Preface	11
Chapter I Interference: historiography and physics	13
I.1 The “mystery” of Young’s theory	13
I.2 New approach	15
I.3 What is “Young’s wave theory”?	17
I.4 “Interference” or “superposition”?	17
I.5 What is the “acceptance of a theory”?	24
Chapter II Thomas Young and the problem of intersecting sounds	25
Section I: <i>Young</i>	25
II.1 What did Young discover about interference?	25
II.2 Young on interference of sound	26
Section II: <i>Young’s predecessors</i>	32
II.3 Reinforcement of sound	32
II.4 Destruction of sound	35
II.5 Do intersecting sound waves interact?	37
II.6 Mathematical approach to independence of sound	39
II.7 Harmonics	41
II.8 The third sound	44
II.9 Summary	45
Chapter III Young on interference of mechanical waves	47
III.1 Standing waves	47
III.2 Tides	49
III.3 Coherence of mechanical waves	52
III.4 Response to the concept of interference of sound	55
a) Robison	55
b) Gough	57
c) Later response	61
III.5 Summary	62

Chapter IV	Discovery of the principle of interference of light	65
IV.1	Optical background	65
IV.2	Transition from acoustics to optics	74
IV.3	The problem of mathematical representation of light	80
IV.4	What is the "law of interference"?	84
IV.5	The principle of interference and the theory of interference	86
Chapter V	Young's theory of interference and its application	91
Section I:	<i>Interference of reflected and refracted light</i>	92
V.1	The colors of thin films	92
V.2	The colors of the "thick plates"	95
V.3	The colors of the "mixed plates"	98
V.4	The colors of supernumerary rainbows	100
Section II:	<i>Interference of diffracted light</i>	102
V.5	The colors of striated surfaces	102
V.6	Diffraction of light by a narrow body: internal fringes	105
V.7	Diffraction of light by a narrow body: external fringes	113
V.8	The two-slit experiment	118
Section III:	<i>Young on coherence of light</i>	124
V.9	The condition of frequency	126
V.10	The condition of direction	127
V.11	The condition of path difference	128
V.12	The condition of a common origin	130
V.13	The condition of the size of a light source	133
V.14	Summary	136
Chapter VI	Response to the principle of interference (1801–1815)	138
VI.1	Early comments (1801–1805): general survey	139
VI.2	British reviews of Young's theory (1801–1805)	143
a)	"Non-experts"	144
b)	<i>The Critical Review</i>	145
c)	<i>The Monthly Review</i>	146
d)	<i>The Edinburgh Magazine</i>	148
e)	<i>The Edinburgh Review</i>	151

VI.3	Later response (1807–1815)	155
VI.4	Summary	162
Chapter VII	Fresnel and the principle of interference	165
VII.1	First period (1815–1816)	166
a)	Rediscovery of the principle of interference of light	166
b)	Diffraction by a narrow body	173
c)	Reflection and refraction of light	175
d)	Other applications	176
e)	Early definitions of the principle of interference and conditions of coherence	179
VII.2	Second period (1816–1818)	185
VII.3	Third period (1819–1822)	191
VII.4	Summary	197
Chapter VIII	Response to Fresnel's principle of interference	199
VIII.1	Arago	200
VIII.2	Reception of Fresnel's first paper	208
VIII.3	Contest on diffraction	218
VIII.4	Response to Fresnel's prize-winning memoir	224
VIII.5	Principle of interference and the wave theory	227
VIII.6	Principle of interference and the emission theory	232
VIII.7	Understanding of coherence after Fresnel	235
VIII.8	Young's role after 1815	239
VIII.9	Summary	241
Conclusions		242
Appendix		245
Bibliography		250
Index		269
