1	Introduction (R. STOCK)	1-1
1.1	Overview	1-1
1.2	History	1-2
1.3	The QCD Phase Diagram	1-4
1.4	Physics Observables	1-6
2	Theory of Strongly Interacting Matter	2-1
2.1	The States of Strongly Interacting Matter (H. SATZ)	2-1
2.1.1	From Hadrons to Quarks and Gluons	2-2
2.1.2	Matter at Finite Temperature	2-4
2.1.3	The Order of the Transition	2-9
2.1.4	The Origin of the Transition	2-11
2.1.5	Probing the States of Matter in QCD	2-14
2.1.5.1	Hadron Radiation	2-15
2.1.5.2	Electromagnetic Radiation	2-16
2.1.5.3	Quarkonium Dissociation	2-17
2.1.5.4	Jet Quenching	2-20
2.1.5.5	Initial State Considerations	2-22
2.1.6	Summary	2-23
2.2	Lattice QCD and the Phase Diagram of Quantum Chromodynamics (Z. FODOR, S.D. KATZ)	2-27
2.2.1	Introduction	2-27
2.2.1.1	The phase diagram of QCD	2-28
2.2.2	QCD thermodynamics on the lattice	2-30
2.2.2.1	The action in lattice QCD	2-31
2.2.2.2	Correlators	2-35
2.2.2.3	Continuum limit	2-36
2.2.2.4	Algorithms	2-36
2.2.3	Results at zero chemical potential	2-40
2.2.3.1	Choice of the action	2-40
2.2.3.2	$T=0$ simulations	2-41
2.2.3.2.1	Determination of the LCP	2-41
2.2.3.3	The order of the QCD transition	2-43
2.2.3.4	The transition temperature	2-46
2.2.3.5	Equation of state	2-52
2.2.3.6	Note added in proof	2-56
2.2.4	Finite chemical potential	2-58
2.2.4.1	Chemical potential on the lattice	2-59
2.2.4.2	The sign problem	2-59
2.2.4.3	Multi-parameter reweighting	2-60
2.2.4.3.1	Multi-parameter reweighting with Taylor-expansion	2-62
2.2.4.3.2	Simulations at imaginary μ	2-62

2.2.4.3.3	Differences and similarities of the three techniques	2-63
2.2.4.3.4	Determining the phase diagram by Lee-Yang zeroes	2-64
2.2.4.4	Results for the phase diagram	2-65
2.2.4.4.1	Phase line	2-65
2.2.4.4.2	The critical point	2-66
2.2.4.5	Equation of state at $\mu > 0$	2-68
2.2.5	Conclusions, outlook	2-69
3	Hadronic Matter	3-1
3.1	The Quest for the Nuclear Equation of State (J. AICHELIN, J. SCHAFFNER-BIELICH)	3-1
3.1.1	Introduction	3-1
3.1.2	The EoS and Heavy-Ion Collisions	3-4
3.1.3	The EoS and Astrophysics	3-10
3.1.3.1	The nuclear EoS, supernovae and neutron star mergers	3-10
3.1.3.2	The nuclear EoS and compact stars	3-11
3.2	Hadron Production in Heavy Ion Collisions (H. OESCHLER, H.G. RITTER, NU XU)	3-24
3.2.1	Introduction	3-24
3.2.2	Hadron Production below 2 A GeV	3-25
3.2.2.1	Multiplicities	3-26
3.2.2.2	Spectra	3-31
3.2.2.3	Conclusions	3-34
3.2.3	Hadron Production from AGS to RHIC	3-35
3.2.3.1	Systematics of Spectra and Slopes at AGS and SPS	3-37
3.2.3.2	Spectra and Radial Flow at RHIC	3-39
3.2.3.3	Partonic Collectivity at RHIC	3-41
3.2.3.4	Outlook	3-42
3.2.4	Summary	3-43
4	The Hadron-Parton Phase Transition	4-1
4.1	The Chiral Restoration Transition of QCD and Low Mass Dileptons (R. RAPP, J. WAMBACH, H. VAN HEES)	4-1
4.1.1	Introduction	4-1
4.1.1.1	QCD Vacuum and Chiral Restoration	4-1
4.1.1.2	Ultrarelativistic Heavy-Ion Collisions	4-2
