

# Contents

<b>1. Introduction</b>	
By D. Mathur (With 5 Figures) . . . . .	1
1.1 The Need to Study Ion Impact Phenomena . . . . .	1
1.2 Some Contemporary Ion Production Techniques . . . . .	4
1.2.1 Electron Impact (EI) Sources . . . . .	4
1.2.2 The Electron Bombardment Ion Source (EBIS) . . . . .	6
1.2.3 The Electron Cyclotron Resonance Ion Source (ECRIS) . . . . .	7
1.2.4 The 'Ion Hammer' Technique . . . . .	8
References . . . . .	11
<b>2. Ion Formation Processes:</b>	
<b>Ionization in Ion-Electron Collisions</b>	
By A. Müller (With 60 Figures) . . . . .	13
2.1 Theoretical Methods . . . . .	15
2.1.1 The Classical Approach of J. J. Thomson . . . . .	15
2.1.2 Quantum Mechanical Approaches . . . . .	17
2.1.3 Predictor Formulae . . . . .	21
2.1.4 Threshold Behaviour . . . . .	22
2.2 Ionization Mechanisms . . . . .	23
2.2.1 Single Ionization . . . . .	24
2.2.2 Multiple Ionization . . . . .	29
2.2.3 Summation of Cross Section Contributions . . . . .	31
2.3 Experimental Approaches . . . . .	33
2.3.1 Plasma Rate Measurements . . . . .	34
2.3.2 Trapped-Ion Methods . . . . .	35
2.3.3 Ion Channeling . . . . .	37
2.3.4 Crossed-Beams Method . . . . .	39
2.4 Single Ionization Cross Section Data . . . . .	44
2.4.1 Hydrogen-like Ions . . . . .	44
2.4.2 Helium-like Ions . . . . .	48
2.4.3 Lithium-like Ions . . . . .	53
2.4.4 Sodium-like Ions . . . . .	59
2.4.5 Heavy Alkali-like Ions . . . . .	63
2.4.6 Magnesium-like Ions . . . . .	66
2.4.7 Isonuclear Sequences . . . . .	68
2.4.8 Ionization of Heavy Ions . . . . .	69
	XI

2.5 Multiple Ionization Cross Section Data . . . . .	72
2.5.1 Helium-like Ions . . . . .	72
2.5.2 The Argon Isonuclear Sequence . . . . .	73
2.5.3 The Xenon Isonuclear Sequence . . . . .	76
2.6 A Unified Picture of Ionization . . . . .	78
2.6.1 Single and Double Ionization of Sb and Bi Ions . . . . .	78
2.6.2 Single and Multiple Ionization of Heavy Metal Ions . . . . .	80
2.7 Conclusions . . . . .	86
References . . . . .	86

### 3. Ion-Neutral Reactions: Collision Spectrometry of Multiply Charged Ions at Low Energies

By E. Y. Kamber and C. L. Cocke (With 21 Figures) . . . . .	91
3.1 Dynamics of Collisions . . . . .	92
3.2 Theoretical Aspects . . . . .	94
3.2.1 Landau-Zener Model . . . . .	94
3.2.2 The Classical Over-Barrier Transition Model . . . . .	97
3.2.3 Reaction Window . . . . .	98
3.3 Experimental Techniques . . . . .	98
3.4 Discussion of Translational Energy Spectrometry . . . . .	99
3.4.1 State-Selective Single Electron Capture Processes by Ground and Metastable Doubly Charged Ions . . . . .	99
3.4.2 State-Selective Single Electron Capture by Multiply Charged Ions . . . . .	105
3.4.3 Multiple Electron Capture by Multiply Charged Ions . . . . .	111
3.5 Discussion of State-Selective Differential Electron Capture Cross Sections . . . . .	116
References . . . . .	120

### 4. Energy Spectrometry of Fine-Structure Transitions in Ion-Atom Collisions

By N. Kobayashi (With 15 Figures) . . . . .	123
4.1 High-Resolution Ion Translational Energy Spectrometry . . . . .	125
4.1.1 Apparatus . . . . .	125
4.1.2 Broadening of Line Shape . . . . .	126
4.2 Fine-Structure Transitions in $\text{Ne}^+$ , $\text{Ar}^+$ and $\text{Kr}^+$ . . . . .	126
4.2.1 Translational Energy Spectra . . . . .	126
4.2.2 Fractional Populations of $^2\text{P}_{3/2}$ and $^2\text{P}_{1/2}$ States . . . . .	127
4.2.3 Cross Sections for Fine-Structure Transitions in $\text{Ne}^+$ , $\text{Ar}^+$ and $\text{Kr}^+$ . . . . .	129
4.3 Excitation and De-excitation Processes in Doubly Charged Rare Gas Ions . . . . .	133
4.3.1 Translational Energy Spectra . . . . .	133
4.3.2 Fractional Populations of $^3\text{P}_J$ , $^1\text{D}_2$ and $^1\text{S}_0$ . . . . .	134

