

# CONTENTS

<b>1. Introduction</b>	<b>1</b>
1.1. Preliminary Remarks, 1	
1.2. Conservative Single-Degree-of-Freedom Systems, 1	
1.3. Nonconservative Single-Degree-of-Freedom Systems, 3	
1.4. Forced Oscillations of Systems Having a Single Degree of Freedom, 6	
1.4.1. <i>Primary Resonances of the Duffing Equation</i> , 7	
1.4.2. <i>Secondary Resonances of the Duffing Equation</i> , 11	
1.4.3. <i>Systems with Quadratic Nonlinearities</i> , 14	
1.4.4. <i>Multifrequency Excitations</i> , 14	
1.4.5. <i>Self-Sustaining Systems</i> , 17	
1.5. Parametrically Excited Systems, 20	
1.6. Systems Having Finite Degrees of Freedom, 26	
1.7. Continuous Systems, 30	
1.8. Traveling Waves, 35	
<b>2. Conservative Single-Degree-of-Freedom Systems</b>	<b>39</b>
2.1. Examples, 39	
2.1.1. <i>A Simple Pendulum</i> , 39	
2.1.2. <i>A Particle Restrained by a Nonlinear Spring</i> , 40	
2.1.3. <i>A Particle in a Central-Force Field</i> , 40	
2.1.4. <i>A Particle on a Rotating Circle</i> , 41	
2.2. Qualitative Analysis, 42	
2.3. Quantitative Analysis, 50	
2.3.1. <i>The Straightforward Expansion</i> , 51	
2.3.2. <i>The Lindstedt-Poincaré Method</i> , 54	
2.3.3. <i>The Method of Multiple Scales</i> , 56	
2.3.4. <i>The Method of Harmonic Balance</i> , 59	
2.3.5. <i>Methods of Averaging</i> , 62	
2.4. Applications, 63	
2.4.1. <i>The Motion of a Simple Pendulum</i> , 63	

x CONTENTS

2.4.2. <i>Motion of a Current-Carrying Conductor</i> , 67	
2.4.3. <i>Motion of a Particle on a Rotating Parabola</i> , 72	
Exercises, 77	
<b>3. Nonconservative Single-Degree-of-Freedom Systems</b>	<b>95</b>
3.1. Damping Mechanisms, 95	
3.1.1. <i>Coulomb Damping</i> , 95	
3.1.2. <i>Linear Damping</i> , 96	
3.1.3. <i>Nonlinear Damping</i> , 96	
3.1.4. <i>Hysteretic Damping</i> , 97	
3.1.5. <i>Material Damping</i> , 100	
3.1.6. <i>Radiation Damping</i> , 100	
3.1.7. <i>Negative Damping</i> , 103	
3.2. Qualitative Analysis, 107	
3.2.1. <i>A Study of the Singular Points</i> , 110	
3.2.2. <i>The Method of Isoclines</i> , 117	
3.2.3. <i>Liénard's Method</i> , 118	
3.3. Approximate Solutions, 119	
3.3.1. <i>The Method of Multiple Scales</i> , 120	
3.3.2. <i>The Method of Averaging</i> , 121	
3.3.3. <i>Damping Due to Friction</i> , 122	
3.3.4. <i>Negative Damping</i> , 129	
3.3.5. <i>Examples of Positively Damped Systems Having Nonlinear Restoring Forces</i> , 131	
3.4. Nonstationary Vibrations, 136	
3.4.1. <i>Conservative Systems</i> , 139	
3.4.2. <i>Systems with Nonlinear Damping Only</i> , 141	
3.5. Relaxation Oscillations, 142	
Exercises, 146	
<b>4. Forced Oscillations of Systems Having a Single Degree of Freedom</b>	<b>161</b>
4.1. Systems with Cubic Nonlinearities, 162	
4.1.1. <i>Primary Resonances</i> , $\Omega \approx \omega_0$ , 163	
4.1.2. <i>Nonresonant Hard Excitations</i> , 174	
4.1.3. <i>Superharmonic Resonances</i> , $\Omega \approx \frac{1}{3} \omega_0$ , 175	
4.1.4. <i>Subharmonic Resonances</i> , $\Omega \approx 3\omega_0$ , 179	
4.1.5. <i>Combination Resonances for Two-Term Excitations</i> , 183	
4.1.1. <i>Simultaneous Resonances: The Case in Which <math>\omega_0 \approx 3\omega_1</math> and <math>\omega_0 \approx \frac{1}{3} \Omega_2</math></i> , 188	
4.1.7. <i>An Example of a Combination Resonance for a Three-Term Excitation</i> , 192	