4.1.1.3	Dilepton Spectroscopy	4-4
4.1.1.4	Outline	4-6
4.1.2	Chiral Symmetry, Condensates and Chiral Restoration	4-7
4.1.2.1	Condensates and Hadron Spectrum in Vacuum	4-7
4.1.2.2	Phase Diagram and Chiral Restoration	4-8
4.1.3	Vector Mesons in Medium	4-11
4.1.3.1	Dileptons and Electromagnetic Correlation Function	4-11
4.1.3.2	Medium Effects I: Model Independent	4-14
4.1.3.2.1	Chiral Reduction and Mixing	4-14
4.1.3.2.2	Lattice QCD and Susceptibilities	4-14
4.1.3.3	Sum Rules and Order Parameters	4-16
4.1.3.3.1	Chiral Sum Rules	4-16
4.1.3.3.2	QCD Sum Rules	4-17
4.1.3.4	Medium Effects II: Chiral Effective Models	4-19
4.1.3.4.1	Hidden Local Symmetry and Vector Manifestation	4-19

4.1.3.4.2	Massive Yang-Mills and Hadronic Many-Body Theory	4-19
4.1.3.5	Thermal Dilepton and Photon Rates	4-23
4.1.4	Interpretation of Dilepton Spectra	4-25
4.1.4.1	Medium Effects in Nuclei	4-25
4.1.4.2	Heavy-Ion Collisions	4-26
4.1.4.2.1	Thermal Evolution and Dilepton Sources	4-26
4.1.4.2.2	CERN-SPS I: NA60	4-29
4.1.4.2.3	CERN-SPS II: CERES/NA45 and WA98	4-33
4.1.4.2.4	Future Dilepton Measurements	4-34
4.1.4.3	Critical Appraisal	4-36
4.1.5	Conclusions	4-37
4.2	Electromagnetic Probes (I. TSERRUYA)	4-43
4.2.1	Introduction	4-43
4.2.2	Experimental challenge	4-46
4.2.3	p+p and p+A collisions: the reference measurements	4-47
4.2.3.1	Reference measurements at SPS	4-47
4.2.3.2	Reference measurements at RHIC	4-49
4.2.4	Low-mass continuum in nuclear collisions	4-49
4.2.4.1	Low-mass dileptons at the SPS	4-50
4.2.4.1.1	CERES results	4-50
4.2.4.1.2	NA60 results	4-53
4.2.4.2	Low-mass dileptons at RHIC	4-55
4.2.4.3	Low-mass dileptons at low energies	4-58
4.2.5	Light vector mesons in nuclear collisions	4-59
4.2.6	Intermediate mass region	4-62
4.2.6.1	IMR dimuons at SPS	4-62
4.2.6.2	IMR at RHIC	4-64
4.2.7	Light vector meson spectroscopy in elementary reactions	4-65
4.2.8	Thermal photons	4-68
4.2.9	Summary and outlook	4-69
4.3	The QCD Confinement Transition: Hadron Formation (F. BECATTINI, R.J. FRIES)	4-75
4.3.1	Introduction	4-75
4.3.2	The Statistical Hadronization Model	4-75
4.3.2.1	Localized States	4-77
4.3.2.2	The Formalism: Basics	4-78
4.3.2.3	Rates of Multiparticle Channels	4-80
4.3.2.4	Interactions	4-82
4.3.2.5	High Energy Collisions	4-83
4.3.2.6	Heavy Ion Collisions	4-86
4.3.2.7	Strangeness Production	4-88
4.3.2.8	Thermalization: How Is It Achieved?	4-90
4.3.3	Quark Recombination	4-91
4.3.3.1	Parton Fragmentation and Its Limitations	4-92
4.3.3.2	The Recombination Formalism	4-93
4.3.3.2.1	Basic Theory	4-93
4.3.3.2.2	Different Implementations of Instantaneous Recombination	4-94
4.3.3.2.3	Dynamical Recombination	4-95
4.3.3.3	Connection with other Hadronization Models	4-96
4.3.3.4	Experimental Evidence for Recombination	4-97
4.3.3.4.1	Hadron Spectra and Ratios	4-98
4.3.3.4.2	Elliptic Flow	4-98
4.3.4	Summary and conclusions	4-102

