1	Graphs and Algorithms in Communication Networks on Seven League Boots	1
	Arie M. C. A. Koster and Xavier Muñoz	
1.1	Introduction	1
1.2	Mathematical Modeling	3
1.2.1	Sets and Parameters	3
1.2.2	Graphs and Networks	4
1.2.3	Mathematical Problems	7
1.2.4	Distributed Problems	9
1.2.5	Online Decision Problems	10
1.3	Computational Complexity	11
1.4	Combinatorial Optimization Methods	13
1.4.1	Linear-Programming-Based Methods	14
1.4.2	Graph Theory	22
1.4.3	Combinatorial Algorithms	23
1.4.4	Approximation Algorithms	23
1.4.5	Heuristics Without Solution Guarantee	24
1.4.6	Nonlinear Programming	24
1.5	Selected Classical Applications in Communication Networks	25
1.5.1	Design of Network Topologies	25
1.5.2	Network Routing Problems	29
1.5.3	Network Planning Problems	38
1.5.4	A Randomized Cost Smoothing Approach for Optical Network Design	40
1.5.5	Wireless Networking	46
1.6	Emerging Applications in Communication Networks	53
1.6.1	Broadband and Optical Networks	53
1.6.2	Wireless and Ad Hoc Networks	55
	References	56

Part I Studies in Broadband and Optical Networks

2	Traffic Grooming: Combinatorial Results and Practical Resolutions .	63
	Tibor Cinkler, David Coudert, Michele Flammini, Gianpiero Monaco, Luca Moscardelli, Xavier Muñoz, Ignasi Sau, Mordechai Shalom, and Shmuel Zaks	
2.1	Introduction	64
2.2	Problem Definition and Examples	66
2.3	Minimizing the Usage of Light Termination Equipment	70
2.3.1	Path	70
2.3.2	Ring	71
2.3.3	General Topology	71
2.3.4	Online Traffic	72
2.3.5	Price of Anarchy	72
2.4	Minimizing the Number of Add/Drop Multiplexers	73
2.4.1	Complexity and Inapproximability Results	74
2.4.2	Approximation Results	75
2.4.3	Specific Constructions	76
2.4.4	A Priori Placement of the Equipment	77
2.5	Multilayer Traffic Grooming for General Networks	78
2.5.1	Multilayer Mesh Networks	79
2.5.2	On Grooming in Multilayer Mesh Networks	80
2.5.3	Graph Models for Multilayer Grooming	81
2.6	Conclusion	87
	References	88
3	Branch-and-Cut Techniques for Solving Realistic Two-Layer Network Design Problems	95
	Sebastian Orlowski, Christian Raack, Arie M. C. A. Koster, Georg Baier, Thomas Engel, and Pietro Belotti	
3.1	Introduction	96
3.2	Mathematical Model	98
3.2.1	Mixed-Integer Programming Model	98
3.2.2	Preprocessing	101
3.3	MIP-Based Heuristics Within Branch-and-Cut	103
3.3.1	Computing Capacities over a Given Flow	103
3.3.2	Rerouting Flow to Reduce Capacities	104
3.4	Cutting Planes	105
3.4.1	Cutting Planes on the Logical Layer	105
3.4.2	Cutting Planes on the Physical Layer	108
3.5	Computational Results	109
3.5.1	Test Instances and Settings	109
3.5.2	Unprotected Demands	110
3.5.3	Protected Demands	113
3.5.4	Preprocessing and Heuristics	114

3.6	Conclusions	116
	References	116
4	Routing and Label Space Reduction in Label Switching Networks ..	119
	Fernando Solano, Luis Fernando Caro, Thomas Stidsen, and Dimitri Papadimitriou	
4.1	Introduction to Label Switching	119
4.2	Functional Description of the Technologies	121
4.2.1	Multi-protocol Label Switching Traffic Engineering (MPLS-TE)	121
4.2.2	All-Optical Label Switching (AOLS)	122
4.2.3	Ethernet VLAN-Label Switching (ELS)	122
4.3	Methods for Scaling the Usage of the Label Space	123
4.3.1	Label Merging	123
4.3.2	Label Stacking	124
4.4	Considering Routing	126
4.5	Generic Model	128
4.5.1	Parameters and Variables	128
4.5.2	Integer Linear Program for the Network Design Problem	129
4.5.3	Traffic Engineering Formulation	130
4.5.4	No Label Stacking	131
4.6	Simulation Results	131
4.6.1	MPLS-TE	131
4.6.2	AOLS	132
4.6.3	ELS	134
4.7	Conclusions and Future Work	135
	References	136
5	Network Survivability: End-to-End Recovery Using Local Failure Information	137
	José L. Marzo, Thomas Stidsen, Sarah Ruepp, Eusebi Calle, Janos Tapolcai, and Juan Segovia	
5.1	Basic Concepts on Network Survivability	138
5.1.1	Protection and Restoration	138
5.1.2	The Scope of Backup Paths	139
5.1.3	Shareability of Protection Resources	140
5.2	The Failure-Dependent Path Protection Method	141
5.2.1	Recovery Based on the Failure Scenario	141
5.2.2	Path Assignment Approaches	143
5.2.3	General Shared Risk Groups (SRG)	143
5.2.4	The Input of the Problem	144
5.2.5	Two-Step Approaches	145
5.2.6	Joint Optimization: The Greedy Approach	146
5.3	Multi-commodity Connectivity (MCC)	147

5.3.1	Complexity of the Multi-commodity Connectivity Problem	148
5.3.2	The SPH Approach	149
5.3.3	ILP of the Multi-commodity Connectivity Problem	150
5.3.4	Examples	151
5.4	Case Studies	151
5.4.1	First Case Study: Shortcut Span Protection	152
5.4.2	The Shortcut Span Protection Model	153
5.4.3	Results	154
5.4.4	Second Case Study: Connection Availability Under Path Protection	156
	References	160
6	Routing Optimization in Optical Burst Switching Networks: a Multi-path Routing Approach	163
	Miroslaw Klinkowski, Marian Marciniak, and Michał Pióro	
6.1	Introduction	164
6.2	OBS Technology	165
6.2.1	Routing Methods	165
6.3	Network Modeling	166
6.3.1	Link Loss Calculation	167
6.3.2	Network Loss Calculation	168
6.3.3	Multi-path Source Routing	169
6.4	Resolution Methods and Numerical Examples	170
6.4.1	Formulation of the Optimization Problem	170
6.4.2	Calculation of Partial Derivatives	171
6.4.3	Numerical Results	173
6.5	Discussion	174
6.5.1	Accuracy of Loss Models	174
6.5.2	Properties of the Objective Function	175
6.5.3	Computational Effort	176
6.6	Conclusions	177
	References	177
7	Problems in Dynamic Bandwidth Allocation in Connection Oriented Networks	179
