Abstract iii

Kurzfassung v

1 Introduction 1

1.1 Motivation 1

1.2 Objective 2

1.3 Outline 3

2 Fundamentals 5

2.1 Electric vehicle battery systems and cells 5

2.1.1 Packaging and energy density 5

2.1.2 Fast charging 6

2.1.3 Lifetime and aging 7

2.2 Thermal management in battery systems 9

2.2.1 Classification of thermal management systems 9

2.2.2 Tab cooling 10

2.3 Design and simulation of battery cells and systems 11

2.3.1 Simulation of battery cells 11

2.3.2 Simulation and optimization of battery systems 16

2.4 Meta-modeling using artificial neural networks 17

2.4.1 Multilayer feedforward neural networks 18

2.4.2 Learning process 19

2.4.3 Hyperparameter optimization 21

2.5 Mathematical fundamentals 22

2.5.1 Latin hypercube sampling 22

2.5.2 Pearson correlation coefficient 23

2.5.3 Error measures 23

3 Simulation models and experimental setup 25

3.1 Overall modeling approach 25

3.2	Electrochemical-thermal cell model	29
3.3	Equivalent circuit cell model	33
3.4	Tab-cooled battery module prototype	37
3.4.1	Design of the module with tab cooling	37
3.4.2	Experimental setup of the tab cooling tests	38
3.4.3	Simulation model	39
3.5	Generic battery module model	44
3.5.1	Generic design	44
3.5.2	Simulation model	45
3.5.3	Thermal cell meta-model	50
3.5.4	Optimization procedure	57
4	Results	61
4.1	Tab-cooled battery module prototype	61
4.1.1	Results of the tab cooling tests	61
4.1.2	Validation of the simulation model	63
4.1.3	Analysis plastic thermal conductivity	65
4.2	Optimization with the generic battery module model	67
4.2.1	Computing performance	67
4.2.2	Results scenario 1	68
4.2.3	Results scenario 2	71
4.3	Discussion	74
5	Summary and outlook	77
A	Appendix	81
A.1	ECM parameters	81
A.2	Material parameters	91
A.3	Hyperparameters during neural network optimization	95
	Nomenclature	97
	Bibliography	107
	List of own and co-authored publications	121
	Supervised student theses	125
