

Contents

1	Introduction	1
1.1	Problem Statement	1
1.2	Contributions of the Book	5
1.3	Outline of the Book	6
2	Review of the Literature	7
2.1	Robotics Technical Terms	7
2.2	Robots in Industrial Applications	8
2.3	Service Robots	8
2.4	Solving Complex Tasks Autonomously	10
2.4.1	Overview of Planner Types	11
2.4.2	Planning Benchmarks	11
2.4.3	Household Tasks	11
2.5	High-Level Planning	12
2.5.1	Classical Task Planning	12
2.5.2	Planner Integration	14
2.5.3	Task Planning for Robotics Applications	15
2.5.4	Summary	16
2.6	Grasp Planning	16
2.6.1	Summary	19
2.7	Path Planning	19
2.7.1	Planning Algorithms	19
2.7.2	Path Planner Inputs	21
2.7.3	Selection of Goal Configurations	21
2.7.4	Summary	22
2.8	Robot Placement	22
2.8.1	Selection of Fixed Base Positions	22
2.8.2	Base Movement during Task	24
2.8.3	Summary	25
2.9	Motion Primitives	25

2.10	Robot-Specific Knowledge	26
2.11	Summary	26
3	Robot Performance Indices	27
3.1	Robot Design Criteria	27
3.1.1	Task-Oriented Design	27
3.1.2	General Purpose Robot Design	28
3.2	Workspace Analysis	31
3.3	Naive Sampling Based Approach	32
3.4	Model Requirements	34
3.5	Summary	35
4	Modeling the Robot Workspace	37
4.1	The Tool Frame (TCP)	37
4.2	The Reachability Sphere Map	38
4.2.1	Discretization of $\mathbb{R}^3$	39
4.2.2	Construction of the Model	40
4.2.3	Reachability Predictions	45
4.2.4	Visualization of the Model	46
4.3	Characteristics of the Representation	49
4.3.1	The Number of Samples	49
4.3.2	The Sphere Diameter l_c	51
4.3.3	The Number of Points n_p per Sphere	54
4.3.4	The z-Orientation Step Size Δ_o	55
4.3.5	Reachability of TCP Poses	55
4.4	Visualization of Workspace Structure	56
4.4.1	Analyzing the Structures in the Workspace	57
4.4.2	Capturing the Structure to Construct a Map	57
4.4.3	Evaluation of the Shape Maps	63
4.4.4	Reachability Estimation Using the Mixed Shape Map	66
4.4.5	Memory and Computation Time	67
4.5	Summary	68
5	Visualization and Setup Evaluation	71
5.1	Robot Arm Workspace Visualization	71
5.1.1	Visualization for Industrial Robots	71
5.1.2	Visualization for Specific Tasks	74
5.2	Workspace Comparisons for HRI	76
5.2.1	Detailed Problem Analysis	76
5.2.2	Kinematic Descriptions	77
5.2.3	Workspace Comparison	82
5.2.4	Evaluation	85
5.3	Summary	92

6	Application in Planning	93
6.1	Placement for 3D Trajectories	94
6.1.1	Detailed Problem Analysis	94
6.1.2	The Search Pattern	96
6.1.3	The Search for the Trajectory in the Workspace	97
6.1.4	Computing the Robot Base Position	99
6.1.5	Computational Complexity	101
6.1.6	Discretization Issues	102
6.1.7	Brute-Force Search vs. Model-Based Search	102
6.1.8	Validation of Solutions	103
6.1.9	Robots Working in the Kitchen	104
6.1.10	Following the Motion of a Tumbling Satellite	105
6.2	Human-Like Path Planning	109
6.2.1	The RULA Evaluation Criterion	110
6.2.2	Combining RULA and Capability Maps	113
6.2.3	RULA and the Inverse Kinematics	114
6.2.4	RULA Sampling for Path Planners	118
6.2.5	Evaluation	119
6.3	Summary	123
7	Conclusion and Outlook	125
7.1	Conclusion	125
7.2	Future Work	126
A	Abbreviations and Glossary	129
A.1	Abbreviations	129
A.2	Mathematical Symbols	130
A.3	Mathematical Notations	130
A.4	Random Sampling	130
B	Kinematics Descriptions	131
B.1	Homogeneous Matrices	131
B.2	DLR LWR Kinematics	132
B.3	Kuka LWR Kinematics	132
B.4	Schunk PowerCube Arm Kinematics	133
B.5	Kuka Krl6 Kinematics	135
B.6	Human Kinematics	135
B.7	TCP Frames	136
B.7.1	TCP Frames Used in Section 4.3	136
B.7.2	TCP Frames Used in Section 5.2.2.3	136
