

Contents

Part I Introduction	1
1 Terrestrial Atmospheric Structure and Properties of Electromagnetic Waves	3
1.1 The Radio Spectrum	3
1.2 Structure and Composition of the Terrestrial Ionosphere	3
1.3 Electrical Noise and Radio Frequency Interference	15
1.3.1 Thermal Noise in a Resistor	16
1.3.2 The Noise Factor, Figure, and Temperature of a Radio Receiver	17
1.4 Properties of Electromagnetic Waves and Their Interaction with Matter	20
1.4.1 Maxwell's Equations and the Wave Equation	20
1.4.2 Some Characteristics of Propagating Plane Waves	23
1.4.3 Properties of the Propagation Constant and Vector	25
1.4.4 Polarization of an Electromagnetic Wave in Free Space	31
1.4.5 The Radar Equation	36
2 Radio Propagation in a Plasma	40
2.1 Radio Wave Propagation in an Unmagnetized Plasma	40
2.1.1 Vertical and Oblique Propagation	41
2.1.2 The Virtual Height Concept	44
2.1.3 Vertical and Oblique Propagation	44
2.2 Radio Propagation in a Magnetized Plasma	46
2.2.1 Dispersion and Polarization	47
2.2.2 Absorption of Radio Waves in the Ionosphere	50
2.3 Ionospheric Scattering of Radio Waves	53
2.3.1 Coherent Scatter from Ionospheric Irregularities	54
2.3.2 Incoherent Scatter from the Ionosphere	58
Part II Earth-Based Radio Techniques	65
3 Vertical Sounders – the Ionosonde	67
3.1 History of Development and Basic Principles of Operation	67
3.2 Standard Ionosondes	68

3.3	Advanced Ionospheric Sounders	77
3.4	Capabilities of Ionosondes	90
3.5	Limitations	92
4	Oblique Backscatter Sounders	94
4.1	HF Pulsed Groundscatter Systems	95
4.1.1	The Development of Backscatter Sounding as a Remote Sensor of the Ionosphere	96
4.1.2	Basic Ionospheric Groundscatter Theory	98
4.1.3	Various Techniques Employed in Groundscatter Sounding	107
4.2	Characteristics of a Typical Scanned Groundscatter System with Variable Frequency	107
4.2.1	The ITS/ESSA OBS System (1960's Technology)	107
4.3	Direct Ionospheric Backscatter	107
4.3.1	History of Development of the Technique	109
4.3.2	Direct Backscatter from the E-Region	110
4.3.3	Backscatter from the F-Region	112
4.4	Capabilities and Limitations of OBS Systems	116
4.4.1	HF Groundscatter OBS Capabilities	116
4.4.2	Direct HF Backscatter OBS Systems	117
4.4.3	Auroral Radar Systems	118
5	Incoherent Scatter Radar (ISR) Systems	122
5.1	Introduction	122
5.2	Basic ISR System Considerations	122
5.3	Currently Operational ISR Systems	123
5.3.1	Descriptions of Individual Operational ISR's	124
5.3.2	How to Obtain Data and Information from Currently Operational ISR's	138
5.4	Capabilities and Limitations	139
6	Ionospheric Modification by High Power Radio Waves	142
6.1	Ionospheric Cross Modulation Techniques – Some Representative Results	144
6.1.1	Modulated Disturbing Wave, Unmodulated Wanted Wave at Oblique Incidence, and Gyro Interaction	144
6.1.2	Self-Interaction and Gyro Self-Interaction	145
6.1.3	Pulse Modulated Disturbing and Wanted Waves – Vertical Propagation	145
6.1.4	Pulse Modulated Disturbing Wave – Cosmic Noise Wanted Wave, Using Vertical Propagation	146
6.1.5	Outline of Cross Modulation Theory	146
6.2	Ionospheric Heating Using High Power HF/CW Transmitters .	152

6.2.1	Basic Theory of Ionospheric Heating	152
6.2.2	Descriptions of Facilities and Some Results from Ionospheric Heating Investigations at Mid-Latitudes	155
6.2.3	The Low-Latitude HF Heating Facility at the National Aero- nomy and Ionosphere Center (NAIC), Arecibo, Puerto Rico ..	158
6.2.4	HF Heating Facilities at High Latitudes	159
6.3	Capabilities and Limitations of Radio-Wave Interaction and HF Heating Experiments	162
6.3.1	Capabilities	162
6.3.2	Limitations	163
7	Methods of Measuring Ionospheric Absorption and Other D-Region Parameters	165
7.1	A1 – The Pulse Reflection Method	166
7.1.1	Vertical Incidence	166
7.1.2	A1 Technique – Oblique Incidence	168
7.2	A2 – The Cosmic Noise Technique	169
7.3	Oblique Field Strength Measurements (the A3 Method)	177
7.3.1	The A3a Method – Oblique Incidence Field Strength Observation on Frequencies Above 2 MHz	179
7.3.2	Method A3b – Oblique Incidence Field Strength Observation on Frequencies in and Below the MF Broadcasting Band	179
7.4	Partial Reflection Experiments (PRE)	180
7.4.1	Theory	180
7.4.2	Experimental Technique	181
7.5	Other Techniques	182
7.6	Capabilities and Limitations	183
	Part III Satellite, Rocket, and Other Techniques	185
8	Earth Satellite Radio Studies of the Ionosphere	187
8.1	Satellite Radio Experiments	187
8.1.1	A Short History of Radio Beacon Experiments (RBE)	188
8.1.2	Methods of Determining Electron Content	189
8.1.3	Global Variation of TEC	193
8.1.4	RBE Studies of Ionospheric Scintillation	196
8.2	Satellite Topside Sounders	200
8.2.1	Sweep Frequency Topside Sounders	201
8.3	Capabilities and Limitations of Satellite Radio Techniques ...	203
9	Other Radio Techniques	205
9.1	Ionospheric in Situ Measurements	205
9.2	HF Spaced-Receiver and Doppler Systems	207
9.3	Whistlers and Controlled Stimulation of VLF Emissions	213

9.3.1	Whistlers and Other Natural VLF Radiation	213
9.3.2	Controlled Stimulation of VLF Emissions	218
9.4	VLF and HF High Resolution Sounders	219
9.5	Ionospheric Imaging by Radio	225
9.6	Backscatter from Meteoric Ionization	227
10	Epilog	229
10.1	"Where We Have Been and Where We Are Now"	229
10.2	Specific Techniques and Their Applications	230
10.3	Complementarity	233
10.4	Concluding Remarks	235
10.4.1	The Present Status of Radio Instrumentation	235
10.4.2	Possible Future Trends	235
10.4.3	Excelsior!	235
A.1	List of Principal Symbols, Constants, and Conversion Factors	236
A.1.1	Principal Symbols	236
A.1.2	Selected Physical Constants	238
A.1.3	Some Selected Conversion Factors	238
A.2	Acronyms	241
A.3	A Radio Frequency Spectrum Chart Showing the ITU Nomenclature and Principal Uses	246
A.4	Annotated Bibliography	247
A.5	Selected Global Maps and Other Information on Electrical Noise	254
A.6	Some Representative Values of Ground Electrical Characteristics	257
A.7	Fresnel Zone Antenna Siting Fundamentals	258
A.7.1	Introduction	258
A.7.2	HF Antenna Siting Example	260
A.7.3	The Fresnel Zone in Three Dimensions	265
	References	267
	Subject Index	291
