

Contents

1. Introduction	1
1.1. Energy Bands and Densities of States	1
1.1.1 Tight-Binding Approximation	1
1.1.2 Molecular Model	3
1.1.3 Beyond the Molecular Model – The Formation of Bands	4
1.1.4 Densities of States	7
1.2 Two-Dimensional Lattices	8
1.2.1 The Two-Dimensional Lattice of a Perfect Surface	8
1.2.2 Surface-Induced Features	10
1.3 Geometrical Structure of “Real” Surfaces	14
1.3.1 Examples of Relaxed and Reconstructed Surfaces of Semiconductors	14
1.3.2 Relaxations and Reconstructions of Metals	20
Exercises	23
 2. General Methods for Calculating the Electronic Structure of Surfaces	 25
2.1 The Two Basic Theoretical Methods	25
2.1.1 The Local Density Approximation and Its Improvements	25
2.1.2 Tight-Binding Empirical Methods	27
2.2 Direct Calculations of Surface Properties	32
2.2.1 The Periodic Slab Geometry	32
2.2.2 The Single Slab Geometry	33
2.2.3 The Method of Appelbaum and Hamann	34
2.3 The Green's Function Method	35
2.3.1 Definitions and Useful Relations	35
2.3.2 Green's Functions for Localized Perturbations	37
2.3.3 Tight-Binding: Recursion Method and Moments of Partial Densities of States	38
2.3.4 Surface Dispersion Relation	40
2.4 Simple Examples of Tight-Binding Surface Bands	45
2.4.1 The Semi-Infinite Linear Chain	45
2.4.2 The (100) Face of the Simple Cubic Lattice	49
2.4.3 Moment Analysis	51
	IX

2.5	Surface Properties in the Jellium Model	52
	Exercises	55
3.	Transition Metal Surfaces	56
3.1	Bulk Properties	56
3.2	Work Function, Dipole Layer and Core-Level Shifts	60
3.2.1	Determination of the Chemical Potential	61
3.2.2	The <i>d</i> -Electron Dipole Layer	64
3.2.3	Core-Level Shifts	67
3.3	Calculation of the Total Energy	69
3.3.1	Influence of the Lattice Geometry	69
3.3.2	The Surface Tension	70
3.3.3	Magnitude of the Atomic Relaxation Near Surfaces ..	72
3.4	The Magnetism of Transition Metal Surfaces	75
	Exercises	82
4.	Electronic States at Covalent Semiconductor Surfaces	83
4.1	Basic Difference Between σ - and π -Bonding	83
4.1.1	Covalent σ -Bonds in Group IV Elemental Crystals ..	84
4.1.2	Other Cases of σ -Bonds	85
4.1.3	π -Bonding and Its Strength Relative to σ -Bonding ..	87
4.2	The Unrelaxed, Unreconstructed (111) and (100) Surfaces ...	89
4.2.1	Description in Terms of Dangling Bonds	90
4.2.2	Effective Hamiltonian for Surface States	91
4.2.3	The Possibility of Surface Electronic Instabilities ...	94
4.3	Present Understanding of Relaxation and Reconstruction	98
4.3.1	General Principles Governing Relaxation and Reconstruction	98
4.3.2	Si(111) 2×1 : The π -Bonding Chain Model	102
4.3.3	Si(111) 7×7 : The Dimer-Adatom-Stacking-Fault Model	105
4.3.4	Si(100) 2×1 : The Dimer Model	107
	Exercises	108
5.	Surfaces of Compound Semiconductors	110
5.1	General Conditions for Self-Consistency: The Local Neutrality Condition	110
5.1.1	General Arguments	110
5.1.2	Tight-Binding Formulation	113
5.1.3	Zero-Charge Dangling Bond Levels and Work Function	115
5.1.4	Separation of Long-Range and Short-Range Effects ..	117
5.2	The (110) Surface	119
5.2.1	The Ideal Unrelaxed Surface	120
5.2.2	The Relaxed Surface	121
5.2.3	Core Level Shifts	123

5.3	Polar Surfaces	126
5.3.1	General Electrostatic Stability Condition	126
5.3.2	GaAs(111) Surfaces	130
5.3.3	GaAs(100) Surfaces	133
	Exercises	135
6.	Chemisorption on Semiconductor Surfaces	137
6.1	Chemisorption of Metal Atoms on Semiconductors:	
	The Formation of the Schottky Barrier	137
6.1.1	The Isolated Chemisorbed Molecule	139
6.1.2	The Very Low Coverage Limit	144
6.1.3	Electrostatic Interaction Between Adsorbed Species	147
6.1.4	Broadening Effects and the Onset of Metallization	150
6.1.5	Discussion	152
6.2	An Ideal Chemisorbed Layer: Arsenic on Si(111) or Ge(111)	152
	Appendix	155
	Exercises	156
7.	Interfaces	157
7.1	The Metal–Semiconductor Interface	157
7.1.1	Evolution of Our Understanding	158
7.1.2	The Pinning Energy and the Neutrality Level or the Average Dangling Bond Energy	160
7.1.3	Quantitative Comparison Between the Schottky Barrier Height and the Average Dangling Bond Energy	162
7.1.4	Discussion	164
7.2	The Heterojunction Between Two Semiconductors	165
7.2.1	Relation Between Band Offsets and Schottky Barrier Heights	166
7.2.2	Zero-Charge and Zero-Dipole Approximations	167
7.2.3	Full Calculations for Lattice-Matched Systems	170
7.2.4	Strained Heterojunctions – Quantum Wells	172
7.2.5	Strained Heterojunctions – Superlattices	175
7.3	Relations Between Transition Metal Impurity Levels, Band Offsets and Schottky Barrier Heights	181
7.4	The Semiconductor–Oxide Interface: Si–SiO ₂	187
7.4.1	Electronic Structure of Si, SiO ₂ and SiO _x	188
7.4.2	Very Thin SiO ₂ Films on Silicon	193
7.4.3	The P _b Center at the Si–SiO ₂ Interface	196
	Exercises	199
8.	Surface Phonons	200
8.1	General Vibrational Properties	200
8.1.1	The Dynamical Matrix	200
8.1.2	Empirical Force Constants	202

8.1.3	Total Energy Determination	204
8.1.4	Bulk Dispersion Curves in Covalent Semiconductors	205
8.1.5	Bulk Dispersion Curves in Compound Semiconductors	208
8.2	Surface Phonons	209
8.2.1	Moments of the Local Vibrational Density of States ..	209
8.2.2	Mean Square Displacement of Surface Atoms	210
8.2.3	Surface Entropy	212
8.2.4	Long-Wavelength Acoustic Modes: Rayleigh Waves ..	213
8.2.5	Recent Results for Si(111) and Si(100)	215
8.3	Phonon-Related Properties	216
8.3.1	Oscillatory Relaxation or Reconstruction Near Surfaces ..	216
8.3.2	Effective Force Constants	220
8.3.3	The Electron-Lattice Interaction	221
	Exercises	224
	Solutions to Exercises	225
	References	241
	Subject Index	251
