

# Contents

<b>1. The Phenomenon of Photorefractive</b>	<b>1</b>
1.1 Photosensitive Centers	1
1.2 Mechanism for Optical Information Recording	3
1.2.1 Linear Approximation of Information Recording	3
1.2.2 Diffusion and Drift Models	4
1.3 Electro-Optic Effects	9
1.3.1 Longitudinal and Transverse Electro-Optic Effects	9
1.3.2 Electro-Optic Effects in PRCs	13
<b>2. Holography, and Optical Information Processing Systems</b>	<b>16</b>
2.1 Holographic Recording of Wave Fronts	16
2.2 Classification and Properties of Holograms	19
2.2.1 Thin and Thick Holograms	19
2.2.2 Diffraction Efficiency and Selectivity of Phase Holograms	20
2.2.3 Specific Features of Holograms in PRCs	22
2.3 Coherent Optical Information Processing Systems	23
<b>3. Salient Features of Photorefractive Crystals for Holography</b>	<b>26</b>
3.1 Diffraction Efficiency	26
3.1.1 Volume Grating	27
3.1.2 Thin Grating	28
3.1.3 Thin Grating with Electrodes	30
3.2 Transfer Function	32
3.2.1 Experimental Determination of the Transfer Function	33
3.3 Dynamic Range and Information Capacity	35
3.4 Sensitivity	38
3.5 Speed of Operation and Storage Time	40
3.6 Resolution	41
<b>4. Formation of an Electric-Field Grating</b>	<b>42</b>
<b>During Holographic Recording in PRCs</b>	<b>42</b>
4.1 Main Assumptions and Equations	42
4.2 Holographic Recording in a Monopolar Photoconductor	
Without Trap Saturation	45
4.2.1 Fundamental Equation for the Formation	
of an Electric-Field Grating	45
4.2.2 Steady-State Holograms	46
4.2.3 Characteristic Time and Rate of the Hologram Buildup	47

4.3	Trap Saturation (Violation of Quasi-Neutrality)	49
4.4	Holographic Recording in PRCs with Bipolar Photoconductivity	52
4.5	Nonstationary Holographic Recording Mechanisms	53
4.5.1	Moving Holograms in PRCs Under an External DC Field	53
4.5.2	Recording of Resonantly Moving Interference Patterns	55
4.5.3	Recording Under an External Alternating Electric Field	57
4.6	Effect of Contact-Induced Phenomena on the Dynamics of Charge and Field Formation	59
4.7	Additional Remarks	63
<b>5.</b>	<b>Light Diffraction from Anisotropic Volume Phase Gratings</b>	<b>64</b>
5.1	Principles of Light Diffraction from Isotropic Volume Phase Gratings	64
5.1.1	Kinematic Approximation	65
5.1.2	Dynamic Approximation	66
5.2	Basic Types of Light Diffraction	68
5.2.1	The Bragg Conditions for Intermode Diffraction	70
5.3	Anisotropic Phase Holograms in PRCs	73
5.3.1	Space-Charge Gratings in $\text{LiNbO}_3$	74
5.3.2	Electric-Field Gratings in $\text{LiNbO}_3$	75
5.4	Diffraction Efficiency of Anisotropic Phase Holograms in Birefringent PRCs	76
5.4.1	Orientation Dependences of Amplitudes of Diffraction Eigenprocesses in $\text{LiNbO}_3$	76
5.4.2	Efficient Intramode Diffraction in $\text{BaTiO}_3$	78
5.5	Diffraction Efficiency of Anisotropic Phase Holograms in Cubic PRCs	79
5.5.1	Cubic Crystals with High Optical Activity	80
5.5.2	Cubic Crystals with a Nonsplit Wave-Vector Surface	81
5.6	Selective Properties of Volume Phase Holograms	83
5.6.1	Anomalous Selective Properties of Intermode Diffraction	84
5.6.2	Wideband Reconstruction of Volume Holograms at Different Wavelengths	85
<b>6.</b>	<b>Fundamentals of Dynamic Holography</b>	<b>88</b>
6.1	Diffraction of an Interference Pattern of Two Plane Waves from a Fixed Matched Phase Grating	88
6.1.1	Finite Increments of Intensities and Phases of the Light Waves Behind a Thin Grating Layer	89
6.1.2	Intensity Transfer via Shifted Phase Grating	90
6.1.3	Phase Transfer via Unshifted Phase Grating	92
6.2	Self-Diffraction from a Dynamic Volume Phase Hologram	92
6.2.1	Steady-State Two-Wave Mixing in PRCs	93
6.2.2	Gain Factor of PRCs	94
6.3	Four-Wave Mixing via an Isotropic Phase Grating	95
6.3.1	Steady-State Four-Wave Mixing via an Isotropic Transmission Phase Grating in PRCs	95

