

Table of Contents

1. Boundary Elements and the Biharmonic Equation	1
1.1. Introduction	1
1.2. The Elastic Beam	3
1.2.1. Introduction	3
1.2.2. Boundary Element Analysis	6
1.2.3. Example - A Cantilevered Beam	14
1.2.4. A FEM Stiffness Matrix from BEM	18
1.3 Concluding remark	22
2. Two-Dimensional Biharmonic Phenomena	24
2.1. Introduction	24
2.2. Boundary Integral Equation Formulation	27
2.2.1. Theory	27
2.2.2. Boundary Element Formulation	34
2.3. Summary and Concluding remarks	37
3. Element Types for Boundary Discretization	39
3.1. Introduction	39
3.2. Linear Elements	40
3.2.1. Isoparametric Linear Elements	40
3.2.2. Superparametric Linear Elements - Constant Elements	47
3.2.3. Example - Creeping Flow Between Parallel Plates	48
3.3. Quadratic Element	53
3.3.1. Isoparametric Quadratic Elements	53
3.3.2. Subparametric Quadratic Elements	60
3.4. Overhauser Element	65
3.4.1. Isoparametric Overhauser Elements	67
3.4.2. Subparametric Overhauser Elements	71
3.5. Modeling Corners	75
3.6. Summary and Concluding remarks	77

4. Domain Discretization and Internal Point Calculations	79
4.1. Introduction	79
4.2. Domain Discretization	79
4.2.1. Concentrated Source Terms	80
4.2.1.1. Point Source Example - Constant Elements	81
4.2.2. Integral Transformations	83
4.2.2.1. Exact Integrations for Special Circumstances with Linear Elements	86
4.2.2.2. Integration Strategy for a General Parametric element	88
4.2.3. Domain Fanning	89
4.3. Iterative Solution	90
4.4. Internal Point Calculations	94
4.4.1. Exact Integrations Strategy for Linear Elements	95
4.4.2. Integrations Strategy for Higher Order Elements	100
4.5. Summary and Concluding remarks	101
5. Example Analyses	102
5.1. Introduction	102
5.2. Deflections of Thin Plates	103
5.2.1. Circular Clamped Plates	105
5.2.1.1. Concentrated Load at Plate Center	105
5.2.1.2. Uniform Load	107
5.2.1.3. Quadratic Load	110
5.2.1.4. Asymmetric Loading	112
5.2.1.5. Iterative Example - Elastic Foundations	112
5.2.2. Simply Supported Rectangular Plates	114
5.2.2.1. Edge Moments	114
5.2.2.2. Thermal Loads	116
5.2.2.3. Concentrated Load	116
5.2.2.4. Uniform Load	118
5.2.2.5. Hydrostatic Load	120
5.2.2.6. Quadratic Load	120
5.2.2.7. Cubic Load	125
5.2.2.8. Iterative Example - Elastic Foundations	125
5.2.2.9. Iterative Example - In-Plane Forces	128
5.2.2.10. Iterative Example - Variable Thickness	128
5.2.3. Rectangular Plates with Varous Edge Conditions	130
5.2.3.1. Introduction	130
5.2.3.2. One Clamped Edge	132
5.2.3.3. Two Opposite Edges Clamped	132
5.2.3.4. All Edges Clamped	132
5.2.3.5. Iterative Example - All Edges Clamped, Elastic Foundation	136

5.2.4. Plates of Various Shapes	136
5.2.4.1. Introduction	136
5.2.4.2. Simply Supported Triangular Plates	136
5.2.4.3. Triangular Plates with Two or Three Edges Clamped	136
5.2.4.4. Skewed Plates	139
5.2.4.5. Rhombic Plates	139
5.2.4.6. Hexagonal Plates	139
5.2.4.7. Corner Plates	139
5.3. Incompressible Viscous Fluid Flow at Low Reynolds Numbers	143
5.3.1. Introduction	143
5.3.2. Inflow-Outflow Problem	146
5.3.3. Moving-Wall Problem	146
5.3.4. Flow Through a Fibrous Filter	150
5.3.5. Flow in Bearings of Arbitrary Geometries	150
5.4. Concluding Remark	157
6. Computer Program	160
6.1. Introduction	160
6.2. Main Program	160
6.3. Subroutine INPUT	162
6.4. Subroutine FORMGH	169
6.5. Subroutine INTEG	173
6.6. Subroutine INTEG D	177
6.7. Subroutine INTEG Q	180
6.8. Subroutine INTGQD	192
6.9. Subroutine INTEGO	198
6.10. Subroutine INTGOD	208
6.11. Subroutine FAN	214
6.12. Subroutine REDSOL, SOLONL, REDUCE, FWDSL V and BCLSL V	218
6.13. Subroutine ORDER	221
6.14. Subroutine TERNAL	222
6.15. Subroutine OUTPUT	225
6.16. Functions F, FN, FL, FLN	227

6.17. Input Data Structure	229
6.18. Sample Input Data	232
7. General Summary and Concluding Remarks	234
7.1. Summary	234
7.2. Conclusion	235
7.3. Concluding Remarks	240