4.2. Systems with Quadratic and Cubic Nonlinearities, 195	
4.2.1. <i>Primary Resonances</i> , 196	
4.2.2. <i>Superharmonic Resonances</i> , 198	
4.2.3. <i>Subharmonic Resonances</i> , 199	
4.2.4. <i>Combination Resonances</i> , 201	
4.3. Systems with Self-Sustained Oscillations, 203	
4.3.1. <i>Primary Resonances</i> , 204	
4.3.2. <i>Nonresonant Excitations</i> , 209	
4.3.3. <i>Superharmonic Resonances</i> , 211	
4.3.4. <i>Subharmonic Resonances</i> , 214	
4.3.5. <i>Combination Resonances</i> , 216	
4.4. Nonstationary Oscillations, 219	
4.5. Nonideal Systems, 224	
Exercises, 234	
<b>5. Parametrically Excited Systems</b>	<b>258</b>
5.1. Examples, 260	
5.1.1. <i>A Pendulum with a Moving Support</i> , 260	
5.1.2. <i>A Mechanical-Electrical System</i> , 261	
5.1.3. <i>A Double Pendulum</i> , 262	
5.1.4. <i>Dynamic Stability of Elastic Systems</i> , 264	
5.1.5. <i>Stability of Steady-State Solutions</i> , 270	
5.2. The Floquet Theory, 273	
5.2.1. <i>Single-Degree-of-Freedom Systems</i> , 273	
5.2.2. <i>Multidegree-of-Freedom Systems</i> , 279	
5.3. Single-Degree-of-Freedom Systems, 283	
5.3.1. <i>Hill's Infinite Determinant</i> , 284	
5.3.2. <i>The Method of Strained Parameters</i> , 286	
5.3.3. <i>The Method of Multiple Scales</i> , 290	
5.3.4. <i>Hill's Equation</i> , 295	
5.3.5. <i>Effects of Viscous Damping</i> , 300	
5.3.6. <i>Nonstationary Excitations</i> , 302	
5.4. Linear Systems Having Distinct Frequencies, 304	
5.4.1. <i>The Straightforward Expansion</i> , 305	
5.4.2. <i>First-Order Expansions</i> , 307	
5.4.3. <i>Second-Order Expansions</i> , 310	
5.4.4. <i>Lateral Vibrations of a Column Produced by a Follower Force</i> , 317	
5.4.5. <i>Effects of Viscous Damping</i> , 320	
5.5. Linear Systems Having Repeated Frequencies, 321	
5.5.1. <i>The Case of <math>\omega</math> Near <math>2\omega_1</math></i> , 323	

5.5.2. <i>The Case of <math>\omega</math> Near <math>\omega_1 + \omega_3</math></i> , 325	
5.5.3. <i>The Case of <math>\omega</math> Near <math>\omega_1</math></i> , 328	
5.6. Gyroscopic Systems, 331	
5.6.1. <i>The Nonresonant Case</i> , 334	
5.6.2. <i>The Case of <math>\omega</math> Near <math>2\omega_n</math></i> , 335	
5.6.3. <i>The Case of <math>\omega</math> Near <math>\omega_2 - \omega_1</math></i> , 336	
5.7. Effects of Nonlinearities, 338	
5.7.1. <i>The Case of Quadratic Damping</i> , 341	
5.7.2. <i>The Rayleigh Oscillator</i> , 342	
5.7.3. <i>The Duffing Equation with Small Damping</i> , 343	
Exercises, 348	
<b>6. Systems Having Finite Degrees of Freedom</b>	<b>365</b>
6.1. Examples, 368	
6.1.1. <i>The Spherical Pendulum</i> , 368	
6.1.2. <i>The Spring Pendulum</i> , 369	
6.1.3. <i>A Restricted Ship Motion</i> , 370	
6.1.4. <i>Self-Sustaining Oscillators</i> , 374	
6.1.5. <i>The Stability of the Triangular Points in the Restricted Problem of Three Bodies</i> , 375	
6.2. Free Oscillations of Systems Having Quadratic Nonlinearities, 379	
6.2.1. <i>The Nonresonant Case</i> , 380	
6.2.2. <i>The Resonant Case (Internal Resonance)</i> , 381	
6.3. Free Oscillations of Systems Having Cubic Nonlinearities, 387	
6.3.1. <i>The Nonresonant Case</i> , 390	
6.3.2. <i>The Resonant Case (Internal Resonance)</i> , 391	
6.4. Free Oscillations of Gyroscopic Systems, 395	
6.5. Forced Oscillations of Systems Having Quadratic Nonlinearities, 402	
6.5.1. <i>The Case of <math>\Omega</math> Near <math>\omega_2</math></i> , 402	
6.5.2. <i>The Case of <math>\Omega</math> Near <math>\omega_1</math></i> , 409	
6.5.3. <i>The Case of Nonresonant Excitations</i> , 412	
6.5.4. <i>The Case of <math>2\Omega</math> Near <math>\omega_1</math></i> , 413	
6.5.5. <i>The Case of <math>\Omega</math> Near <math>\omega_1 + \omega_2</math></i> , 414	
6.6. Forced Oscillations of Systems Having Cubic Nonlinearities, 417	
6.6.1. <i>The Case of <math>\Omega</math> Near <math>\omega_1</math></i> , 419	
6.6.2. <i>The Case of <math>\Omega</math> Near <math>\omega_2</math></i> , 421	
6.7. Parametrically Excited Systems, 424	
6.7.1. <i>The Case <math>\Omega</math> Near <math>2\omega_1</math></i> , 425	

