

Contents

1. <i>Introduction</i> . By J.A. DeSanto	1
1.1 A Brief History	3
1.2 Outline of the Book	4
References	6
2. <i>Theoretical Methods in Ocean Acoustics</i> . By J.A. DeSanto (With 24 Figures)	7
2.1 Conservation Laws, Fluid and Acoustic Equations	9
2.1.1 Conservation Laws and Fluid Equations	9
2.1.2 A Parabolic Equation	11
2.1.3 Perturbation Method	14
2.1.4 Combined Acoustic-Internal Wave Equations	15
2.1.5 Sound Speed	18
2.2 Propagation in Deterministic Media	19
2.2.1 One-Dimensional Problems	19
a) The Pekeris Waveguide	20
b) Alternative Representations	26
c) Solvable Profiles	28
d) Inverse Propagation	30
2.2.2 Two-Dimensional Problems	31
a) Ray-Theory	32
b) Corrected Parabolic Approximation	33
c) Conformal Mapping	36
2.2.3 Multi-Dimensional Problems	39
2.3 Wave Propagation in a Random Medium	40
2.3.1 The Hierarchy Problem	41
2.3.2 Coherent Waves	44
2.3.3 Coherence Function and Related Work	47
2.3.4 Propagation of the Coherence Function in a Waveguide	50
2.4 Scattering from Rough Surfaces	54
2.4.1 The Rayleigh Hypothesis	55
2.4.2 Periodic Surfaces	57
a) Rectangular Periodic Surfaces	57
b) The Sinusoidal Surface	62

2.4.3	Arbitrary Deterministic Surfaces	64
a)	Green's Function Formalism	64
b)	Diagrams	66
2.4.4	Random Surfaces	67
a)	Gaussian Surfaces	67
b)	Dyson Equation	69
c)	Coherent Specular Intensity	70
d)	Remarks	73
	References	73
3.	<i>Numerical Models of Underwater Acoustic Propagation</i>	
	By F.R. DiNapoli and R.L. Deavenport (With 21 Figures)	79
3.1	Range-Independent Models	80
3.1.1	Depth-Dependent Green's Function (Impedance Formulation)	82
a)	Matrizant Method	83
3.1.2	Direct Numerical Integration: Fast Field Program (FFP)	90
3.1.3	Normal Mode (and Branch Line Integral) Models	92
a)	Stickler (EJP Cuts), Bartberger (Pekeris Cuts)	92
b)	Stickler's Residue Contribution	95
c)	Bartberger's Residue Contribution (Pekeris Cuts)	97
d)	Branch Cuts and Branch Cut Integrals	98
e)	Numerical Considerations	101
3.1.4	Depth Dependent Green's Function (Traveling-Wave Formulation)	103
3.1.5	Multipath Expansion Models	107
3.1.6	Connection Between Modes and Rays	117
3.1.7	Quantitative Model Assessment	121
3.1.8	Waveform Prediction Models	131
3.2	Range-Dependent Models	135
3.2.1	Split Step Algorithm for Parabolic Equation	135
3.2.2	Parabolic Decomposition Method	137
3.2.3	Finite Differences	138
3.2.4	Range-Dependent Normal Mode Theory	140
3.2.5	Range-Dependent Ray Theory Models	141
3.2.6	Finite Element Approach	142
a)	The Finite Element Method	143
b)	Merits/Shortcomings of the FEM	146
c)	Transparent Boundary Simulation Techniques	147
d)	Solid Domain Boundaries	148
e)	Fluid Domain Boundaries	149
f)	Combined Solid-Fluid Domain Boundaries	150
g)	Fluid Finite Elements	153
	References	154

4. *Physical Modeling of Underwater Acoustics*

By J.G. Zornig (With 17 Figures)	159
4.1 Background Information	159
4.1.1 Definition and Purpose	159
4.1.2 Relationship to Ocean Experimentation	160
4.1.3 Historical Overview	160
4.2 Water Facilities	162
4.2.1 Model Tanks	162
4.2.2 Lakes and Bays	163
4.3 Targets	164
4.3.1 Wind Driven Surfaces	164
4.3.2 Fixed Surfaces	168
4.3.3 Volume Targets	169
4.4 Instrumentation and Signal Processing	170
4.4.1 Sources	170
4.4.2 Data Acquisition	173
4.4.3 Signal Processing	174
4.5 Results of Physical Model Experimentation	176
4.5.1 Scattered Intensity	176
4.5.2 Coherence Studies	178
4.5.3 Second-Order Coherence	179
4.5.4 Frequency Spreading	181
4.6 Remarks	184
References	185

5. *Oceanography in Underwater Acoustics*

By J.P. Dugan (With 15 Figures)	187
5.1 Properties of Seawater	187
5.2 Ocean Variability	191
5.2.1 Ocean Climatology	192
5.2.2 Ocean Weather	196
5.2.3 Internal Waves	207
5.2.4 Fine Structure	214
5.2.5 Near-Surface Structure	216
References	221

6. *Inverse Methods for Reflector Mapping and Sound Speed Profiling*

By N. Bleistein and J.K. Cohen (With 9 Figures)	225
6.1 The POFFIS Identity	225
6.1.1 Derivation of the POFFIS Identity	226
6.1.2 The Limited Aperture Problem for the POFFIS Identity	230

6.2	An Inverse Method for Determining Small Inhomogeneities in a Medium .	234
6.2.1	An Integral Equation for Three-Dimensional Velocity Variation	235
6.2.2	Direct Inversion for Backscatter over a Medium with Two-Dimensional Velocity Variation	237
6.2.3	Direct Inversion for a Case with Separated Source and Receiver	240
6.2.4	Direct Inversion for a One-Dimensional Problem	241
6.2.5	Direct Inversion in Free Space	241
	References	242
7.	<i>Acoustic Probing of Space-Time Scales in the Ocean</i>	
	By R.P. Porter (With 23 Figures)	243
7.1	Sound Probes of Ocean Currents	245
7.1.1	SOFAR Floats for Lagrangian Current Measurements	245
7.1.2	Current Measurements by Reciprocal Transmissions	246
7.2	Acoustic Fluctuations as a Measure of Ocean Dynamics	247
7.2.1	CW Transmissions and Tides	248
7.2.2	Short Pulse Transmissions Along Single Paths	249
7.2.3	Spatial and Temporal Fluctuations of CW Transmissions	250
7.2.4	Spectra of Phase and Amplitude Fluctuations	252
7.3	Sound Speed Variations and Internal Gravity Waves	260
7.3.1	Internal Gravity Wave Spectra	261
7.3.2	Fluctuations in the Index of Refraction	264
7.4	Acoustic Fluctuation Theories and Their Relationship to Ocean Dynamics	265
7.4.1	Acoustic Fluctuation Theories and Their Relationship to Ocean Dynamics	266
7.4.2	Effect of Large Scale Flows on Acoustic Amplitude and Phase ..	267
7.4.3	Effect of Internal Waves on Acoustic Amplitudes and Phases ...	269
7.4.4	Multipath Fluctuations for Stable Paths	272
7.4.5	Stability of Single Paths	274
7.5	Implications for Ocean Probing	276
	References	277
