

# Table of Contents

|                                                                             |     |
|-----------------------------------------------------------------------------|-----|
| Merging and Splitting Priority Queues and Deques in Parallel . . . . .      | 1   |
| Jingsen Chen                                                                |     |
| Lower Bounds for the Complexity of Functions in a Realistic RAM Model . .   | 12  |
| Nader H. Bshouty                                                            |     |
| On Boolean Decision Trees with Faulty Nodes . . . . .                       | 24  |
| Claire Kenyon, Valerie King                                                 |     |
| Interval Graphs, Interval Orders and the Consistency of Temporal Events . . | 32  |
| Martin Charles Golumbic, Ron Shamir                                         |     |
| Higher Order Functions in First Order Theory . . . . .                      | 43  |
| Andrei Voronkov                                                             |     |
| Reduction Relations in Strict Applicative Languages . . . . .               | 55  |
| Walter Dosch                                                                |     |
| Approximation Algorithms for Minimum Time Broadcast . . . . .               | 67  |
| Guy Kortsarz, David Peleg                                                   |     |
| The Complexity of Reconfiguring Network Models . . . . .                    | 79  |
| Yosi Ben-Asher, David Peleg, Assaf Schuster                                 |     |
| Optimal Mapping in Direct Mapped Cache Environments . . . . .               | 91  |
| Shmuel Gal, Yona Hollander, Alon Itai                                       |     |
| New Algorithms for Generalized Network Flows . . . . .                      | 103 |
| Edith Cohen, Nimrod Megiddo                                                 |     |
| Factoring Polynomials via Relation-Finding . . . . .                        | 115 |
| Victor S. Miller                                                            |     |
| New Resultant Inequalities and Complex Polynomial Factorization . . . . .   | 122 |
| Victor Pan                                                                  |     |
| Can Symmetric Toeplitz Solvers be Strongly Stable? . . . . .                | 137 |
| Elliot Linzer                                                               |     |
| Bounds On Parallel Computation of Multivariate Polynomials . . . . .        | 147 |
| Ilan Sadeh, Amir Averbuch                                                   |     |
| Time-Lapse Snapshots . . . . .                                              | 154 |
| Cynthia Dwork, Maurice Herlihy, Serge A. Plotkin, Orli Waarts               |     |

|                                                                                             |     |
|---------------------------------------------------------------------------------------------|-----|
| Concurrent Timestamping Made Simple . . . . .                                               | 171 |
| Rainer Gawlick, Nancy Lynch, Nir Shavit                                                     |     |
| Distributed Evaluation: A Tool for Constructing Distributed<br>Detection Programs . . . . . | 184 |
| Jean-Michel Hélary, Michel Raynal                                                           |     |
| Foundations of Asymptotical Theory of Determinate Compact<br>Testing . . . . .              | 195 |
| Evgeny V. Luk-Zilberman                                                                     |     |
| Optimal K-Colouring and K-Nesting of Intervals . . . . .                                    | 207 |
| Irith Ben-Arroyo Hartman                                                                    |     |