6.7.2. <i>The Case <math>\Omega</math> Near <math>2\omega_2</math></i> , 427	
6.7.3. <i>The Case <math>\Omega</math> Near <math>\omega_1 + \omega_2</math></i> , 430	
Exercises, 430	
<b>7. Continuous Systems</b>	<b>444</b>
7.1. Beams, 447	
7.1.1. <i>General Introduction</i> , 447	
7.1.2. <i>Governing Equations for the Case <math>u = 0(w)</math></i> , 450	
7.1.3. <i>Governing Equation for the Case <math>u = 0(w^2)</math></i> , 452	
7.2. Coupled Longitudinal and Transverse Oscillations, 455	
7.3. Hinged-Hinged Beams, 460	
7.3.1. <i>Primary Resonances</i> , 461	
7.3.2. <i>Superharmonic Resonances</i> , 463	
7.3.3. <i>Subharmonic Resonances</i> , 465	
7.3.4. <i>Combination Resonances</i> , 467	
7.4. Hinged-Clamped Beams, 469	
7.4.1. <i>Primary Resonances, The Case of <math>\Omega</math> Near <math>\omega_1</math></i> , 470	
7.4.2. <i>Primary Resonances, The Case of <math>\Omega</math> Near <math>\omega_2</math></i> , 472	
7.4.3. <i>Superharmonic Resonances</i> , 478	
7.4.4. <i>Combination Resonances</i> , 480	
7.5. Strings, 485	
7.5.1. <i>Governing Equations</i> , 487	
7.5.2. <i>Primary Resonances</i> , 491	
7.5.3. <i>Stability of Possible Solutions</i> , 495	
7.6. Plates, 500	
7.6.1. <i>Governing Equations</i> , 501	
7.6.2. <i>Forced Symmetric Response of Circular Plates</i> , 507	
Exercises, 519	
<b>8. Traveling Waves</b>	<b>544</b>
8.1. Longitudinal Waves Along a Bar, 545	
8.1.1. <i>Hyperbolic Equations and Characteristics</i> , 546	
8.1.2. <i>The Method of Multiple Scales</i> , 555	
8.1.3. <i>Shock Fitting by Using Velocity</i> , 564	
8.1.4. <i>Shock Fitting by Using Displacement</i> , 567	
8.1.5. <i>Effect of Heterogeneity</i> , 568	
8.1.6. <i>Finite Uniform Bars</i> , 571	
8.1.7. <i>Finite Heterogeneous Bars</i> , 576	

xiv CONTENTS

8.2. Transverse Waves Along a Beam on Elastic Foundation, 583	
8.2.1. <i>A Nonlinear Parabolic Equation</i> , 584	
8.2.2. <i>Monochromatic Waves and their Stability</i> , 588	
8.2.3. <i>Modulational Stability</i> , 590	
8.2.4. <i>Modulational Instability</i> , 593	
8.2.5. <i>Nonlinear Coupled Parabolic Equations</i> , 595	
8.2.6. <i>Interaction of Stationary Waves</i> , 599	
Exercises, 601
