Contents

1. Dislocations and Their Fundamental Properties 1
1.1 Geometry of a Dislocation 1
1.2 Stress Field and Energy of Dislocations 4
1.3 Force on a Dislocation 8
1.4 String Model of a Dislocation 9
1.5 Obstacles to Dislocation Motion 12

2. Motion of Dislocations in Soft Metals 13
2.1 General Characteristics 13
2.2 Intrinsic and Extrinsic Barriers for the Motion of Dislocations 16
2.3 Dislocation Velocity 17
2.3.1 General 17
2.3.2 Characteristics of Dislocation Motion in fcc and hcp Metals 21
2.3.3 The Steady-State Velocity and Number of Moving Dislocations 24
2.4 Frictional Forces due to Conduction Electrons and Phonons . 27
2.5 Theoretical Studies of the Frictional Forces 29
2.5.1 Frictional Force due to Conduction Electrons 29
2.5.2 Frictional Force due to Phonons 30

3. Dislocation Motion in the Field of a Random Distribution of Point Obstacles: Solution Hardening 32
3.1 Solution Hardening 32
3.1.1 Experimental 32
3.1.2 Theoretical 35
3.2 Comparison of Theories of Solution Hardening with Computer Simulation 42
3.3 Effect of a Random Distribution of Point Obstacles on τ_c ... 43
3.4 Appendix: Elastic Interaction Between a Dislocation and a Solute Atom 45

4. Dislocation Dynamics and Strength of Crystalline Materials ... 47
4.1 The Loss of Strength of Metals and Alloys in the Superconducting State 47
4.1.1 Temperature Dependence 49

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.1.2 Impurity Dependence 50
4.1.3 Strain-Rate Dependence 50
4.1.4 Anomalous Strain-Rate Dependence 51
4.1.5 Strain Dependence 52
4.2 Loss of Strength in the Normal State of Solid Solutions at Low Temperatures 52
4.3 Theory of Inertial Effects 54
4.3.1 Inertial Theory 54
4.3.2 Excitation of Quasiparticles by Moving Dislocations and Anomalous Strain-Rate Sensitivity of B_s 56
4.4 Quantitative Treatment of the Strength of Metals and Alloys of fcc Structure 57
4.4.1 Unzipping Effect 57
4.4.2 Effects of Inertia on the Activation Process 59
4.4.3 Quantitative Analysis of $\Delta\tau_{ns}$ 61
4.4.4 Effect of Inertia on the Activation Volume 61

5. Dislocation Motion Controlled by the Peierls Mechanism 63
5.1 Introduction 63
5.2 Dislocation Glide by the Peierls Mechanism 65
5.2.1 Smooth Kink Model 66
5.2.2 Dislocation Velocity in the Smooth Kink Model 70
5.2.3 Abrupt Kink Model 72

6. Dislocations in bcc Metals and Their Motion 77
6.1 Dislocations in bcc Metals and Their Peierls Potential 77
6.2 Computer Experiments 80
6.2.1 Crystal Geometry and Peierls Stress 80
6.2.2 Core Structure of a Screw Dislocation 81
6.2.3 Behavior Under Stress 84
6.3 Plasticity of bcc Metals 88
6.3.1 Yielding of bcc Metals 88
6.3.2 Plasticity of bcc Metal Single Crystals 89

7. Dislocation Motion in Semiconducting Crystals 99
7.1 Introduction 99
7.2 Structure of Dislocations in Semiconducting Crystals 100
7.2.1 Atomic Structure 100
7.2.2 Electronic Structure of the Dislocation Core 102
7.3 Mobility of Dislocations in Semiconducting Crystals 106
7.3.1 Experimental Facts 106
7.3.2 The Mechanism Controlling the Mobility 109
7.4 Effect of Electronic Excitation on the Dislocation Mobility 111
7.5 Photoplastic Effect in II-VI Compounds 114
7.5.1 Plasticity and Dislocation Motion in II-VI Compounds 114
7.5.2 Photoplastic Effect 115

8. High-Temperature Deformation of Metals and Alloys 120
8.1 Deformation Mechanism Map 120
8.1.1 Dislocation Glide 121
8.1.2 Diffusional Creep 121
8.1.3 Power Law Creep 124
8.1.4 Harper-Dorn Creep 125
8.1.5 Effect of Internal Structure 126
8.1.6 Others 129
8.2 Deformation due to Dislocation Motion 131
8.2.1 Thermal and Athermal Processes 131
8.2.2 Viscous Motion and High-Speed Motion of Dislocations 134
8.3 Identification of Deformation Mechanism at High Temperatures 135
8.3.1 Temperature Change Technique 136
8.3.2 Strain Rate Change Technique 136
8.3.3 Stress Dip Technique 138
8.3.4 Stress Change Technique 144
8.3.5 Fundamental Problems in Internal Stress Measurement 145
8.3.6 Techniques to Determine Whether the Effective Stress Is Appreciable or Negligible 150

9. High-Temperature Deformation Mechanism in Metals and Alloys 157
9.1 High-Temperature Deformation Mechanism in Pure Metals .. 157
9.1.1 Jog-Drag Theory 157
9.1.2 Theory of Recovery Control 164
9.1.3 Effect of Inhomogeneity in the Dislocation Structure 169
9.1.4 Experimental Values of h and r 172
9.2 High-Temperature Deformation Mechanism in Alloys 177
9.2.1 High-Temperature Deformation Behavior of Solution-Hardened Alloys 178
9.2.2 Drift Flow of Solute Atoms Relative to a Moving Dislocation 181
9.2.3 Resistance to Dislocation Motion due to Solute Atmosphere 184
9.2.4 Interpretation of High-Temperature Deformation Behavior of Alloys 188

10. High-Temperature Deformation Mechanism in Composite Materials 198
10.1 Types of Composite Materials 198
10.2 High-Temperature Deformation Mechanism in Dispersion-Strengthened Materials 199
10.2.1 Climb Model 199
10.2.2 Attractive Interaction 207

10.3 High-Temperature Deformation Mechanism in Fiber- and Lamella-Reinforced Materials 209