5	Primordial Bulk Plasma Dynamics in Nuclear Collisions at RHIC	5-1
5.1	Hydrodynamics and Transport Properties of QCD Matter (U. HEINZ)	5-1
5.1.1	Introduction	5-1
5.1.2	The equations of relativistic hydrodynamics.	5-2
5.1.2.1	Ideal fluid dynamics for perfect fluids	5-2
5.1.2.2	Dissipative fluid dynamics for viscous relativistic fluids.	5-4
5.1.2.3	Transport equations for the dissipative flows	5-4
5.1.2.3.1	Standard dissipative fluid dynamics (first-order or Navier-Stokes theory)	5-5
5.1.2.3.2	Second-order Israel-Stewart theory	5-6
5.1.3	The beginning and end of the hydrodynamic stage in heavy-ion collisions	5-7
5.1.3.1	Initialization	5-8
5.1.3.1.1	Glauber model	5-9
5.1.3.1.2	Color Glass Condensate theory and KLN model	5-11
5.1.3.1.3	Non-central collisions and initial fireball eccentricity	5-12
5.1.3.2	Decoupling and freeze-out	5-13
5.1.3.2.1	Two-stage decoupling	5-13
5.1.3.2.2	Final hadron momentum spectra	5-17
5.1.4	The nuclear equation of state	5-18
5.1.5	Phenomenology of the transverse expansion	5-20
5.1.5.1	Radial expansion in central collisions	5-21
5.1.5.2	Anisotropic flow in non-central collisions.	5-23
5.1.6	Comparison with experiment	5-28
5.1.6.1	Azimuthally integrated momentum spectra	5-29
5.1.6.1.1	Rapidity distributions	5-29
5.1.6.1.2	Transverse momentum and transverse mass distributions at midrapidity	5-30
5.1.6.2	Anisotropic transverse momentum spectra from deformed fireballs	5-35
5.1.6.2.1	Elliptic flow as an early fireball signature	5-35
5.1.6.2.2	Elliptic flow at RHIC	5-36
5.1.6.2.3	Implications: Rapid thermalization and "strongly coupled quark-gluon plasma" (sQGP)	5-39
5.1.6.3	Signs of viscosity	5-42
5.1.6.3.1	Spectra and elliptic flow at midrapidity	5-42
5.1.6.3.2	Centrality and rapidity dependence of elliptic flow	5-44
5.1.6.3.3	Multiplicity scaling of elliptic flow	5-45
5.1.6.3.4	Towards extracting the QGP viscosity.	5-46
5.1.7	Epilogue	5-47
5.2	Collective Phenomena in Non-Central Nuclear Collisions (S.A. VOLOSHIN, A.M. POSKANZER, R. SNELLINGS)	5-54
5.2.1	Introduction	5-54
5.2.1.1	Unique observable	5-54
5.2.1.2	Definitions: flow and nonflow, the reaction and participant planes.	5-55
5.2.2	Experimental methods	5-56
5.2.2.1	Event plane method	5-56
5.2.2.2	Two and many particle correlations	5-59
5.2.2.3	q -distributions, Lee-Yang Zeros, Bessel and Fourier transforms.	5-60
5.2.2.4	Methods comparison: sensitivity to nonflow and flow fluctuations	5-62
5.2.3	Anisotropic flow: results and physics	5-65
5.2.3.1	General	5-65
5.2.3.1.1	Interplay of anisotropic and radial flow	5-66
5.2.3.1.2	Flow amplification by coalescence	5-67
5.2.3.2	Directed flow	5-68
5.2.3.2.1	Physics of directed flow	5-68
5.2.3.2.2	System size and energy dependence; extended longitudinal scaling	5-69

5.2.3.3	Elliptic flow	5-70
5.2.3.3.1	In-plane elliptic flow	5-70
5.2.3.3.2	Low density and ideal hydro limits, v_2/ϵ plot	5-70
