

Contents

11. Fluid Dynamics: The Governing Equations	1
11.1 Physical Properties of Fluids	1
11.2 Equations of Motion	5
11.2.1 Continuity Equation	5
11.2.2 Momentum Equations: Inviscid Flow	6
11.2.3 Momentum Equations: Viscous Flow	8
11.2.4 Energy Equation	10
11.2.5 Dynamic Similarity	12
11.2.6 Useful Simplifications	14
11.3 Incompressible, Inviscid Flow	16
11.4 Incompressible Boundary Layer Flow	20
11.4.1 Laminar Boundary Layer Flow	20
11.4.2 Turbulent Boundary Layer Flow	22
11.4.3 Boundary Layer Separation	24
11.5 Incompressible, Viscous Flow	26
11.5.1 Laminar Flow	28
11.5.2 Turbulent Flow	31
11.6 Compressible Flow	33
11.6.1 Inviscid Compressible Flow	33
11.6.2 Compressible Boundary Layer Flow	37
11.6.3 Compressible Viscous Flow	38
11.6.4 Boundary Conditions for Compressible Viscous Flow	40
11.7 Closure	42
11.8 Problems	42
12. Generalised Curvilinear Coordinates	47
12.1 Transformation Relationships	49
12.1.1 Generalised Coordinates	49
12.1.2 Metric Tensor and the Physical Features of the Transformation	51
12.1.3 Restriction to Orthogonal and Conformal Coordinates	53
12.2 Evaluation of the Transformation Parameters	55
12.2.1 Centred-Difference Formulae	56
12.2.2 Finite Element Evaluation	57
12.2.3 Finite Volume Evaluation	59
12.2.4 Additional Errors Associated with the Use of Generalised Coordinates	60

12.3 Generalised Coordinate Structure of Typical Equations	64
12.3.1 General First-Order Partial Differential Equation	64
12.3.2 General Second-Order Partial Differential Equation	65
12.3.3 Equations Governing Fluid Flow	67
12.4 Numerical Implementation of Generalised Coordinates	69
12.4.1 LAGEN: Generalised Coordinate Laplace Equation	69
12.5 Closure	77
12.6 Problems	78
13. Grid Generation	81
13.1 Physical Aspects	83
13.1.1 Simply-Connected Regions	83
13.1.2 Multiply-Connected Regions	86
13.2 Grid Generation by Partial Differential Equation Solution	89
13.2.1 Conformal Mapping: General Considerations	89
13.2.2 Sequential Conformal Mapping	90
13.2.3 One-Step Conformal Mapping	93
13.2.4 Orthogonal Grid Generation	97
13.2.5 Near-Orthogonal Grids	99
13.2.6 Solution of Elliptic Partial Differential Equations	100
13.3 Grid Generation by Algebraic Mapping	104
13.3.1 One-Dimensional Stretching Functions	105
13.3.2 Two Boundary Technique	106
13.3.3 Multisurface Method	108
13.3.4 Transfinite Interpolation	112
13.4 Numerical Implementation of Algebraic Mapping	114
13.4.1 ALGEM: Grid Generation for a Streamlined Body	115
13.5 Closure	123
13.6 Problems	125
14. Inviscid Flow	128
14.1 Panel Method	129
14.1.1 Panel Method for Inviscid Incompressible Flow	130
14.1.2 PANEL: Numerical Implementation	134
14.1.3 Connection with the Boundary Element Method	141
14.1.4 Lifting Aerofoil Problem	142
14.1.5 Higher-Order Panel Methods and the Extension to Three Dimensions	144
14.1.6 Panel Method for Inviscid, Compressible Flow	146
14.2 Supersonic Inviscid Flow	147
14.2.1 Preliminary Considerations	147
14.2.2 MacCormack's Predictor-Corrector Scheme	148
14.2.3 SHOCK: Propagating Shock Wave Computation	151
14.2.4 Inclined Cone Problem	158
14.2.5 Moretti λ -Scheme	161
14.2.6 Computation of Strong Shocks	164

