

## Preface to the second edition — V

### **1 Nucleosides: structure, nomenclature and solution equilibria — 1**

- 1.1 Structure and nomenclature — 1
- 1.1.1 Rare nucleosides — 2
- 1.1.2 Cyclonucleosides — 5
- 1.1.3 C-Nucleosides and carbocyclic nucleosides — 6
- 1.2 Tautomeric and protolytic equilibria — 7
- 1.3 Conformational equilibria — 11
- 1.3.1 Puckering of the sugar ring — 11
- 1.3.2 Rotation around the C1'-N bond — 16
- 1.3.3 Rotation around the C4'-C5' bond — 17
- 1.4 Metal ion complexes of nucleosides — 17
- 1.5 Optical properties of nucleosides — 20
- 1.5.1 UV absorption — 20
- 1.5.2 Circular dichroism (CD) — 21
- 1.5.3 Fluorescent nucleosides — 21
- 1.6 Base stacking — 22
- Further reading — 24
- References — 24

### **2 Nucleosides: synthesis, transformation reactions and hydrolytic stability — 29**

- 2.1 Synthesis of nucleosides and their congeners — 29
- 2.1.1 Synthesis of the N-glycosidic bond — 29
- 2.1.2 Synthesis of cyclonucleosides — 32
- 2.1.3 Synthesis of C-nucleosides — 33
- 2.1.4 Synthesis of carbocyclic nucleosides — 37
- 2.2 Transformation reactions of nucleosides — 39
- 2.2.1 Transformation of purine nucleosides — 39
- 2.2.2 Transformation of pyrimidine nucleosides — 42
- 2.2.3 Metal-ion-promoted transformations — 44
- 2.3 Hydrolytic stability of nucleosides — 46
- 2.3.1 Acid-catalyzed hydrolysis — 46
- 2.3.2 Base-catalyzed and nucleophilic reactions — 49
- 2.3.3 The effect of metal ions on hydrolysis of nucleosides — 50
- Further reading — 51
- References — 51

|          |                                                                     |
|----------|---------------------------------------------------------------------|
| <b>3</b> | <b>Nucleotides — 57</b>                                             |
| 3.1      | Nomenclature — 57                                                   |
| 3.2      | Protolytic equilibria and metal ion complexing — 59                 |
| 3.3      | Synthesis of nucleotides and their congeners — 62                   |
| 3.3.1    | Synthesis of nucleoside monophosphates — 62                         |
| 3.3.2    | Synthesis of nucleoside phosphorothioates and phosphoramidates — 65 |
| 3.3.3    | Synthesis of nucleoside diphosphates — 65                           |
| 3.3.4    | Synthesis of nucleoside triphosphates — 66                          |
| 3.3.5    | Synthesis of nucleoside oligophosphates — 68                        |
| 3.4      | Hydrolysis of nucleotides — 69                                      |
| 3.4.1    | Hydrolysis of nucleoside monophosphates — 69                        |
| 3.4.2    | Hydrolysis of nucleoside triphosphates — 72                         |
|          | Further reading — 74                                                |
|          | References — 75                                                     |
| <br>     |                                                                     |
| <b>4</b> | <b>Nucleosides and nucleotides in chemotherapy — 79</b>             |
| 4.1      | Antiviral nucleosides — 79                                          |
| 4.2      | Anticancer nucleosides — 82                                         |
| 4.3      | Antibiotic nucleosides — 83                                         |
| 4.4      | Nucleotides in chemotherapy — 84                                    |
|          | Further reading — 89                                                |
|          | References — 89                                                     |
| <br>     |                                                                     |
| <b>5</b> | <b>Oligonucleotides: synthesis — 93</b>                             |
| 5.1      | Synthesis of oligodeoxyribonucleotides — 93                         |
| 5.1.1    | Preparation of building blocks — 93                                 |
| 5.1.2    | Coupling chemistries — 96                                           |
| 5.1.3    | Global protecting group strategies — 102                            |
| 5.1.4    | Solid supports — 103                                                |
| 5.1.5    | Linkers — 104                                                       |
| 5.1.6    | Phosphate protecting groups — 107                                   |
| 5.1.7    | Base moiety protecting groups — 108                                 |
| 5.1.8    | 5'-O-Protecting groups — 110                                        |
| 5.1.9    | Trimeric building blocks — 111                                      |
| 5.1.10   | Tandem oligonucleotide synthesis — 111                              |
| 5.1.11   | Deprotection and purification — 111                                 |
| 5.2      | Synthesis of oligoribonucleotides — 114                             |
| 5.3      | Enzymatic synthesis of oligonucleotides — 120                       |
| 5.3.1    | Synthesis of oligodeoxyribonucleotides — 120                        |
| 5.3.2    | Synthesis of oligoribonucleotides — 121                             |