4.3.3 Cross Sections for Excitation and De-excitation Among $^3P_2$ , $^3P_1$ , $^3P_0$ , $^1D_2$ and $^1S_0$ States . . . . .	135
4.4 The Role of Fine-Structure States in Electron Capture Reactions . . . . .	138
4.4.1 Relative Cross Sections for Reactions in $Kr^{2+}(^1D_2)+Ne$ . . . . .	138
4.4.2 Diabatic Potential Energy Curves . . . . .	140
4.4.3 Landau-Zener Model for Single Crossing . . . . .	141
4.4.4 Multichannel Landau-Zener Model . . . . .	143
4.4.5 Landau-Zener Calculation with Weighted Transition Probability . . . . .	144
References . . . . .	145
<b>5. Probing Interaction Potentials:</b>	
<b>Small Angle Differential Scattering of <math>H^+</math> and <math>H</math> with <math>He</math></b>	
By L. K. Johnson and R. F. Stebbings (With 9 Figures) . . . . .	147
5.1 Experimental Method . . . . .	148
5.2 Theoretical Considerations . . . . .	151
5.2.1 Molecular Orbital Expansion Method . . . . .	152
5.2.2 Potential Scattering . . . . .	154
5.3 Results and Discussion . . . . .	156
5.3.1 $H$ - $He$ Direct Scattering . . . . .	156
5.3.2 $H^+$ - $He$ Charge Transfer and Direct Scattering . . . . .	159
5.4 Summary . . . . .	162
References . . . . .	163
<b>6. High-Resolution Translational Energy Spectrometry of Molecular Ions</b>	
By M. Hamdan and A. G. Brenton (With 23 Figures) . . . . .	165
6.1 Some Typical Experimental Arrangements . . . . .	167
6.1.1 Double-Focussing Arrangements . . . . .	169
6.2 Results and Discussion . . . . .	173
6.2.1 TES of keV Atomic Ions . . . . .	173
6.2.2 TES and the Spin-Conservation Rule . . . . .	175
6.2.3 Doubly Charged Diatomic Molecules . . . . .	177
References . . . . .	196
<b>7. Molecular Ionization Energies by Double Charge Transfer Spectrometry</b>	
By F. M. Harris (With 5 Figures) . . . . .	199
7.1 Apparatus and Experimental Techniques . . . . .	201
7.1.1 Double Charge Transfer Spectrometry Prior to 1977 . . . . .	201
7.1.2 Double Charge Transfer Spectrometer Used at Paris . . . . .	201
7.1.3 Double Charge Transfer Spectrometry at Swansea . . . . .	201
7.1.4 Double Charge Transfer Spectrometer Used at Bombay . . . . .	203
7.2 Studies of Electronic States of Doubly Charged Ions . . . . .	204
7.2.1 Spin Conservation . . . . .	204

7.2.2 Studies of Small Molecules . . . . .	208
7.3 Studies of Large Molecules . . . . .	209
7.3.1 CH <sub>3</sub> OH . . . . .	209
7.3.2 SF <sub>6</sub> . . . . .	211
7.3.3 CH <sub>4</sub> . . . . .	211
7.3.4 Fluoromethanes, Chloromethanes and Bromomethanes . . . . .	212
7.3.5 Perhalomethanes . . . . .	213
7.3.6 Fluoroethanes . . . . .	213
7.4 Reaction Window for Double Electron Capture . . . . .	214
7.4.1 Endoergicity of DEC Reactions . . . . .	214
7.4.2 Theoretical Prediction of a Reaction Window . . . . .	215
7.4.3 Relative Cross Sections for DEC Reactions Measured as a Function of Endoergicity . . . . .	216
7.4.4 Evidence for a Reaction Window in Collisions Involving the Molecular Target CH <sub>3</sub> Br . . . . .	216
7.5 Single Ionization Energies of Radical Species . . . . .	219
7.5.1 CH <sub>3</sub> O and CH <sub>3</sub> S Radicals . . . . .	219
7.5.2 Mercaptyl Radicals C <sub>2</sub> H <sub>5</sub> S and n-C <sub>3</sub> H <sub>7</sub> S . . . . .	220
7.5.3 CF <sub>2</sub> Cl and CFC <sub>2</sub> Radicals . . . . .	220
7.5.4 The SF <sub>5</sub> Radical . . . . .	221
References . . . . .	222
<b>8. Studies of Multiply Charged Molecules</b> <b>by Ion Collision Techniques and Ab Initio Theoretical Methods</b>	
By V.R. Marathe and D. Mathur (With 10 Figures) . . . . .	225
8.1 Stability of Multiply Charged Molecular Ions . . . . .	226
8.1.1 Potential Energy Functions . . . . .	226
8.1.2 A Qualitative Molecular Orbital Picture of Stability . . . . .	228
8.2 Contemporary Ion-Impact Methods of Studying Multiply Charged Molecules . . . . .	229
8.2.1 Translational Energy Spectrometry . . . . .	229
8.2.2 Transmission of Singly and Doubly Charged Ions Through Electrostatic and Magnetic Fields . . . . .	229
8.2.3 Charge-Stripping Studies . . . . .	231
8.2.4 Double Electron Capture . . . . .	232
8.2.5 Dissociation Studies . . . . .	233
8.2.6 Excitation (De-excitation) and Electron Capture Reactions . . . . .	235
8.2.7 Studies Using Forward-Geometry Mass Spectrometers . . . . .	236
8.2.8 Studies Using High-Energy Accelerators . . . . .	237
8.2.9 Energy Calibration . . . . .	240
8.3 Other Experimental Techniques . . . . .	241
8.3.1 Auger Spectroscopy . . . . .	241
8.3.2 Photoionization Methods . . . . .	242
8.3.3 Optical Spectroscopy . . . . .	243
8.3.4 Electron Impact Experiments . . . . .	243

8.4	Theoretical Description of Molecular Ions . . . . .	245
8.4.1	The Schrödinger Equation and the Born-Oppenheimer Approximation . . . . .	245
8.4.2	Hartree-Fock Theory . . . . .	246
8.4.3	Electron Correlation . . . . .	252
8.4.4	Multiconfiguration SCF Method (MCSCF) . . . . .	258
8.4.5	Spin-Coupled Valence Bond Theory . . . . .	260
8.5	A Glimpse into the Real World of Multiply Charged Molecules: Ambiguities and Controversies . . . . .	262
8.5.1	Diatomic Ions . . . . .	262
8.5.2	Triatomic Ions . . . . .	266
8.5.3	Polyatomic Ions . . . . .	268