5.2.3.3.3	Viscous effects	5-73
5.2.3.3.4	Initial eccentricity and v_2 fluctuations	5-75
5.2.3.3.5	(Pseudo)rapidity dependence	5-77
5.2.3.3.6	Low p_T region: mass splitting	5-77
5.2.3.3.7	Constituent quark number scaling	5-80
5.2.3.3.8	High p_T region	5-83
5.2.3.3.9	Rare probes	5-85
5.2.3.4	Higher harmonics	5-87
5.2.4	Conclusion and outlook	5-88
5.3	Gluon Saturation and the Formation Stage of Heavy Ion Collisions (L. McLERRAN)	5-95
5.3.1	Introduction	5-95
5.3.2	Motivation for the Color Glass Condensate	5-97
5.3.3	Mathematics of the Color Glass Condensate	5-100
5.3.4	Phenomenological Consequences of the Color Glass Condensate	5-102
5.3.5	The Glasma and High Energy Nuclear Scattering	5-104
5.3.6	Thermalization of the Glasma	5-110
5.3.7	Conclusions	5-111
5.4	Hadron Multiplicities in Ultra-Relativistic Nuclear Collisions (G. ROLAND) .	5-114
5.4.1	Introduction	5-114
5.4.2	Multiplicity data	5-115
5.4.3	Mid-rapidity multiplicity densities	5-116
5.4.3.1	Energy dependence of $dN_{ch}/d\eta$	5-116
5.4.3.2	Centrality and system-size dependence of $dN_{ch}/d\eta$	5-117
5.4.3.3	Factorization of energy and centrality dependence	5-119
5.4.3.3.1	Energy and centrality factorization of p_T distributions	5-123
5.4.4	Charged particle $dN_{ch}/d\eta$ distributions	5-124
5.4.4.1	Energy dependence and limiting fragmentation	5-124
5.4.4.2	Centrality and system size dependence of $dN_{ch}/d\eta$ distributions	5-126
5.4.4.3	Total charged particle multiplicity	5-128
5.4.4.4	Comparison to p+p, e^+e^- and d+Au data	5-128
5.4.4.5	Predictions for multiplicity distributions at in Pb+Pb collisions at the LHC	5-129
5.4.5	Summary	5-130
6	Selective Tracer Signals of the QCD Plasma State	6-1
6.1	Color Deconfinement and Charmonium Production in Nuclear Collisions (L. KLUBERG, H. SATZ)	6-1
6.1.1	Introduction	6-1
6.1.2	Theory	6-3
6.1.2.1	Heavy Quarks and Quarkonia	6-3
6.1.2.2	Quarkonium Binding and Dissociation	6-4
6.1.2.3	Thermal Quarkonium Dissociation	6-6
6.1.2.3.1	Interaction Range and Color Screening	6-6
6.1.2.3.2	Potential Model Studies	6-9
6.1.2.3.3	Charmonium Correlators	6-13
6.1.2.4	Charmonium Production in Hadronic Collisions	6-14
6.1.2.4.1	Elementary Collisions	6-14
6.1.2.4.2	$p - A$ Collisions	6-16
6.1.2.4.3	Nuclear Collisions	6-19

6.1.2.4.4	Suppression by Comover Collisions	6-20
6.1.2.4.5	Suppression by Color Screening	6-20
6.1.2.4.6	Enhancement through Regeneration	6-21
6.1.2.4.7	Transverse Momentum Behavior	6-22
6.1.2.5	Summary of the Theoretical Status	6-23
6.1.3	Experiment	6-24
6.1.3.1	Charmonium Experiments at the CERN-SPS	6-24
6.1.3.1.1	The Nuclear Dependence of Charmonium Production	6-24
6.1.3.1.2	Normal Charmonium Production	6-25
6.1.3.1.3	The First Hints of an Anomaly in Pb-Pb Collisions	6-28
6.1.3.1.4	Anomalous J/ψ Suppression in Pb-Pb Collisions	6-28
6.1.3.1.5	J/ψ suppression versus the centrality of the collision	6-30
