

Contents

Part I: Invited Lectures

R. Caferra, M. Herment and N. Zabel
User-oriented theorem proving with the ATINF graphic proof editor 2

L. Fariñas del Cerro and A. Herzig
A modal analysis of possibility theory 11

D. Gabbay and A. Hunter
*Making inconsistency respectable: a logical framework
for inconsistency in reasoning* 19

E. Orłowska
Relational proof systems for some AI logics 33

Gh. Păun
Formal grammars and cognitive architectures 48

J. Wiedermann
*Efficient simulations of nondeterministic computations
and their speed-up by the ring of cooperating machines* 59

Part II: Selected Contributions

M. Freund
A semantic characterization of disjunctive relations 72

A. Hunter
*Execution of defeasible temporal clauses for building
preferred models* 84

M. Kłopotek
*On the phenomenon of flattening “flexible prediction”
concept hierarchy* 99

J. Lang	
<i>Possibilistic logic as a logical framework for min-max discrete optimisation problems and prioritized constraints</i>	112
Z. Markov	
<i>An approach to data-driven learning</i>	127
P. Marquis	
<i>Extending abduction from propositional to first-order logic</i>	141
U. Petermann	
<i>Building in equational theories into the connection method</i>	156
J. Pfalzgraf	
<i>Logical fiberings and polycontextural systems</i>	170
M. Rusinowitch and L. Vigneron	
<i>Automated deduction with associative commutative operators</i>	185
A. Strasser	
<i>Towards a lattice of knowledge representation systems</i>	200
J. Šeřfránek	
<i>Inconsistencies handling: nonmonotonic and paraconsistent reasoning</i>	214
G. Taučaitė and J. Laurinskas	
<i>An approach to structural synthesis of data processing programs</i>	220
J. Vauzeilles	
<i>Negation as failure and intuitionistic three-valued logic</i>	227

Part III: Appendix

A. Miola	
<i>Symbolic Computation and Artificial Intelligence</i>	244
