

TABLE OF CONTENTS

CHAPTER 1 INTRODUCTION

1.1	Historical Background.....	1
1.2	Stability.....	3
1.3	Experimental and Numerical Modelling.....	4
1.4	The Boundary Element Method.....	6
1.5	Plate Stability by BEM.....	8
1.6	Scope of the Present Work.....	9

CHAPTER 2 PLATE STABILITY THEORY

2.1	Introduction.....	11
2.2	Stability of Structural Systems.....	11
2.3	Linear Theory.....	15
2.4	Large Deflections.....	24
2.5	Boundary Conditions.....	26
	2.5.1 Out-of-Plane Boundary Conditions.....	27
	2.5.2 In-Plane Boundary Conditions.....	31
2.6	Numerical and Experimental Studies.....	35
2.7	Conclusions.....	37

CHAPTER 3 MEMBRANE STATE OF STRESS

3.1	Introduction.....	38
3.2	Boundary Integral Formulation.....	38
3.3	Boundary Element Solution.....	43
3.4	Numerical Implementation.....	47
3.5	Results.....	48
3.6	Conclusions.....	52

CHAPTER 4 CRITICAL LOADS

4.1	Introduction.....	54
4.2	Boundary Integral Formulation.....	54
4.3	Boundary Element Solution.....	59
4.3.1	Modelling of Boundary Unknowns.....	59
4.3.2	Domain Deflection Models.....	60
4.3.2.1	Continuous Cells.....	63
4.3.2.2	Discontinuous Cells.....	66
4.3.3	Free Boundary.....	67
4.3.4	Eigenvalue Problem.....	68
4.4	Numerical Implementation.....	72
4.5	Results.....	74
4.5.1	Optimum Nodal Position in Discontinuous Elements	76
4.5.2	Performance of the Various Interpolation Models	79
4.5.3	Convergence of Results from the Linear Discontinuous Model.....	81
4.5.4	Comparison with Exact Solutions.....	83
4.5.5	Comparison with the Finite Element Method.....	86
4.6	Conclusions.....	88

CHAPTER 5 DUAL RECIPROCITY

5.1	Introduction.....	89
5.2	Outline of the Method.....	90
5.3	The Discrete Points Fourier Analysis.....	93
5.3.1	The One-Dimensional Fourier Series.....	93
5.3.2	The Two-Dimensional Fourier Series.....	94
5.3.3	The Discrete Points Two-Dimensional Fourier Analysis.....	96
5.4	The Deflection Models.....	99
5.4.1	The Trigonometric Deflection Model.....	99
5.4.2	The Nodal Deflection Model.....	104
5.5	Transformation of $L(w)$	108

VII

5.6	Transformation of the Domain Integral.....	109
5.7	The Problem of Singular Integrals.....	112
5.8	Eigenvalue Problem.....	113
5.9	Numerical Implementation.....	115
5.10	Results.....	118
5.10.1	Convergence of the Fourier Transformation.....	119
5.10.2	Convergence of the Transformed Integrals.....	124
5.10.3	Examples of Critical Loads.....	133
5.10.3.1	The Trigonometric Deflection Model.....	134
5.10.3.2	The Nodal Deflection Model.....	141
5.10.3.3	The Plates Deflected Shape.....	145
5.11	Conclusions.....	149
 CHAPTER 6 LARGE DEFLECTIONS		
6.1	Introduction.....	151
6.2	Boundary Integral Formulation.....	152
6.3	Domain Deflection Models.....	155
6.4	Boundary Element Solution.....	162
6.5	Solution of the System of Equations.....	165
6.6	Numerical Implementation.....	168
6.7	Results.....	170
6.8	Conclusions.....	177
 CHAPTER 7 CONCLUSIONS.....		
		178
 APPENDIX A The Green's Identities.....		
		185
 APPENDIX B Functions of the Fundamental Solutions.....		
		187
 APPENDIX C Trigonometric Deflection Functions.....		
		191
 REFERENCES.....
