

Contents

1. Introduction	1
2. Fundamentals of Surface Enhanced Raman Scattering	6
2.1 Basic Experimental Observations	7
2.2 Theoretical Concepts	11
2.3 Present State of Understanding	17
3. Experimental	19
3.1 Arrangements	19
3.2 Sample Preparation and Characterization	20
4. Pyridine Adsorption	26
4.1 Coldly Evaporated Silver Films	27
4.1.1 General Spectral Features	27
4.1.2 Coverage Dependence	33
4.1.3 Annealing Behaviour	37
4.1.4 Excitation Spectra	39
4.1.5 Comparison of Results from Various Experiments	46
4.2 Coldly Evaporated Copper and Gold Films	48
4.3 Surfaces Prepared with Various Techniques	51
4.3.1 Silver	51
4.3.2 Other Materials	53
4.4 Discussion and Conclusions	54
5. Hydrocarbon Adsorption	59
5.1 Open-Chain Hydrocarbons on Silver	59
5.1.1 Alkanes	59
5.1.2 Ethylene	60
5.1.3 Propylene and Butylene	73
5.1.4 Acetylene	76
5.2 Cyclic Hydrocarbons	83
5.2.1 Benzene	83
5.2.2 Benzene Derivatives	86
5.3 Summary	87
	VII

6. Carbon Monoxide Exposure and Carbonaceous Deposits	89
6.1 Adsorbed Carbon Monoxide	90
6.2 Carbonaceous "Impurity" Deposits	94
6.3 Amorphous Carbon	96
6.4 Summary	97
7. Oxygen Exposure	99
7.1 Silver Samples	101
7.2 Other	105
7.3 Summary	106
8. Water Adsorption	107
9. Other Adsorbates	112
9.1 Diatomic Species	112
9.2 Azabenzenes	113
9.3 Pyridine Derivatives	114
9.4 Polymer and Langmuir-Blodgett Coatings	114
9.5 Dye Molecules	115
9.6 List of Systems Studied so Far	115
10. Selected Applications and Related Surface Enhanced Phenomena	118
10.1 Tribology	118
10.2 Catalysis	119
10.3 Other Surface Enhanced Processes	120
11. Summary and Outlook	124
Appendix: Recent Developments and Results	127
References	133
Subject Index	155
Material Index	159
