

Contents

1. Introduction	1
2. Molecular Energy States	5
2.1 The Molecular-Motion Equation, and the Hamiltonian Operator	5
2.2 Molecular Electronic States	6
2.3 Molecular Vibrational Levels	10
2.4 Molecular Rotational Levels	14
2.5 Molecular Vibration-Rotational Levels	18
2.6 Coupling of Molecular Rotation and Electronic Motion	19
2.7 Perturbations	22
2.8 Quadrupole Hyperfine Structure of Molecules	27
2.9 Magnetic Dipole Hyperfine Structure in Molecules	29
2.10 Isotopic Energy-Level Shifts	31
2.11 Molecular Rydberg States	33
3. Linear Molecular Spectroscopy	42
3.1 Infrared Pure-Rotational Spectra	42
3.2 Infrared Vibrational Spectra	43
3.3 Infrared Vibration-Rotational Spectra	44
3.4 Vibrational Band Systems of Diatomic Molecules	48
3.5 Rotational Spectra of Electronic Bands of Diatomic Molecules	50
3.6 Electric Quadrupole and Magnetic Dipole Hyperfine Spectra of Molecules	51
3.7 The Goals for Experimental Studies of Molecular Spectroscopy	52
3.8 Advances of Molecular Spectroscopy Through Linear Interaction of Molecules with Lasers	53
4. Spectral Characteristics of Molecular Two-Photon Transitions	62
4.1 Classification of Equal-Frequency Molecular Two-Photon Transitions	63
4.2 Excitation Probability of a Two-Photon Transition with One Near-Resonant Enhancing Level	66
4.3 Coarse Structure of Near-Resonantly Enhanced Molecular Two-Photon Absorption Spectra	74

4.4	Fine Structure of Near-Resonantly Enhanced Molecular Two-Photon Transitions	83
4.5	Line Shapes and Higher-Order Corrections for Near-Resonant Two-Photon Transitions in Three-Level Systems	89
4.6	Molecular Two-Photon Transitions Enhanced by Mixing Levels	93
4.7	Semiclassical Theory for a Two-Photon Transition in a Four-Level System	101
4.8	Coherent Effects on the Line Shape of a Near-Resonant Two-Photon Transition in a Four-Level System	104
5.	Molecular Nonlinear Uncoupling Spectra with Doppler-Free Spectroscopy	108
5.1	Doppler-Free Saturation Spectroscopy and Its Development	109
5.1.1	Intensity Modulation Labelling	111
5.1.2	Frequency Modulation Labelling	117
5.1.3	Beam-Overlapping Modulation Labelling	121
5.2	Doppler-Free Polarization Spectroscopy and Its Development	123
5.3	Doppler-Free Two-Photon Spectroscopy and Its Development	129
5.4	Superhigh-Resolution Spectroscopy with Separated Fields	137
5.5	Applications of Nonlinear High-Resolution Laser Spectroscopy to Studies of Molecular Spectra	141
5.5.1	Accurate Measurements of the Properties of Perturbed Vibration-Rotational Bands in Diatomic Molecules	141
5.5.2	Accurate Studies of Molecular Hyperfine Spectra	147
5.5.3	Quantitative Study of Molecular Collision Mechanisms	152
5.5.4	Study of Spectroscopic Effects due to External Fields	157
5.5.5	General Features of the Applications of Doppler-Free Spectroscopy to the Study of Molecular Spectra and Molecular Structure	159
6.	Molecular Nonlinear Coupling Spectral Effects	161
6.1	Background	161
6.2	Nonlinear Coupled Interaction in Three-Level Systems	162
6.3	Nonlinear Coupled Interaction in Four-Level Systems	165
6.4	Stimulated Diffuse Band Radiation via Various Excitation Processes	169
6.5	Stimulated and Coherent Radiation by Hybrid Excitation in Molecule-Atom Ensembles	174
6.5.1	Equal-Frequency Two-Step Hybrid Resonance Pumping	174
6.5.2	Unequal-Frequency Two-Step Hybrid Resonance Pumping	176
6.5.3	Two-Step Hybrid Off-Resonance Pumping	177
6.5.4	Four-Wave Mixing Following Two-Step Hybrid Excitation	181
6.5.5	Molecule-Atom Collisional Energy-Transfer Processes	184

6.6	Optically Pumped Stimulated Radiation Based on Molecular Electronic Transitions	188
6.7	Lasers Based on Molecular Photodissociation	197
6.8	Optically Pumped Far-Infrared Lasers Based on Pure Rotational Molecular Transitions	201
6.9	Optically Pumped Mid-Infrared Laser Based on Molecular Vibration-Rotational Transitions	204
6.10	Applications of Coherent Transient Spectroscopy in the Measurement of Molecular Parameters	206
6.10.1	Determination of Dipole Moments for Molecular Transitions	206
6.10.2	Lifetime of the Upper Level of a Molecular Transition	207
6.10.3	Determination of Transition Relaxation	207
6.10.4	The Fine or Hyperfine Splitting of Molecular-Spectral Lines	208
6.10.5	Study of Weak Intramolecular Coupling	208
6.10.6	Measurement of Ultrafast Inter- or Intra-Molecular Processes by Novel Transient Techniques	209
7.	Simplification and Identification of Molecular Spectra	210
7.1	Laser-Induced Fluorescence	212
7.1.1	Formation and Classification of Resonant Fluorescence	212
7.1.2	Measurements and Applications	217
7.2	Population Labelling	218
7.3	Polarization Labelling	221
7.4	Two-Step Polarization Labelling	232
7.5	Modulated Polarization Two-Photon Spectroscopy	236
7.6	Molecular Energy Level Information Provided by Selective Simplified Molecular Spectra	241
7.7	Comprehensive Identification of Equal-Frequency Molecular Two-Photon Transitions	245
7.7.1	Approximate Numerical Calculations for Predicting Observable Molecular Two-Photon Absorption Frequencies	245
7.7.2	Experimental Methods	247
7.7.3	Examination of the Population Paths of a Fine Level for a Two-Photon Transition	252