|          |                                                                                                                          |
|----------|--------------------------------------------------------------------------------------------------------------------------|
| 5.4      | Synthesis of phosphodiester-modified oligonucleotides and their congeners — <b>122</b>                                   |
| 5.4.1    | Synthesis of stereoregular phosphorothioate oligonucleotides — <b>122</b>                                                |
| 5.4.2    | Synthesis of boranephosphonate oligonucleotides — <b>125</b>                                                             |
| 5.4.3    | Synthesis of phosphorodiamidate and thiophosphoramidate morpholino (PMO) oligomers — <b>127</b>                          |
| 5.5      | Solution-phase synthesis of oligonucleotides — <b>130</b>                                                                |
| 5.5.1    | Convergent synthesis — <b>130</b>                                                                                        |
| 5.5.2    | Synthesis on a soluble support — <b>131</b>                                                                              |
| 5.5.3    | Synthesis with solid-supported reagents — <b>137</b>                                                                     |
|          | Further reading — <b>138</b>                                                                                             |
|          | References — <b>139</b>                                                                                                  |
| <b>6</b> | <b>Oligonucleotides: reactions — 149</b>                                                                                 |
| 6.1      | Cleavage and isomerization of RNA phosphodiester linkages: small molecular models — <b>149</b>                           |
| 6.1.1    | Cleavage by Brönsted acids and bases — <b>149</b>                                                                        |
| 6.1.2    | Cleavage by multifunctional catalysts — <b>155</b>                                                                       |
| 6.1.3    | Reactions of internucleosidic phosphotriesters — <b>157</b>                                                              |
| 6.2      | Dinucleoside(3',5')monophosphates as RNA models: interplay between conformation and intramolecular stacking — <b>159</b> |
| 6.3      | Cleavage of oligoribonucleotides: the effect of base sequence and secondary structure on the cleavage rate — <b>160</b>  |
| 6.4      | Cleavage of phosphate-modified analogs of oligoribonucleotides — <b>161</b>                                              |
| 6.4.1    | Phosphorothioates and phosphorothiolates — <b>161</b>                                                                    |
| 6.4.2    | Phosphoramidates — <b>164</b>                                                                                            |
| 6.4.3    | C5'-phosphonates — <b>164</b>                                                                                            |
| 6.5      | Metal ion-promoted cleavage of oligoribonucleotides — <b>164</b>                                                         |
| 6.5.1    | Mechanism of cleavage by metal ion complexes — <b>164</b>                                                                |
| 6.5.2    | Metal ion-promoted cleavage of oligoribonucleotides — <b>167</b>                                                         |
| 6.5.3    | Nucleobase-selective cleavage — <b>168</b>                                                                               |
| 6.5.4    | Artificial ribonucleases — <b>169</b>                                                                                    |
| 6.5.5    | Functionalized nanoparticles as artificial ribonucleases — <b>170</b>                                                    |
| 6.6      | Cleavage of oligodeoxyribonucleotide phosphodiester linkages — <b>171</b>                                                |
| 6.6.1    | Cleavage by Brönsted acids and bases — <b>171</b>                                                                        |
| 6.6.2    | Cleavage promoted by metal ions — <b>172</b>                                                                             |
|          | Further reading — <b>174</b>                                                                                             |
|          | References — <b>175</b>                                                                                                  |

|          |                                                                      |
|----------|----------------------------------------------------------------------|
| <b>7</b> | <b>Oligonucleotide conjugates — 183</b>                              |
| 7.1      | Introduction — 183                                                   |
| 7.2      | Reactions used for conjugation — 183                                 |
| 7.3      | Solid-supported synthesis of 5'-O-conjugates — 185                   |
| 7.4      | 5'-Phosphorylation — 186                                             |
| 7.5      | Solid-supported synthesis of 3'-O-conjugates — 189                   |
| 7.6      | Solid-supported synthesis of intrachain conjugates — 191             |
| 7.7      | Glycocluster conjugates — 194                                        |
| 7.8      | Peptide conjugates — 196                                             |
| 7.9      | Photoswitched oligonucleotides — 198                                 |
| 7.10     | Conjugation by in vitro transcription — 200                          |
|          | Further reading — 200                                                |
|          | References — 201                                                     |
| <br>     |                                                                      |
| <b>8</b> | <b>Nucleic acids: DNA — 207</b>                                      |
| 8.1      | Structure of DNA — 207                                               |
| 8.1.1    | Base pairing — 207                                                   |
| 8.1.2    | Categories of DNA helices — 209                                      |
| 8.1.3    | Parallel DNA — 212                                                   |
| 8.1.4    | Circular DNA — 213                                                   |
| 8.1.5    | Triple helical DNA — 213                                             |
| 8.1.6    | G-quadruplexes — 214                                                 |
| 8.1.7    | i-Motifs — 216                                                       |
| 8.2      | Determination of DNA primary and secondary structure — 217           |
| 8.2.1    | Primary structure — 217                                              |
| 8.2.2    | Secondary structure — 220                                            |
| 8.3      | Stability of nucleic acids secondary structure — 222                 |
| 8.4      | Hybridization diagnostics — 225                                      |
| 8.5      | In vivo visualization of DNA — 230                                   |
| 8.6      | Interactions with groove binders, intercalators and metal ions — 231 |
| 8.6.1    | Groove binding — 231                                                 |
| 8.6.2    | Intercalation — 233                                                  |
