

C O N T E N T S

I. INTRODUCTION

I.1	Some Probabilistic Aspects in Classical and Quantum Physics	1
I.1a	Brownian Motion. Mechanics of Particles Submitted to Random Disturbation	1
I.1b	From Feynman Path Integral to Probabilistic Formulations of Quantum Physics	4
I.2	Probabilistic Interpretation of Quantum Mechanics and Probability Theory	7
I.2a	Historical Remarks	7
I.2b	The Wigner Approach	10
I.2c	Probabilistic Description of Commuting Observables ...	12
I.3	Jacobi and Madelung Fluid	15
I.3a	The Hamilton-Jacobi-Fluid	16
I.3b	The Madelung Fluid	19

II. KINEMATICS OF STOCHASTIC DIFFUSION PROCESSES

II.1	Brownian Motion	22
II.2	Stochastic Integration	31
II.3	Diffusion Process	34
II.4	Kinematics of Diffusion Processes	37
II.5	The Time-Reversed Diffusion Process	44
II.5a	Brownian Motion with Lebesgue Measure as Initial Distribution	44
II.5b	Time-Reversed Diffusion Process	46
II.6	Stochastic Acceleration	47
II.7	Some Basic Examples	51
II.7a	The Wiener Process	51

II.7b	The Brownian Bridge	51
II.7c	The Bessel Process	53
II.7d	The Ornstein-Uhlenbeck Process	55
III. NELSON STOCHASTIC DYNAMICS - NEWTONIAN PROCESSES		
III.1	Stochastic Newton Law	60
III.2	Conservative Newtonian Diffusion Processes	61
III.3	Mechanics of Conservative Newtonian Process	62
III.4	Conservative Newtonian Processes with Stationary Distribution	67
III.5	Unattainability of the Nodes for Stationary Diffusion Processes	69
III.6	Diffusion in an External Electromagnetic Field	74
III.7	Newtonian Diffusion on Riemannian Manifold	75
IV. GLOBAL EXISTENCE FOR DIFFUSIONS WITH SINGULAR DRIFTS		
IV.1	Introduction	82
IV.2	Existence of Nelson's Diffusion Processes	84
IV.2a	Heuristics	84
IV.2b	Unattainability of the Nodes and Global Existence	85
IV.3	Application to Stochastic Mechanics	92
IV.4	Alternative Methods to Construct Singular Diffusions .	94
V. STOCHASTIC VARIATIONAL PRINCIPLES		
V.0	Introduction	97
V.1	The Classes $S(p)$ and $S(p, F)$	97
V.2	Strongly Convex Functionals	100
V.3	The Yasue Action	101
V.4	Construction of Diffusion Processes by a Forward Stochastic Variational Principle	105
V.5	Other Approaches to Stochastic Calculus of Variations.	110

VII

VI. TWO VIEWPOINTS CONCERNING QUANTUM AND STOCHASTIC MECHANICS

VI.1	General Remarks	114
VI.2	Interference	115
VI.3	Observables - Measurement	116
VI.3a	Observables	116
VI.3b	Momentum Process	117
VI.3c	Repeated Measurements: A Case Against Stochastic Mechanics?	119
VI.4	Indeterminacy Relations	123
VI.5	Locality	126
VI.6	Scattering Theory	127
VI.7	Spinning Particle	129
VI.8	Pauli-Principle	130
VI.9	The Connection Between Stochastic Mechanics and Euclidean Quantum Mechanics	131
VI.10	The Semiclassical Limit	133
VI.11	Bose Quantum Field Theory	135

VII. A NON-QUANTAL LOOK AT STOCHASTIC MECHANICS

VII.1	General Remarks	137
VII.2	Trapping Phenomena and Formation of Spatial Patterns .	140
VII.2a	A Model of the Formation of Jet-Streams in the Protosolar Nebula	140
VII.2b	Cloud Covering of the Planets	142
VII.2c	The Van Allen Radiation Belts	143
VII.3	A Model for Transport in a Plasma	145

APPENDIX

A1.	Notations and Conventions	147
A2.	Conditioning	148
A3.	Stochastic Processes	149
A4.	Martingales	150

VIII

A5.	Weak Convergence and Measures on Metric Spaces	151
A6.	Stochastic Ito Integrals	153
A7.	Definition and Characteristics of Quadratic Variation	156
