginnings	253
4.6.1	Development of Protostars.	254
4.6.2	Hertzsprung-Russell Diagram	259
4.6.3	Solution of the Stellar Structure Equations	263
4.6.4	Mass Limits	273
5	Final Stages of Luminous Stars.	279
5.1	Dying Stars.	280
5.1.1	White Dwarfs	280
5.1.2	Neutron Stars	292
5.1.3	Sources of High-Intensity Radiation	303
5.2	Black Holes	310
6	Galaxies	319
6.1	The Milky Way.	319
6.2	General Properties of Galaxies	325

6.2.1	Galaxy Observation	326
6.2.2	Olbers's Paradox	332
6.2.3	Matter Balance	336
6.3	Modeling	340

Part II Introduction to the General Theory of Relativity

7	Calculation Rules of GRT	347
7.1	Mathematical Terminology of SRT	347
7.1.1	Lorentz Transformation	348
7.1.2	Accelerated Reference Systems	355
7.2	Einstein's Field Equations	357
7.2.1	Principles	358
7.2.2	The Field Equations "Fall From the Sky"	363
7.3	Newtonian Limit Case	368
7.3.1	Equation of Motion	369
7.3.2	Determination Equation for the Potential	370
7.4	Structure of the Einstein Field Equations	372
7.4.1	Mathematical Background	374
7.4.2	The Source Term	380
7.4.3	Covariance of the Equation of Motion	383
7.5	Field Equations and Variational Principle	386
7.5.1	Metric Determinant	386
7.5.2	Homogeneous Einstein Equations	387
7.5.3	Energy-Momentum Tensor	389
7.5.4	Cosmological Constant	390
7.5.5	Notations in Comparison	391
8	GRT Effects	393
8.1	Outer Schwarzschild Metric	393
8.1.1	Metric Coefficients	393
8.1.2	Particles in the Schwarzschild field	396
8.2	Perihelion Precession of Mercury	403
8.3	Light in the Gravitational Field	406
8.3.1	Light Deflection in the Gravitational Field	406
8.3.2	Frequency Shift	411
8.3.3	Travel Time Delay	413
8.4	Gravitational Waves	415
8.4.1	Wave equation in matter-free Space	416
8.4.2	Gauge, Polarization and Generation	417
8.4.3	Detection Methods	427
9	Relativistic Star Dynamics	437
9.1	Relativistic Stellar Equilibria	437
9.1.1	Inner Schwarzschild Metric	438
9.1.2	Relativistic Equilibria	444

9.1.3	Stability	448
9.2	Gravitational Collapse	457
9.2.1	Time-Dependent Metrics	458
9.2.2	Time-dependent solutions	464
9.3	Rotating Black Holes	469
9.3.1	Basics	470
9.3.2	Kerr Metric	471
9.3.3	Current Research on Black Holes	473

Part III Introduction to Cosmology

10	Homogeneous Cosmology	479
10.1	Starting Point for Cosmological Approaches	479
10.2	Friedmann-Lemaître Equations	482
10.2.1	Robertson-Walker Metric	482
10.2.2	Friedmann-Lemaître Equations	486
10.2.3	Historical Review	488
10.2.4	Friedmann equation for $P = 0$	490
10.2.5	Friedmann Equation with Three Components	496
10.2.6	Universe with Radiation Dominance	500
10.2.7	Dominance of Matter	502
10.2.8	From Radiation to Matter Dominance	503
10.2.9	Cosmography	504
10.3	World Models	506
10.3.1	Cosmological Constant	507
10.3.2	Schwarzschild-deSitter Space	510
10.3.3	Solutions of the Friedmann-Lemaître Equations	510
11	Primordial Nucleosynthesis	521
11.1	Basics	522
11.1.1	Building Blocks of the Universe	522
11.1.2	Degrees of Freedom	525
11.2	Thermal development of the young universe	527
11.2.1	The first fractions of seconds	528
11.2.2	Freezing Out of Degrees of Freedom	537
11.3	The Universe Becomes “Adult”	542
12	Supernovae Surveys	545
12.1	Distance Measures	545
12.2	Observation Lengths	552
12.3	Evaluations	556
12.3.1	Luminosity Distance and Redshift	556
12.3.2	Observations	559

13	Cosmic Microwave Background Radiation	561
13.1	Observations	561
13.2	First Analyses	569
13.2.1	Temperature and Scale Factor	569
13.2.2	Decoupling Model	571
13.2.3	CMB Horizon Problem	573
14	Inflation	575
14.1	Approaches	575
14.1.1	Conformal Time	576
14.1.2	Phenomenology of Inflation	580
14.2	Inflaton Field in Classical Description	587
14.2.1	Normalizations and Conventions	587
14.2.2	Model	590
14.2.3	Approximate Solution	592
14.2.4	Resolution of Important Cosmological Problems	596
14.2.5	Flatness Problem	597
14.2.6	Monopole Problem	598
15	Inhomogeneous Cosmology	599
15.1	Newtonian Subhorizon Disturbances	600
15.1.1	Jeans Calculation with Expanding Background	600
15.1.2	Jeans Mass	602
15.1.3	Behavior of Dark Matter	607
15.2	Basics of Inhomogeneous Cosmology	608
15.2.1	Disturbed Metric Coefficients	609
15.2.2	Gauge Freedom	611
15.2.3	Perturbed Energy-Momentum Tensor	616
15.2.4	Perturbed Einstein Equations	622
15.3	Information Transfer from the Early Phase	627
15.3.1	Development of the Curvature Disturbance	628
15.3.2	Entry into the Horizon	631
15.3.3	Spectral Distributions	641
15.4	Quantum Fluctuations	648
15.4.1	Relationship between $\mathcal{R}$ and $\delta\phi$	648
15.4.2	Subhorizon-like Field Fluctuations	649
15.4.3	Curvature Scalar	651
15.5	Phenomenology	654
15.5.1	Density and Mass Accumulations	654
15.5.2	Galaxy Surveying	656
15.5.3	Fluctuations in the CMB	660
15.5.4	Polarization in the CMB	668
	References	673