6.1.3.1.6	The transverse momentum dependence of J/ψ	6-33
6.1.3.1.7	J/ψ survival pattern: from p-p to Pb-Pb	6-36
6.1.3.2	Features of ψ' Suppression at SPS Energies	6-37
6.1.3.3	More Results from SPS and RHIC	6-39
6.1.3.3.1	J/ψ Suppression in In-In Collisions at 158 GeV	6-40
6.1.3.3.2	J/ψ Suppression in A-A Collisions at $\sqrt{s} = 200$ GeV	6-42
6.1.3.4	Discussion and Evaluation	6-43
6.1.3.5	Summary of the Experimental Status	6-45
6.1.4	Outlook	6-48
6.2	Charmonium from Statistical Hadronization of Heavy Quarks – a Probe for Deconfinement in the Quark-Gluon Plasma (P. BRAUN-MUNZINGER, J. STACHEL)	6-53
6.2.1	Introduction	6-53
6.2.2	Status of thermal production of hadrons in relativistic nucleus-nucleus collisions	6-55
6.2.3	The statistical hadronization model	6-58
6.2.3.1	Procedures	6-59
6.2.3.2	On relevant time scales and medium effects	6-60
6.2.4	Statistical hadronization model confronts charmonium data at SPS and RHIC energies	6-61
6.2.4.1	SPS data	6-62
6.2.4.2	RHIC data	6-62
6.2.5	Effects of medium modifications on charmed hadron and charmonium production	6-64
6.2.5.1	Charm conservation equation	6-65
6.2.5.2	Results	6-66
6.2.6	Charmonium production at LHC energy	6-67
6.2.7	Summary and outlook	6-69
6.3	Photon Production in Hot and Dense Strongly Interacting Matter (C. GALE)	6-74
6.3.1	Introduction	6-74
6.3.2	Photon production: General principles	6-75
6.3.2.1	Photons from thermal hadrons	6-75
6.3.2.2	Photons from thermal partons	6-77
6.3.3	Photons from nuclear collisions at CERN SPS energies	6-80
6.3.4	Photons from nuclear collisions at RHIC energies	6-82
6.3.4.1	A theoretical interlude on jet quenching	6-82
6.3.4.2	Photons from Jet-Medium Interactions	6-86
6.3.4.3	Non-Thermal Sources	6-87
6.3.5	Photon yields at RHIC	6-88
6.3.5.1	1D Bjorken expansion	6-88
6.3.5.2	Photon yields and relativistic hydrodynamics	6-90
6.3.6	Tagging jets with electromagnetic radiation	6-93
6.3.7	Conclusions and outlook	6-96

6.4	Jet quenching (D. D'ENTERRIA)	6-100
6.4.1	Introduction	6-100
6.4.2	Jet quenching and parton energy loss in QCD matter	6-100
6.4.2.1	Hard probes of hot and dense QCD matter	6-100
6.4.2.2	Mechanisms of in-medium energy loss	6-102
6.4.2.2.1	Energy losses in QED	6-103
6.4.2.2.2	Energy losses in QCD	6-105
6.4.2.2.2.1	QCD collisional energy loss	6-105
6.4.2.2.2.2	QCD radiative energy loss	6-106
6.4.2.2.2.3	Heavy-quark radiative energy loss ("dead cone" effect)	6-107
6.4.2.3	Phenomenological consequences of parton energy loss	6-107
6.4.2.3.1	High- p_T (leading) hadron spectra	6-108
6.4.2.3.2	High- p_T di-hadron correlations	6-108
6.4.2.3.3	Jet spectra, jet shapes, and fragmentation functions	6-109
6.4.3	Parton energy loss phenomenology	6-109
6.4.3.1	QCD factorisation in high- p_T hadron and jet production in AA collisions	6-109
6.4.3.2	Jet quenching models	6-111
6.4.3.2.1	BDMPS-LCPI & ASW	6-112
