1. <i>Introduction to Positron Annihilation</i>	
By P. Hautojärvi and A. Vehanen (With 15 Figures)	1
1.1 Positron Method	2
1.2 Annihilation of Free Positrons	3
1.3 Experimental Techniques	5
1.3.1 Lifetime Measurements	5
1.3.2 Angular Correlation Measurements	7
1.3.3 Line-Shape Measurements	9
1.3.4 Correlation Between Lifetime and Momentum	11
1.4 Positronium Formation and Annihilation	11
1.5 Topics of Positron Studies	14
1.5.1 Metals	14
1.5.2 Metal Defects	14
1.5.3 Ionic Crystals	15
1.5.4 Slow Positrons and Positronium	15
1.5.5 Gases and Low-Temperature Phenomena	17
1.5.6 Molecular Solids	18
1.5.7 Positronium Chemistry	20
1.6 Summary	21
References	22
2. <i>Electron Momentum Densities in Metals and Alloys</i>	
By P.E. Mijnarends (With 15 Figures)	25
2.1 Theory	26
2.1.1 Momentum Density	27
2.1.2 Many-Body Effects	30
2.1.3 Positron Thermalization, Effective Mass and Other Thermal Effects	33
a) Thermalization	33
b) Effective Mass	35
c) Other Thermal Effects	35

2.2	Wave Functions	37
2.2.1	Positron Wave Function	37
2.2.2	Electron Band Structure and Wave Functions	39
	a) OPW Method	40
	b) APW Method	42
	c) KKR and Related Methods	44
	d) Other Methods	45
2.2.3	Symmetry Properties of $A_j(p,k)$	45
	a) Radial Behavior	46
	b) Directional Symmetry	47
2.3	Experimental Techniques	47
2.3.1	2γ Angular Correlation Measurements	47
2.3.2	Rotating Specimen Method	51
2.3.3	Doppler Broadening	51
2.3.4	Specimen Preparation	52
2.3.5	Corrections	52
	a) "Beam Profile" Correction	52
	b) Diffraction Effect	53
	c) Angular Resolution and Positron Thermal Motion	53
	d) Finite Slit Length	54
2.3.6	Analysis	54
2.4	Momentum Density Work in Metals	58
2.4.1	Alkali Metals	58
2.4.2	Other Simple Metals	61
2.4.3	Oriented Graphite, Diamond, Silicon, and Germanium	64
2.4.4	Noble Metals	66
2.4.5	Transition Metals and Rare Earths	70
2.5	Disordered Alloys and Ordered Metallic Compounds	74
2.5.1	Disordered Alloys	74
2.5.2	Metallic Compounds	79
2.6	Conclusion	80
	References	81
3.	<i>Positron Studies of Lattice Defects in Metals</i>	
	By R.N. West (With 12 Figures)	89
3.1	Annihilation Parameters for Defect Studies	90
	3.1.1 The Defect Trapping Phenomenon and Its Effect	90
	3.1.2 Positron States and Lifetime Spectra	91
	3.1.3 Momentum Density Parameters	96
3.2	Monovacancies in Equilibrium	98
	3.2.1 The Naive Approach to Temperature Effects	98

3.2.2	Prevacancy Effects	100
3.2.3	Other Complications	102
3.2.4	Vacancy Formation Enthalpy Measurements	108
3.2.5	Characteristic or Threshold Temperatures	115
3.2.6	Pressure Experiments	118
3.3	Nonequilibrium Studies	119
3.3.1	The "Many Defects" Problem	119
3.3.2	Deformation, Quenching, and Irradiation Experiments	121
3.3.3	Annealing Studies	124
3.3.4	Positron Studies of Voids	126
3.4	Defect Studies in Alloys	129
3.4.1	Defect vs Impurity Problems	129
3.4.2	Vacancy Studies	131
3.4.3	Phase Transitions and Boundary Effects	134
3.5	Liquid and Amorphous Metals	136
	References	139
4.	<i>Positrons in Imperfect Solids: Theory</i>	
	By R.M. Nieminen and M.J. Manninen (With 16 Figures)	145
4.1	Positron Distribution, Mobility, and Trapping	146
4.1.1	Positron Implantation, Slowing Down, and Thermalization	146
4.1.2	Mobility and Diffusion	147
4.1.3	Positron Distribution in Solids	149
4.1.4	Annihilation Characteristics and Electron-Positron Corre- lation in Pure Metals	152
4.1.5	Effect of Temperature on Annihilation Characteristics	157
4.1.6	Trapping at Defects	158
4.1.7	Self-trapping	162
4.2	Defects in Metals	164
4.2.1	Electronic Structure of Defects	164
4.2.2	Positron-Defect Interaction	168
4.2.3	Annihilation Characteristics	272
4.2.4	Applications	174
	a) Vacancies	175
	b) Dislocations	179
	c) Impurities and Alloys	181
	d) Vacancy Clusters	185
	e) Surfaces	188
4.3	Nonmetals	191
4.4	Conclusions	192
	References	192

5. <i>Positrons in Ionic Solids</i> . By A. Dupasquier (With 8 Figures)	197
5.1 Experimental Methods	198
5.1.1 Standard Experimental Techniques	198
5.1.2 Special Experimental Techniques	199
a) Two-Parameter Age-Momentum Measurements	199
b) Magnetic Quenching Measurements	200
5.1.3 Experimental Difficulties	201
a) Analysis of Multicomponent Lifetime Spectra	201
b) Analysis of Multicomponent Momentum Distributions	203
c) Source and Surface Contributions to Lifetime Spectra	203
d) Radiation Damage Due to the Positron Source	204
5.2 Annihilation Characteristics in Alkali Halides	204
5.2.1 Room Temperature Measurements on Crystals with Low Defect Concentration	204
a) Lifetime Spectra	204
b) Angular Correlation Curves	206
c) Doppler-Broadened Annihilation Line Shape	209
d) Three-Quantum Annihilation	210
5.2.2 Temperature Effects	210
5.2.3 Annihilation in Crystals with High Defect Concentration	212
a) Thermal Defect Generation	213
b) Thermal Quenching	213
c) Additive Coloration	215
d) $F \rightleftharpoons F^-$ Conversion	217
e) Aggregation of F Centers	217
f) Doping with Divalent Impurities	217
g) Defect Creation by Ionizing Radiation	218
h) Plastic Deformation	221
i) Mixed Crystals	221
5.2.4 Magnetic Field Effects	221
a) Crystals with Low Defect Concentration	222
b) Additively Colored Crystals	224
c) Doped Crystals	224
5.3 Positron States in Alkali Halides	225
5.3.1 Intrinsic States	225
a) Nearly Free Positrons in a Perfect Lattice	225
b) Quasi-Positronium in Perfect Crystals	228
5.3.2 Annihilation Centers	231
a) cA Center	231
b) $^aA^+$ Center	232
c) $^cA^-$ and $^cA^-(Ca^{2+})$ Centers	233

d) aA Center	233
e) $^a_2A^+$ and $^a_3A^+$ Centers	234
5.3.3 Kinetics of State Formation	234
a) Slowing Down	234
b) Quasi-Positronium Formation in Perfect Crystals	235
c) Formation of A Centers	236
5.4 Annihilation in Other Ionic Compounds	238
5.4.1 Hydrides of Alkali and Alkaline-Earth Metals	238
5.4.2 Copper, Silver, Gold, Thallium Halides	238
5.4.3 Alkaline-Earth Halides	239
5.4.4 Alkaline-Earth Oxides	240
