Abstract..... i

Kurzfassung ii

Acknowledgements iii

Figures..... ix

Tables xv

Abbreviations xviii

1 Introduction..... 1

1.1 Motivation 1

1.2 Limitations of Existing Research 2

1.3 Delimitation of the Research Problem 3

1.4 Research Question and Goals 3

1.5 Scope of the Thesis 3

1.6 Structure of the Thesis..... 5

2 Terminological Foundations and Requirement Derivation 8

2.1 Social Robots..... 8

2.1.1 Current Application of Social Robots..... 10

2.1.2 Usability, User Experience and Design Strategies for Social Robots..... 13

2.1.3 Multimodal Communication for Social Robots..... 14

2.2 Design Patterns 16

2.2.1 Origin and Purpose of Design Patterns 16

2.2.2 Pattern Approaches for Interaction Design 17

2.2.3 Design Documents in Practical Robot Programming..... 19

2.2.4 Identifying Patterns..... 20

2.2.5 Special Qualities of Patterns as Design Recommendations 20

2.2.6 Synopsis: From HCI Design Patterns to HRI Design Patterns 22

2.3 Requirements for a Pattern Approach in Social HRI Design 24

3 Review of Existing Approaches to Creating Reusable Expressions for Robots..... 26

3.1 HRI Design Patterns 26

3.2 Pamini Framework..... 27

3.3 BonSAI Framework..... 28

3.4	Robot Behavioral Toolkit	29
3.5	RoVer Authoring Tool	29
3.6	Geppetto Authoring Tool	30
3.7	ROS Engagement Stack	31
3.8	Interaction Design Patterns (IDPs) to support Children with Cancer	32
3.9	Summary of Approaches and Research Gaps	33
4	SHAPE_HRI: Approach to Social Behavioral Pattern Design for Human-Robot Interaction	34
4.1	Components of the Approach	35
4.2	Target Groups of the Approach	36
5	Design Process and Tools for Behavioral Pattern Design	37
5.1	Analysis: Specifying Communication Goals for Recurring Interaction Steps	38
5.1.1	Step A: Decomposing HRI Use Cases into User Intentions and Robot Responsibilities	39
5.1.2	Step B: Identifying Recurring Robot Interaction Steps	42
5.1.3	Step C: Specifying a Communication Goal for Each Step	43
5.1.4	Summary of Analysis Phase and Result	44
5.2	Creation: Developing Reusable Multimodal Behavioral Expressions	45
5.2.1	Step D: Collecting and Documenting Insights and Best Practices for Expressing a Communication Goal	47
5.2.2	Step E: Gathering Ideas for Suitable Communication Modalities Based on the Collected Insights	50
5.2.3	Step F: Creating Concrete, Suitable Multimodal Behavioral Expressions for Social Robots	51
5.2.4	Summary of Creation Phase and Result	56
5.3	Evaluation: Iteratively Improving Developed Behavioral Expressions	57
5.3.1	Step G: Prototyping Tangible, Testable Instantiations of the Behavioral Expressions	58
5.3.2	Step H: Gathering User Feedback on the Behavioral Expressions	58
5.3.3	Step J: Improving Initial Behavioral Expressions	62
5.3.4	Summary of Evaluation Phase and Result	64
6	Formal Pattern Notation	65
6.1	Pattern Structure and Components	65
6.2	Documenting Results from the Design Process as Patterns	68
7	Pattern Language	70
7.1	Pattern Types	70
7.1.1	Atomic Patterns	71

7.1.2	Composed Patterns	71
7.1.3	General Patterns	72
7.2	Pattern Relations	74
7.2.1	Relation needs	75
7.2.2	Relation extends	75
7.2.3	Relation is opposed to	76
7.2.4	Relation matches	76
7.2.5	Connective Relation AND	76
7.2.6	Connective Relation OR	77
8	Using SHAPE_HRI patterns in HRI Design Workflows.....	78
8.1	The Robot Behavior Pattern Wiki: A Source for Conceptual Inspiration	79
8.1.1	Content and Architecture of the Pattern Wiki	79
8.1.2	Finding Patterns that Match Specific Design Goals	84
8.1.3	Finding Patterns Based on Pattern Type.....	85
8.2	From Generic Patterns to Robot-specific Implementations	85
9	Evaluation Plan.....	87
10	Evaluation Based on the Example Use Case “Playful Brain Training”	90
10.1	Research Questions	92
10.2	Creating Patterns for Health-Related Entertainment Tasks for Social Robots	93
10.2.1	Analysis of the Playful Brain Training Use Case	93
10.2.2	Creation of Patterns for the Playful Brain Training Use Case	97
10.2.3	Documenting the Patterns and Organizing them as a Pattern Language	104
10.3	Pattern Implementation on Two Different Robots	110
10.4	Evaluation of the Guidance for Pattern Generation	115
10.5	Evaluation of the Human-centered Approach of the Design Process	115
10.6	Evaluation of the Top-Down Pattern Generation	116
10.7	Evaluation of the Abstract and Specific Pattern Descriptions.....	117
10.8	Evaluation of the Appearance-Independent Application of the Patterns.	117
10.9	Evaluation of Multimodality as a Design Factor	118
11	Empirical Evaluation with End Users	119
11.1	Research Questions	119
11.2	Study Design, Method and Data Analysis.....	120
11.3	Evaluation of the Quality of the Patterns Produced by the Human-Centered Approach.....	121
11.4	Evaluation of the Iterative Refinement	123

11.5	Evaluation of the Extensibility of the Pattern Language.....	128
11.6	Discussion	129
12	Empirical Evaluation with HRI Practitioners	130
12.1	Research Questions.....	130
12.2	Study Design, Method and Data Analysis	131
12.3	Evaluation of the Use Case-Independent Application of the Patterns	134
12.4	Evaluation of the Easiness to Find the Patterns	135
12.5	Evaluation of the Structured Documentation of the Patterns	136
12.6	Evaluation of Multimodality of the Behavioral Design	136
12.7	Evaluation of the Explicit Recommendations.....	137
12.8	Evaluation of the Interdisciplinary Application of SHAPE_HRI	138
12.9	Opportunity Areas for Improving the SHAPE_HRI Patterns and the Pattern Wiki.....	139
12.10	Discussion	140
13	Summary of the Evaluation Results - Requirements and Evaluation Criteria Revisited.....	142
13.1	High Quality Design Process.....	142
13.2	Sustainable, Structured Documentation	144
13.3	Practical Application and Shared Design Language	145
14	Conclusion and Future Work	147
14.1	Conclusion	147
14.2	Future Work	147
15	Appendix.....	150
15.1	Modality Card Deck – Complete Set.....	150
15.2	Screenshots of the Pattern Wiki	154
15.3	Source Code for the SHAPE_HRI Software Development Kit (SDK).....	171
15.4	Patterns of the Pattern Collection for Health-Related Entertainment Tasks	185
15.5	Results of the Empirical Evaluation with End Users.....	209
16	References.....	222