6.4.3.2.2	DGLV	6-113
6.4.3.2.3	Higher Twist (HT)	6-114
6.4.3.2.4	AMY	6-115
6.4.3.2.5	Model comparison	6-116
6.4.3.3	Jet quenching Monte Carlo's	6-117
6.4.3.4	Parton energy loss in AdS/CFT	6-117
6.4.4	High- p_T leading hadron suppression: data vs. theory	6-118
6.4.4.1	High- p_T hadron spectra in proton-proton and proton-nucleus collisions	6-119
6.4.4.2	High- p_T hadron spectra in nucleus-nucleus collisions	6-120
6.4.4.2.1	Magnitude of the suppression: medium properties	6-120
6.4.4.2.2	Centre-of-mass energy dependence	6-123
6.4.4.2.3	p_T -dependence of the suppression	6-125
6.4.4.2.4	Centrality (system-size) dependence	6-125
6.4.4.2.5	Path-length dependence	6-126
6.4.4.2.6	Non-Abelian (colour factor) dependence	6-126
6.4.4.2.7	Heavy-quark mass dependence	6-128
6.4.5	High- p_T di-hadron ϕ , η correlations: data vs. theory	6-130
6.4.5.1	Azimuthal correlations: away-side quenching and energy loss	6-131
6.4.5.2	Azimuthal correlations: away-side broadening and "conical" emission	6-132
6.4.5.3	Pseudo-rapidity correlations: near-side "ridge"	6-134
6.4.6	Jet observables in AA collisions	6-134
6.4.6.1	Full jet reconstruction in AA collisions	6-135
6.4.6.1.1	Jet clustering algorithms	6-135
6.4.6.1.2	Underlying event subtraction	6-137
6.4.6.1.3	Jet energy corrections	6-138
6.4.6.2	Jet spectra	6-139
6.4.6.3	Jet shapes	6-140
6.4.6.4	Medium-modified fragmentation functions	6-141
6.4.6.4.1	Photon-jet correlations	6-142
6.4.7	Summary	6-143
6.5	Jet Quenching in Heavy Ion Collisions (U.A. WIEDEMANN)	6-150
6.5.1	Introduction	6-150
6.5.2	Jets in the absence and in the presence of a medium	6-152
6.5.2.1	Parametric estimates relevant for embedding hard processes in the medium	6-153

6.5.4.2.3	Multiple gluon emission	6-176
6.5.4.2.4	BDMPs, Z, ASW, GLV, ... and all that	6-177
6.5.4.3	Elastic interactions between projectile and medium	6-179
6.5.4.4	Monte Carlo Formulations of parton propagation in the medium	6-180
6.5.4.4.1	Parton shower in the vacuum	6-181
6.5.4.4.2	Simulating elastic interactions	6-182
6.5.4.4.3	Simulating inelastic processes.	6-182
6.5.4.5	Applying the AdS/CFT correspondence to in-medium parton propagation	6-185
7	Summary: The QCD Plasma State	7-1
7.1	Viscous Properties of Strongly Interacting Matter at High Temperature (J.I. KAPUSTA).	7-1
7.1.1	Introduction	7-1
7.1.2	Atomic and Molecular Systems	7-3
7.1.3	Relativistic Dissipative Fluid Dynamics	7-7
7.1.4	Shear Viscosity	7-8
7.1.5	Bulk Viscosity	7-10
7.1.6	Gauge/Gravity Correspondence	7-12
7.1.7	Observable Consequences	7-15
7.1.8	Conclusion	7-16
7.2	Structure of Strongly Coupled Quark-Gluon Plasma (E. SHURYAK)	7-19
7.2.1	Introduction	7-19
7.2.2	Heavy Ion Collisions	7-19
7.2.2.1	Collective flows and hydrodynamics	7-19
7.2.2.2	Jets quenching and correlations	7-24
7.2.2.3	Charmonium suppression	7-27
7.2.3	From lattice QCD to sQGP	7-29
7.2.3.1	The QCD phase diagram	7-29
