Preface	v
I. Introduction	1
§ 1 Sequential statistical procedures	1
§ 2 Objectives of sequential analysis	2
§ 3 Historical remarks on the development of sequential analysis	4
§ 4 Examples of sequential procedures; purely sequential statistical decision procedures	6
§ 5 Objections to purely sequential statistical decision procedures	18
§ 6 Sequentially planned statistical procedures	19
II. Optimal sequential sampling plans	29
§ 1 Problems of optimal sampling	29
§ 2 Optimal sampling plans for finite horizon	32
§ 3 Existence of optimal sampling plans for general \mathcal{A}	35
§ 4 Optimal sampling plans for the Markov case	47
III. Sequentially planned tests; sequentially planned probability ratio tests	58
§ 1 Notation	58
§ 2 The iid case	60
§ 3 Sequentially planned probability ratio tests	61
§ 4 Algorithms for computing the OC- and ASC-function of SPPRT's in the iid case	69
§ 5 Remarks on the implementation of the algorithms; Examples	90
§ 6 Remarks on the comparison of the methods and on convergence-improvements for the BF-/EV- method	101
IV. Bayes-optimal sequentially planned decision procedures	105
§ 1 Introduction	105
§ 2 Bayes-procedures	107
§ 3 A posteriori-distributions	114
§ 4 Bayes-optimal sampling plans; Markov case	119
V. Optimal sequentially planned tests under side conditions	127
§ 1 Decision problems with side conditions	127
§ 2 Characterizations of optimal sequentially planned decision procedures	130
§ 3 Sequentially planned tests for simple hypotheses in the iid case	133
§ 4 The modified Kiefer-Weiss problem in the iid case	137
§ 5 Locally optimal sequentially planned tests in the dominated iid case	150
§ 6 Remarks on the monotonicity of the power functions of SPPRT's and GSPRT's	159

Appendix A: Mathematical models for sequentially planned sampling procedures	164
§ A.1 The concept of policies by Mandelbaum and Vanderbei	164
§ A.2 The concept of tactics by Krengel and Sucheston	172
§ A.3 The concept of decision functions by Washburn and Willsky	174
§ A.4 The concept of stopped decision models by Rieder	177
Appendix B: Implementation of the algorithms EV, BF and ILE; Diophantine Approximation	178
§ B.1 Listing of the modules	178
§ B.2 Diophantine approximation	194
Appendix C: References, Bibliography	199
Subject Index	206
