Modern Aspects of Quantitative Theory of Free-Radical Copolymerization

Semion I. Kuchanov
Polymer Department, Faculty of Chemistry, Lomonosov Moscow State University, Moscow, V-234, 119899, USSR

1 Introduction 3

2 Kinetic Models 6
2.1 Terminal and Penultimate Models 6
2.2 Consideration of Complexing 7
2.3 Other Models 8
2.4 Multicomponent Copolymerization 9

3 Statistical Problems of Copolymerization Theory 10
3.1 Copolymer Statistics Within the Framework of Simple Models . . 10
3.2 Copolymer Statistics Within the Framework of the Complex Participation Model 13
3.3 Different Methods for the Statistical Description of Binary Copolymers 15

4 Statistical Description of Multicomponent Copolymers 16
4.1 Sequence Distribution in Macromolecules 16
4.2 "Instantaneous" Chemical Distribution 17
4.3 A Simple Procedure Available for the Calculation of Multicomponent Copolymer Composition 20
4.4 Degenerated Systems 22
4.5 Azeotropy 23
4.6 Simplified Terminal Model of Multicomponent Copolymerization . 27
4.7 Copolymer Symmetry 28
4.8 Statistical Stationarity in Copolymer Description 29
4.9 Calculations Within the Framework of Models Other than the Terminal one 30

Advances in Polymer Science, Vol. 103
© Springer-Verlag Berlin Heidelberg 1992

5 Copolymerization Dynamics 30
5.1 Statistical Characteristics of the Copolymers Produced at High Conversions 30
5.2 The General Dynamic Theory of m-Component Copolymerization 35
5.3 Terpolymerization 40
5.4 Copolymerization of Four Monomers 45
5.5 The Dynamics of Systems Described by Models other than the Terminal one 50
5.6 Composition Inhomogeneity of the Multicomponent Copolymerization Products 52

6 Discrimination of the Kinetic Models and Estimation of Their Parameters 54
6.1 General Strategy 54
6.2 Reactivity Ratios Estimation Based on Copolymer Composition Data 57
6.3 Application of NMR and Discrimination of the Kinetic Models of Copolymerization 63

7 The Effect of Synthesis Conditions on Copolymer Properties 76
7.1 Binary Copolymers 76
7.2 Possibilities of Prediction of Some Properties of Multicomponent Copolymers 80

8 Polymerization in Continuous Flow Systems 86
8.1 Qualitative Pecularities of Continuous Copolymerization 86
8.2 Importance of Hydrodynamic Stirring 87
8.3 Multiplicity of the Steady-State Regimes 88
8.4 Binary Copolymerization 89

9 Conclusion 92

10 References 94

Dependence of Viscosity on the Composition of Concentrated Dispersions and the Free Volume Concept of Disperse Systems

L. B. Kandyrin, V. N. Kuleznev*
M. V. Lomonossov Institute of Fine Chemical Technology, 86 Vernadsky Prospect, 117571, Moscow, USSR

1 Introduction 105
1.1 The Widespread Use of Concentrated Dispersions 105
1.2 Types of Disperse Systems 105
1.3 Subjects Under Consideration 105
1.4 The Structure of the Survey 106

2 The Dependence of the viscosity of disperse systems on Concentration and Their Flow Theories 106
2.1 Phenomenological Approaches and Empirical Formulas 106
2.2 Theoretical Models 111
2.3 The Transition Region from Fluid to Solid-like Disperse systems . . 123

3 Viscosity of Molecular Systems and Free Volume Theories 124
3.1 Phenomenological Approaches 124
3.2 Theoretical Models 125
3.3 The Transition Region from Mobile to Glassy Systems 126

4 The Flow and Deformation of Concentrated Disperse Systems in the Light of Free Volume Concepts 127
4.1 Comparison of the Flow Theories of Disperse Systems with the Free Volume Theory 127
4.2 The Relationship Between Mechanical Properties and the Free Volume of Disperse Systems 130
4.3 The Mobility of Disperse System Particles and Its Change with the Free Volume 137
4.4 Determination of the Maximum Packing Fraction of Polydisperse Fillers and Optimization of the Composition of Composites 142
4.5 Structurally Similar Approaches 143

5 Conclusion 144

Glassy State Relaxation and Deformation in Polymers

T. S. Chow
Xerox Webster Research Center, 800 Phillips Road, 114-39D,
Webster, NY 14580, USA

1 Introduction 152

2 Glass Theory 152
2.1 Equation of Motion 152
2.2 Nonequilibrium State 156
2.3 Relaxation Time 157
2.4 Relaxation Spectrum 158

3 Glass Transition 160
3.1 Role of Chain Conformation 160
3.2 PVT Behavior 162
3.3 Stress-Induced Glass Transition 163

4 Viscoelastic Relaxation 165
4.1 Shift Factor 165
4.2 Creep Compliance 167
4.3 Dynamic Response 170
4.4 Low Temperature Physical Aging 172

5 Plastic Yield 174
5.1 Nonlinear Viscoelastic Relaxation 174
5.2 Effect of Physical Aging 176
5.3 Temperature Dependence 177
5.4 Effect of Stress Field 178

Advances in Polymer Science Vol. 103
© Springer-Verlag Berlin Heidelberg 1992

6 Polymer Composites 179
6.1 Composite Modulus 179
6.2 Yield Stress 181
6.3 Stress-Strain Relationship 183

7 Compatible Glassy Blends 185
7.1 Nonequilibrium Interaction 185
7.2 Yield Behavior 187

8 Conclusions 188
