

Contents

1. What are Microclusters?	1
1.1 Constituent Small Particles of Material	1
1.2 Division of Materials	2
1.2.1 Fine Particles	2
1.2.2 Microclusters	6
1.2.3 Molecules	9
2. Dynamics of Atomic Structure	11
2.1 Solid-like, Liquid-like, or Fluctuating?	11
2.1.1 Naive Questions	11
2.1.2 Atomic Structure of Adsorbed Microclusters	12
2.2 Coexistence of Solid-like and Liquid-like Phases	12
2.3 Fluctuating States and Permutation Isomers	17
2.3.1 The Case of $N = 6$	18
2.3.2 The Case of $N = 7$	24
2.3.3 Fluctuation in Large Clusters	26
2.4 Monte Carlo Simulations	27
2.4.1 Lennard-Jones Clusters Constrained to Spherical Cavities	28
2.4.2 Transition-Metal Clusters of $N = 7-17$	30
2.4.3 Effect of Magnetic Interactions	32
3. Shell Structure of Metal Clusters	37
3.1 Magic Numbers	37
3.2 The Jellium Model	39
3.2.1 Electronic Structure of Na_N Clusters	40
3.2.2 Spin Polarization and Multiplet Formation	43
3.2.3 Nonspherical Perturbation	44
3.3 Theory of Shell Correction	45
3.3.1 Essence of the Theory	47
3.3.2 Shell Correction for the Harmonic-Oscillator Model	49
3.4 Deformation	51
3.4.1 Application of the Shell Correction Theory	51
3.4.2 Fine Structure of Mass Spectra	55
3.5 Fragmentation	57
3.5.1 Symmetric Fission of a Charged Liquid-Droplet	58
3.5.2 Shell Correction for a Necked Spheroidal Cluster	59

4. Other Properties of Metal Clusters	64
4.1 Nonempirical Calculation of Alkali-Metal Clusters	64
4.1.1 Generalization of Hellmann-Feynman Forces	65
4.1.2 Geometries Calculated	65
4.1.3 Comparison with Experiments	68
4.1.4 Nature of Binding	69
4.2 Electronic Structure of Noble-Metal Clusters	70
4.2.1 Energy Levels of Copper Clusters	70
4.2.2 Photoelectron Spectra of a Copper Cluster	73
4.3 Electronic Structure of Transition-Metal Clusters	75
4.3.1 Energy Levels of Nickel Clusters	75
4.3.2 Stern-Gerlach's Experiment on Iron Clusters	79
4.4 Divalent-Metal Clusters	80
4.5 Trivalent-Metal Clusters, Al_N	82
4.5.1 Observed Properties	82
4.5.2 Nonempirical Calculation of Al_2-Al_6	85
5. Semiconductor Clusters	87
5.1 Carbon Clusters	87
5.1.1 Mass Spectra	87
5.1.2 Nonempirical Calculation	88
5.2 Stabilities of Silicon and Germanium Clusters	90
5.2.1 Photofragmentation of Mass-Resolved $Si_2^+-Si_{12}^+$	90
5.2.2 Photofragmentation of Larger Silicon and Germanium Clusters	92
5.2.3 Highly Ionized Germanium Clusters	94
5.3 Nonempirical Calculations for Si_6 and Si_{10}	95
5.3.1 Equilibrium Geometries	95
5.3.2 Energy Levels	97
5.3.3 Density Distribution of Electrons	98
5.4 Force and Virial Analysis of Larger Silicon Clusters	100
5.4.1 Six-Membered-Ring Clusters	100
5.4.2 Triangle Contraction	100
6. Rare-Gas Clusters	104
6.1 The Magic Numbers for Packing	104
6.1.1 Xenon Clusters	104
6.1.2 Argon Clusters	104
6.2 Helium Clusters	111
6.2.1 Magic Numbers	111
6.2.2 Nonempirical Calculation	114
7. Molecular Clusters	118
7.1 Photoionization of Ammonia Clusters	118
7.2 Ion-Centered Cage Structure	120
7.2.1 Magic Numbers for Water Clusters	120
7.2.2 Monte-Carlo Calculations	122

7.3	Negatively Charged Water Clusters	123
7.3.1	Solvated Electrons	123
7.3.2	Trapping of Electrons	123
7.3.3	Theoretical Treatments	125
7.4	Electron Attachment to van der Waals Clusters	127
7.4.1	Electron Transfer from High-Rydberg Rare Gas Atoms	127
7.4.2	Strongly Coupled Electron-Phonon Model	128
8.	Miscellaneous Topics	133
8.1	Synthetic Chemistry in a Cluster Beam	133
8.2	Latent-Image Generation	134
8.3	Electron Correlation and Chemical Bonds	137
8.3.1	Dimers Versus Close-Packed Aggregates	139
8.3.2	Trimers of Monovalent Elements	141
8.3.3	Pseudorotation of Na_3	142
8.4	Van der Waals and Metallic Mercury Clusters	143
8.5	Prospects of Microcluster Research	147
