Preface IX

1	Introduction	1
1.1	Magnetic Loops and Open Flux Tubes as Basic Structural Elements in Solar and Stellar Coronae	1
1.2	Data of Observations and Types of Coronal Loops	2
1.3	The MHD Approach for Coronal Plasma	5
	References	8
2	Coronal Magnetic Loop as an Equivalent Electric Circuit	9
2.1	A Physical Model of an Isolated Loop	10
2.2	The Formation of Magnetic Tubes by Photospheric Convection	12
2.3	The Structure of the Coronal Part of a Flux Tube	18
2.4	Diagnostics of Electric Currents	21
2.4.1	“Warm” Loops	21
2.4.2	“Hot X-ray” Loops	22
2.4.2.1	Flare Magnetic Loops	23
2.5	The Equivalent Electric Circuit	25
2.6	Inductive Interaction of Magnetic Loops	29
2.7	Waves of Electric Current in Arcades of Coronal Magnetic Loops	30
2.8	Magnetic Loops above Spots	33
	References	36
3	Resonators for MHD Oscillations in Stellar Coronae	39
3.1	Eigenmodes of Coronal Loops: The Plasma Cylinder Approach and the Dispersion Equation	40
3.1.1	Trapped Modes	43
3.1.1.1	Global Sausage Mode	45
3.1.1.2	Global Kink Mode	45
3.1.2	Leaky Modes	46
3.1.2.1	Sausage Mode	46
3.1.2.2	Kink Modes	51
3.1.3	Ballooning Modes	53

3.2	MHD Resonator at $\sim 1R_O$ in the Solar Corona	54
3.3	Excitation Mechanisms for Loop Oscillations	57
3.3.1	External Triggers	57
3.3.2	Parametric Excitation of Loop Oscillations by p-Modes	59
3.3.3	Internal Excitation	60
3.3.3.1	The Excitation of the Sausage Mode by Instantaneous Energy Release	61
3.3.3.2	The Excitation of the Global Kink Mode by Chromosphere Evaporation	62
3.3.3.3	The Excitation of the Sausage Mode by High-Energy Protons under the Bounce-Resonance Condition	63
	References	64
	Further Reading	66
4	Propagating MHD Waves in Coronal Plasma Waveguides	67
4.1	MHD Waves in Vertical Coronal Magnetic Flux Tubes	68
4.1.1	Effects of Stratification	69
4.2	Propagating Waves in Coronal Loops	74
4.2.1	Propagating Compressible Waves in Coronal Loops	74
4.2.2	Transverse Waves in Coronal Loops	78
4.3	Waves in Coronal Jets	80
4.4	Evolution of Short-Wavelength, Fast Magnetoacoustic Waves	83
4.5	Alfvén Wave Phase Mixing	87
4.5.1	Damping of Alfvén Waves because of Phase Mixing	88
4.5.2	Enhanced Nonlinear Generation of Oblique Fast Waves by Phase-Mixed Alfvén Waves	89
	References	91
5	Prominence Seismology	93
5.1	Prominence Models	93
5.2	Prominence Oscillations	95
5.3	The Heating Effect	97
5.4	Nonlinear Oscillations: Dynamical Modes	99
5.5	Flare Processes in Prominences	108
5.6	Stellar and Interstellar Prominences	109
	References	111
6	The Coronal Loop as a Magnetic Mirror Trap	113
6.1	Particle Distribution in a Coronal Loop	113
6.1.1	Gyrosynchrotron Emission from a Flaring Loop	116
6.2	Kinetic Instabilities in a Loop	118
6.2.1	A Loop as an Electron Cyclotron Maser	118
6.2.2	The Plasma Mechanism of the Radio Emission from Coronal Loops	119
6.2.3	Instabilities of Whistlers and Small-Scale Alfvén Waves	123