7.2.3.2	Main QGP properties from the lattice	7-32
7.2.3.3	Polyakov loop, "Higgsing" and deformations of QCD	7-35
7.2.4	Electric-magnetic duality and finite- T gauge theories	7-37
7.2.4.1	The "magnetic scenario" for near- T_c region	7-38
7.2.4.2	Molecular dynamics for magnetic/electric plasmas	7-39
7.2.5	AdS/CFT duality	7-42
7.2.5.1	Black holes and AdS/CFT for pedestrians	7-42

7.2.5.2	CFT: a relative of QCD without any scales	7-45
7.2.5.3	The first example of AdS/CFT at work: new Coulomb law	7-46
7.2.5.4	Conformal plasma in equilibrium and the idea of relaxation	7-49
7.2.6	AdS/CFT and hydrodynamics	7-50
7.2.6.1	Linearized hydrodynamics	7-50
7.2.6.2	Bulk viscosity	7-51
7.2.6.3	Deriving gravity dual to (non-linear) hydrodynamics	7-52
7.2.6.4	Gauge theory equilibration as black hole creation	7-57
8	The Final Expansion State of Relativistic Nuclear Collisions	8-1
8.1	Hadronic Fluctuations and Correlations (V. KOCH)	8-1
8.1.1	Introduction	8-1
8.1.2	Fluctuations and Correlations in a thermal system and from Lattice QCD.	8-3
8.1.3	Fluctuations and correlations of conserved charges	8-6
8.1.4	Observables	8-12
8.1.4.1	Fluctuations of Ratios	8-15
8.1.4.1.1	Examples:	
	Fluctuations of the mean transverse momentum and particle ratios	8-17
8.1.5	Fluctuations and the QCD critical point	8-20
8.1.6	Summary and Conclusions	8-24
8.2	Femtoscopically Probing the Freeze-out Configuration in Heavy Ion Collisions (M.A. LISA, S. PRATT)	8-28
8.2.1	Introduction	8-28
8.2.1.1	The urgency of space-time in heavy ion studies	8-29
8.2.1.2	The necessity of systematics in heavy ion studies.	8-29
8.2.1.3	Organization of this paper	8-30
8.2.2	A Femtoscopy Primer	8-30
8.2.2.1	What is measured - correlation functions and source functions	8-30
8.2.2.2	Representation of the source function	8-33
8.2.2.2.1	Reference frames and coordinate systems	8-33
8.2.2.2.2	Gaussian parameterizations	8-33
8.2.2.2.3	Non-Gaussian parameterizations	8-34
8.2.3	Present Status: The Scenario Supported by Femtoscopic Data	8-35
8.2.3.1	Longitudinal Flow: Rapidity and m_T Systematics	8-35
8.2.3.2	Transverse Flow: m_T Systematics and Non-identical Particle Correlations.	8-37
8.2.3.3	Overall Source Size and Shape	8-39
8.2.3.4	Anisotropic freezeout configuration: systematics relative to the reaction plane	8-40
8.2.3.5	Resonance decay contribution: non-Gaussian "imaging" fits	8-42
8.2.3.6	Putting it all together: factorization and the overall picture	8-42
8.2.3.7	What about small systems?	8-44
8.2.4	Using Transport Models and Femtoscopy to Determine Bulk Properties.	8-45
8.2.5	Femtoscopic Expectations at the LHC	8-48
8.2.5.1	Nothing New Under the Sun (NNUS) Scenario	8-48
8.2.5.2	Boltzmann Transport Calculations	8-49
8.2.5.3	Hydrodynamical Calculations	8-51
8.2.5.3.1	Source Length Scales	8-51
8.2.5.3.2	Source Shape	8-52
8.2.5.4	Proton Collisions	8-54
8.2.6	Summary	8-55