6.3.2	Reflectivity of a Four-Wave Mixing Geometry . . . . .	97
6.4	Four-Wave Mixing via Anisotropic Phase Gratings . . . . .	99
6.4.1	Four-Wave Mixing via Anisotropic Phase Gratings with Positive Feedback . . . . .	99
6.4.2	Four-Wave Mixing via Anisotropic Phase Gratings Without Feedback . . . . .	102
6.5	Optical Oscillators and Self-Pumped Phase Conjugators . . . . .	102
6.5.1	Ring Oscillator Using Two-Wave Mixing in PRCs . . . . .	103
6.5.2	Linear Geometry of Passive Phase Conjugators . . . . .	105
6.5.3	Single-Mirror and Mirrorless Geometries of Passive Phase Conjugators . . . . .	106
6.5.4	Ring Geometry of Passive Phase Conjugator . . . . .	106
6.5.5	Double Phase-Conjugate Mirror . . . . .	106
6.5.6	Concluding Remarks . . . . .	107
7.	<b>The Physics of Electro-Optic Spatial Light Modulators . . . . .</b>	<b>109</b>
7.1	Dynamics of Charge Formation in Photorefractive SLMs Under Nonuniform Illumination . . . . .	109
7.2	Light Propagation in Anisotropic Crystals . . . . .	111
7.3	The Electro-Optic Effect in Cubic Crystals . . . . .	115
7.4	Light Diffraction in a Thin Cubic Electro-Optic Crystal . . . . .	119
7.5	The SLM Transfer Function . . . . .	123
7.5.1	The Longitudinal Electro-Optic Effect . . . . .	125
7.5.2	The Transverse Electro-Optic Effect . . . . .	128
7.6	Sensitivity of Electro-Optic SLMs . . . . .	131
7.6.1	The Longitudinal Electro-Optic Effect . . . . .	132
7.6.2	The Transverse Electro-Optic Effect . . . . .	133
7.7	Noise and Phase Distortions . . . . .	133
8.	<b>Spatial Light Modulators . . . . .</b>	<b>136</b>
8.1	Pockels Readout Optical Modulator . . . . .	136
8.1.1	Description of the PROM . . . . .	137
8.1.2	Operation of the PROM . . . . .	138
8.1.3	Frequency Dependence of Diffraction Efficiency and Sensitivity . . . . .	140
8.1.4	Speed of Operation . . . . .	142
8.1.5	Contrast Modification and Image Subtraction . . . . .	142
8.2	The Spatial Light Modulator PRIZ . . . . .	144
8.2.1	Transfer Function . . . . .	146
8.2.2	PRIZ Sensitivity . . . . .	150
8.2.3	Inherent Noise . . . . .	151
8.2.4	Phase Distortion . . . . .	152
8.2.5	Speed of Operation . . . . .	153
8.2.6	Dynamic Image Selection . . . . .	153
8.2.7	Recording of "Latent" Images . . . . .	155
8.2.8	Photoinduced Piezoelectric Phase Modulation . . . . .	156

8.3	Titus and Phototitus	158
8.3.1	Titus	159
8.3.2	Phototitus	160
8.3.3	Parameters of Titus and Phototitus	161
8.4	Optically Addressed Microchannel Spatial Light Modulator	165
8.5	Photorefractive SLMs with a Spatial Carrier Frequency	168
9.	<b>Applications of Photorefractive Crystals</b>	173

9.4.2	Self-Sweeping of the Laser Frequency	192
9.4.3	Cavities with a Passive Ring PCM	193
9.4.4	Laser Cavities with a Reflection Holographic PCM	193
9.4.5	Phase Locking of Independent Lasers	194
9.5	Optical Gyroscopes	195
9.5.1	Fiber-Optic Gyroscopes with Photorefractive PCMs	196
9.5.2	Fiber-Optic Gyroscope with a Passive Ring PCM	198
9.6	Holographic Memory	199
9.6.1	Permanent Holographic Memory	200
9.6.2	Read-Write Holographic Memory	201
9.6.3	Associative Holographic Memory	202
9.7	Modulation and Deflection of Laser Beams	202
9.7.1	Electric Control of the Bragg Condition	202
9.7.2	Gratings with a Variable Spacing	204
9.7.3	Enhanced Reflection from Spatial Light Modulators	207
9.8	Spectrum and Correlation Analysis of Images	207
9.8.1	Coherent Optical Correlators	207
9.8.2	SLMs in Input Systems	210
9.8.3	Holographic Recording of Matched Filters in PRC	215
9.9	Nonlinear Processing in the Image Plane	216
9.9.1	Image Contouring	216

9.9.2 Brightness Inversion	218
9.9.3 Optical Logic Elements	218
9.10 Nonlinear Processing in the Spatial Frequency Plane	220
9.10.1 Image Contouring	220
9.10.2 Inspection of Periodic Structures	221
9.11 Additional Remarks	221
<b>Appendix: Photorefractive Crystals</b>	222
A1 Lithium Niobate (Metaniobate) $\text{LiNbO}_3$	223
A2 Lithium Tantalate $\text{LiTaO}_3$	226
A3 Barium Titanate $\text{BaTiO}_3$	227
A4 Strontium Barium Niobate $\text{Sr}_x\text{Ba}_{1-x}\text{Nb}_2\text{O}_6$ (SBN)	230
A5 Sodium Barium Niobate $\text{Ba}_2\text{NaNb}_5\text{O}_{15}$ (NBN)	232
A6 Potassium Niobate $\text{KNbO}_3$	232
A7 Bismuth Silicon Oxide $\text{Bi}_{12}\text{SiO}_{20}$ (BSO)	233
A8 Bismuth Germanium Oxide $\text{Bi}_{12}\text{GeO}_{20}$ (BGO)	237
A9 Bismuth Titanium Oxide $\text{Bi}_{12}\text{TiO}_{20}$ (BTO)	238
A10 Semiconductor Photorefractive Crystals	239
A11 Other Photorefractive Crystals and Media	241