14.2.7 FCT: Propagating Shock Wave by an FCT Algorithm	171
14.2.8 Implicit Schemes for the Euler Equations	174
14.2.9 Multigrid for Euler Equations	181
14.3 Transonic Inviscid Flow	185
14.3.1 General Considerations	186
14.3.2 Transonic Small Disturbance Equation	187
14.3.3 Full Potential Equation	189
14.3.4 Transonic Inviscid Flow: Generalised Coordinates	191
14.3.5 Solution of the Algebraic Equations	193
14.3.6 Non-isentropic Potential Formulation	197
14.3.7 Full Potential Equation, Further Comments	198
14.4 Closure	199
14.5 Problems	200
15. Boundary Layer Flow	204
15.1 Simple Boundary Layer Flow	205
15.1.1 Implicit Scheme	206
15.1.2 LAMBL: Laminar Boundary Layer Flow	207
15.1.3 Keller Box Scheme	214
15.2 Complex Boundary Layer Flow	216
15.2.1 Change of Variables	216
15.2.2 Levy–Lees Transformation	216
15.2.3 Davis Coupled Scheme	218
15.3 Dorodnitsyn Boundary Layer Formulation	221
15.3.1 Dorodnitsyn Finite Element Method	223
15.3.2 DOROD: Turbulent Boundary Layer Flow	227
15.3.3 Dorodnitsyn Spectral Method	237
15.4 Three-Dimensional Boundary Layer Flow	239
15.4.1 Subcharacteristic Behaviour	240
15.4.2 Generalised Coordinates	243
15.4.3 Implicit Split Marching Algorithm	244
15.5 Closure	246
15.6 Problems	247
16. Flows Governed by Reduced Navier–Stokes Equations	252
16.1 Introduction	253
16.1.1 Order-of-Magnitude Analysis	256
16.1.2 Fourier Analysis for Qualitative Solution Behaviour	260
16.1.3 Qualitative Solution Behaviour of the Reduced Navier–Stokes Equations	263
16.1.4 THRED: Thermal Entry Problem	267
16.2 Internal Flow	273
16.2.1 Internal Swirling Flow	277
16.2.2 Flow in a Straight Rectangular Duct	283
16.2.3 Flow in a Curved Rectangular Duct	289

16.3 External Flow	296
16.3.1 Supersonic Flow	297
16.3.2 Subsonic Flow	304
16.3.3 Incompressible Flow	312
16.3.4 Viscous, Inviscid Interactions	317
16.3.5 Quasi-Simultaneous Interaction Method	321
16.3.6 Semi-Inverse Interaction Method	323
16.3.7 Viscous, Inviscid Interaction Using the Euler Equations	326
16.4 Closure	327
16.5 Problems	329
17. Incompressible Viscous Flow	333
17.1 Primitive Variables: Unsteady Flow	334
17.1.1 Staggered Grid	335
17.1.2 MAC Formulation	337
17.1.3 Implementation of Boundary Conditions	340
17.1.4 Developments of the MAC Method	341
17.1.5 Higher-Order Upwinding Differencing	345
17.1.6 Spectral Methods	349
17.2 Primitive Variables: Steady Flow	356
17.2.1 Artificial Compressibility	356
17.2.2 Auxiliary Potential Function	360
17.2.3 SIMPLE Formulations	362
17.2.4 Finite Element Formulation	368
17.3 Vorticity, Stream Function Variables	373
17.3.1 Finite Difference Formulations	375
17.3.2 Boundary Condition Implementation	378
17.3.3 Group Finite Element Formulation	382
17.3.4 Pressure Solution	390
17.4 Vorticity Formulations for Three-Dimensional Flows	392
17.4.1 Vorticity, Vector Potential Formulation	392
17.4.2 Vorticity, Velocity Formulation	395
17.5 Closure	396
17.6 Problems	397
18. Compressible Viscous Flow	399
18.1 Physical Simplifications	400
18.1.1 Eddy Viscosity Turbulence Modelling	404
18.1.2 Constant Total Enthalpy Flow	406
18.1.3 Thin Layer Approximation	408
18.2 Explicit Schemes	410
18.2.1 Explicit MacCormack Scheme	410
18.2.2 Runge–Kutta Schemes	413
18.3 Implicit Schemes	415
18.3.1 Implicit MacCormack Scheme	415

18.3.2 Beam and Warming Scheme	421
18.3.3 Group Finite Element Method	423
18.3.4 Approximate LU Factorisation	427
18.4 Generalised Coordinates	430
18.4.1 Steger Thin Layer Formulation	431
18.4.2 Approximate Factorisation Finite Element Method	438
18.5 Numerical Dissipation	442
18.5.1 High Reynolds Number Flows	445
18.5.2 Shock Waves	446
18.6 Closure	451
18.7 Problems	452
References	457
