Introduction	1
1 The zero-dimensional case: number fields	5
1.1 Class Numbers	5
1.2 Dirichlet L -Functions	8
1.3 The Class Number Formula	11
1.4 Abelian Number Fields	14
1.5 Non-abelian Number Fields and Artin L -Functions . . .	17
2 The one-dimensional case: elliptic curves	23
2.1 General Features of Elliptic Curves	23
2.2 Varieties over Finite Fields	28
2.3 L -Functions of Elliptic Curves	30
2.4 Complex Multiplication and Modular Elliptic Curves . .	33
2.5 Arithmetic of Elliptic Curves	39
2.6 The Tate-Shafarevich Group	43
2.7 Curves of Higher Genus	48
2.8 Appendix	49
2.8.1 B & S-D for Abelian Varieties	50
2.8.2 Bloch's Version of B & S-D	51
2.8.3 1-Motives, Mixed Motives and B & S-D	53
3 The general formalism of L-functions, Deligne cohomology and Poincaré duality theories	57
3.1 The Standard Conjectures	57
3.2 Deligne-Beilinson Cohomology	60
3.3 Deligne Homology	68

3.4	Poincaré Duality Theories	70
4	Riemann-Roch, K-theory and motivic cohomology	79
4.1	Grothendieck-Riemann-Roch	79
4.2	Adams Operations	82
4.3	Riemann-Roch for Singular Varieties	83
4.4	Higher Algebraic K-Theory	84
4.5	Adams Operations in Higher Algebraic K-Theory	93
4.6	Chern Classes in Higher Algebraic K-Theory	96
4.7	Gillet's Riemann-Roch Theorem	100
4.8	Motivic Cohomology	101
5	Regulators, Deligne's conjecture and Beilinson's first conjecture	105
5.1	Borel's Regulator	105
5.2	Beilinson's Regulator	107
5.3	Special Cases and Zagier's Conjecture	109
5.4	Riemann Surfaces	119
5.5	Models over $\text{Spec}(\mathbf{Z})$	124
5.6	Deligne's Conjecture	125
5.7	Beilinson's First Conjecture	128
6	Beilinson's second conjecture	135
6.1	Beilinson's Second Conjecture	135
6.2	Hilbert Modular Surfaces	138
7	Arithmetic intersections and Beilinson's third conjecture	143
7.1	The Intersection Pairing	143
7.2	Beilinson's Third Conjecture	148
8	Absolute Hodge cohomology, Hodge and Tate conjectures and Abel-Jacobi maps	151
8.1	The Hodge Conjecture	152
8.2	Absolute Hodge Cohomology	155
8.3	Geometric Interpretation	158
8.4	Abel-Jacobi Maps	161

8.5	The Tate Conjecture	164
8.6	Absolute Hodge Cycles	167
8.7	Motives	170
8.8	Grothendieck's Conjectures	175
8.9	Motives and Cohomology	178
9	Mixed realizations, mixed motives and Hodge and Tate conjectures for singular varieties	185
9.1	Tate Modules	186
9.2	Mixed Realizations	189
9.3	Weights	193
9.4	Hodge and Tate Conjectures	196
9.5	The Homological Regulator	200
10	Examples and Results	203
10.1	B & S-D revisited	203
10.2	Deligne's Conjecture	209
10.3	Artin and Dirichlet Motives	213
10.4	Modular Curves	216
10.5	Other Modular Examples	223
10.6	Linear Varieties	223
	Bibliography	225
	Index	233