6.3	The Fine Structure of Radio Emission from Coronal Loops	125
6.3.1	Sudden Reductions	126
6.3.2	Zebra Pattern	126
6.3.3	Diagnostics of Coronal Plasma Using the Fine Structure of Radio Emission	129
	References	129
7	Flaring Events in Stellar Coronal Loops	131
7.1	Particle Acceleration and Explosive Joule Heating in Current-Carrying Loops	131
7.1.1	Where Is the Acceleration Region Located?	132
7.1.2	Large-Scale Electric Fields in Flare Loops	133
7.1.2.1	The Charge-Separation Electric Field	134
7.1.2.2	Inductive Electric Field	136
7.1.3	The Impulsive and Pulsating Modes of Acceleration	138
7.1.4	The Current of Accelerated Electrons (Colgate's Paradox)	140
7.1.5	Explosive Joule Energy Release. The Role of Flute Instability and Cowling Conductivity	140
7.2	The Kinematics of Energetic Particles in a Loop and the Consequent Radiation	143
7.2.1	Diffusion Regimes of Accelerated Particles in Coronal Loops	145
7.2.2	Consequences of the Strong Diffusion of Energetic Particles	149
7.2.2.1	Turbulent Propagation of Fast Electrons in a Loop	149
7.2.2.2	Turbulent Propagation of Superthermal Ions: the Absence of Linear Polarization in $H\alpha$ Emission of a Solar Flare	155
7.2.2.3	Time Delays in Hard X-Ray and γ -Ray Emission	158
7.2.2.4	Transformation of Energetic Particle Spectra in a Coronal Loop	160
	References	161
	Further Reading	163
8	Stellar Coronal Seismology as a Diagnostic Tool for Flare Plasma	165
8.1	Modulation of Flaring Emission by MHD Oscillations	165
8.1.1	Modulation of Gyrosynchrotron Emission	166
8.1.2	Modulation of Plasma Radiation	167
8.1.3	Modulation of the Electron Precipitation Rate	168
8.2	Global Sausage Mode and Diagnostics of the Solar Event of 12 January 2000	169
8.3	Dissipative Processes in Coronal Loop for MHD Modes	171
8.4	The Stellar Flare Plasma Diagnostics from Multiwavelength Observations Stellar Flares	172
8.4.1	Pulsations in the Optical Range (U,B) in an EV Lac Flare	173
8.4.2	Quasi-Periodic Oscillations (QPOs) from EQ Peg	174
8.4.3	Soft X-Ray Pulsations from a Flare of AT Mic	176
8.5	Diagnostics of Electric Currents in Stellar Atmospheres	177

8.5.1	Observational Evidence for Energy Accumulation and Dissipation in Coronal Magnetic Loop	178
8.5.2	Pulsating Microwave Emission from AD Leo	181
	References	183
9	Heating Mechanisms in Stellar Coronae	185
9.1	Wave Heating	186
9.1.1	Parametric Excitation of Acoustic Oscillations	188
9.1.2	The Energy of Acoustic Oscillations	189
9.1.3	Acoustic Wave Heating Function	191
9.1.4	Thermal Balance in a Coronal Magnetic Loop	192
9.1.5	Hot X-Ray Loops in the Solar Corona	194
9.1.6	Magnetic Loops in Late-Type Stars	195
9.2	Ohmic Dissipation of Electric Currents	196
9.3	Heating by Microflares	199
	References	203
10	Loops and QPOs in Neutron Stars and Accretion Disk Coronae	205
10.1	The Origin of Fast QPOs from Magnetars and Diagnostics of Magnetar Corona	205
10.1.1	A Brief Overview of the Existing Models	206
10.1.2	An Equivalent Electric RLC Circuit	208
10.1.3	The Flare of SGR 1806-20 on 27 December 2004	209
10.1.4	Excitation of High-Frequency Current Oscillations of the Current in Coronal Loop	210
10.2	Coronae of Accretion Disks	212
10.2.1	Accretion Disk Corona of Cyg X-1	213
10.2.2	QPOs in Accretion Disks	215
	References	215
11	Conclusions	217
	References	218
	Index	219
